RESOLUTION ON THE ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, FOR THE YEAR 1898-99.

FINANCIAL DEPARTMENT.—MISCELLANEOUS.

Darjeeling, the 1st July 1899.

RESOLUTION—No. 3854Mis.

READ—

The Report of the Royal Botanic Garden, Calcutta, for the year 1898-99.

Read again—

The Report of the Royal Botanic Garden, Calcutta, for the year 1897-98, with the Resolution recorded thereon.

THE weather during the year was more normal than that of the preceding two years. The show of orchids regained its old standard of excellence, though, owing to the reduction in the stock caused by the unfavourable weather of several successive seasons of drought, and the increasing difficulty in replacing losses from forests which have lately been too thoroughly exploited, the actual number of plants in the conservatories was considerably smaller than in past years. During the year the gardens were improved by extensive repairs to the river bank and repairs to the Roxburgh Avenue were also taken in hand.

2. Especial attention was, as usual, given to the cultivation and distribution of plants of economic value. In connection with the question of rubber and guttapercha, it has been ascertained, after examination of the milky juice of species of Sideroxylon belonging to the natural family Sapotaceæ, that, though these species do not yield a true rubber, the material obtained from them might prove capable of being utilized for the various purposes for which guttapercha or India rubber is now employed. An interesting introduction to India

during the year was Polygala butyracea, an African species, which yields an excellent vegetable oil. The cultivation and the identification of living plants yielding Indian products of hitherto doubtful origin, to which subject a reference was made in the last year's Resolution, were continued during the year with good results.

3. The collection in the Herbarium was increased by 10,672 specimens, the chief donors being Sir W. Thiselton Dyer, Director of the Royal Gardens, Kew; the Director, Rijk's Herbarium, Leiden; Mr. Heer Buysmann, of Middleburg, Holland; Mr. Medley Wood, Natal; Professor Schinz, of Zurich; and Mr. Herr Schlecheter, Berlin. Collections of Australian and Swiss plants were received respectively from the Government Botanist, Melbourne, and the Director of the Cantonal Museum, Fribourg; while collections of plants from the Eastern and Southern United States and from Mexico were acquired by purchase. A very fine collection of Chinese plants was contributed by Dr. A. Henry and another fine collection of specimens from the Malay Peninsula and Borneo was forwarded by the Director of the Botanical Gardens, Singapore. From India, valuable contributions were made by Dr. A. G. Bourne, Madras; Mr. T. F. Bourdillon, Travancore; Mr. G. M. Woodrow, Poona; Captain C. J. Milne, Ali Masjid; Mr. Duthie, Director of the Botanical Department, Northern India; and Mr. J. S. Gamble, Director of the Imperial Forest School, Dehra Dun. Mr. R. Pantling contributed to the Herbarium a large collection of Sikkim orchids, and a very valuable collection of mosses from Coorg was obtained from Dr. T. L. Walker, of the Geological Survey. Interesting collections were made by native collectors in Assam, Burma, the Andamans and the Nicobars; while collections were also made during the year in Western Bengal by Lieutenant Gage, and in the Andamans and the Nilgiris by Major Prain. The number of named specimens distributed to other Herbaria was 7,185.

4. The decrease in the number of plants distributed is due to the large demand of two years ago for rhea plants having now been satisfied, and the satisfactory increase in the number of seeds distributed is due to the fact that it has lately become possible to obtain collections from Sikkim of seeds of Alpine species which were till recently unobtainable.

5. The Lloyd Botanic Garden at Darjeeling, which was in charge of Mr. W. A. Kennedy, suffered greatly from the heavy snowfall which took place in the latter part of January 1899. Considerable damage was done to many of the exotic trees, but the actual deaths were fortunately very few. A portion of the ground which was formerly known as the Municipal vegetable garden, was transferred to the Eden Sanitorium, and has been included in the ground of the Lloyd Botanic Garden.

6. The thanks of the Lieutenant-Governor are due to Major Prain for the constant and zealous care he has given to the Gardens.

By order of the Lieutenant-Governor of Bengal,

E. W. COLLIN,

Offg. Secy. to the Govt. of Bengal.

ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, FOR THE YEAR 1898-99.

No. 20G., dated Royal Botanic Garden, Sibpur, the 25th May 1899.

From—MAJOR D. PRAIN, M.B., F.R.S.E., F.L.S., I.M.S., Superintendent, Royal Botanic Garden, Calcutta,

To—The Secretary to the Government of Bengal, Financial Department

I HAVE the honour to submit herewith the 112th Annual Report of the Royal Botanic Garden, Calcutta, for the year 1898-99.

ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, FOR THE YEAR 1898-99.

THE weather of the past year has been more nearly normal than that of the two preceding seasons, and the bad effects of scanty rainfall detailed in three successive reports do not on this occasion have to be recorded. The show of orchids this season regained its old standard of excellence, although the actual number of plants in the conservatories was considerably smaller than in years gone by. This was due to the reduction in the stock of plants caused by the unfavourable weather of several successive seasons of drought. At the same time, it is becoming year by year more difficult to replace by fresh collections those plants that succumb, owing to the reckless way in which the forests of Sikkim, Assam and Burma have been denuded of their orchids by unintelligent collectors, and it is found that a depleted stock is now only to be made up with great difficulty and at a considerable outlay. The chief improvements effected during the year consisted of rather extensive repairs to the river-bank from the pumping-engine station westwards. Towards the end of the year the Roxburgh Avenue, which was urgently in need of thorough repair, was taken in hand, and it was found possible before the close of the official year to practically complete the necessary earthwork. The want of the requisite funds made it impossible to metal the road within the year under review; this will be done during the ensuing rainy season.

2. *Economic plants.*—Especial attention was as usual given to plants of economic importance, numbers of rhea, rubber and other useful plants being freely distributed. In connection with the question of rubber and gutta-percha samples of the milky juice of species of *Siaeroxylon* belonging to the natural family *Sapotaceæ* were sent for examination to Professor Dunstan of the Imperial Institute, London. It is possible that, though these species do not yield a true rubber, the material obtained from them, which more closely resembles guttapercha than India-rubber, may prove capable of being utilized for various purposes for which it is at present necessary to employ gutta-percha or India rubber. An interesting introduction to India during the year was *Polygala butyracea*, an African species which yields an excellent vegetable oil. For the gift of a supply of its seed thanks are due to Professor E. Heckel of the Colonial Museum, Marseilles, who has made a careful study of the plant and its product. The cultivation and, on their coming into flower and fruit, the identification of living plants yielding Indian products of hitherto doubtful origin, on behalf of the Reporter on Economic Products with the Government of India and on behalf of the Central Indigenous Drugs Committee, have been continued with good results throughout the year. During the year samples of sugarcane affected by disease were submitted for examination from various parts of the Madras Presidency and from almost every district in the Lower Provinces. The reports on these various samples are in the hands of the officers in charge of the Agricultural Departments of these provinces.

3. *Herbarium.*—The work of this Department was carried on as usual during the year; the number of named specimens distributed to other Herbaria was 7,185. The work of distribution was considerably interfered with, owing to my having to labour single-handed till 20th June 1898, when Lieutenant Gage took over charge of the post and duties of Curator of the Herbarium, and again owing to my absence on deputation from 6th January 1899 till 20th February 1899. The number of specimens contributed reached 10,672, many of the collections received being of special interest and value. From Sir W. Thiselton-Dyer, Director of the Royal Gardens, Kew, the Director, Rijk's Herbarium, Leiden and Heer Buysmann of Middleburg, Holland, interesting general collections were received. A collection of Australian plants was sent by the Government Botanist, Melbourne. Three American collections, from the Eastern and Southern United States respectively and from Mexico, were acquired by purchase, while small collections of North American plants were presented by the United States National Museum, Washington, and by Professor Fowler of Kingston, Ontario. Mr. Medley Wood of Durban, Professor Schinz of Zurich, and Herr Schlechter of Berlin, formerly of Cape Town, presented three interesting sets of South African plants. A very fine collection of Swiss plants was presented by the Director of the Cantonal Museum, Fribourg. The chief Asiatic acquisi-

tions were a large and very fine collection of Chinese plants made by Dr. A. Henry, Ssumao, and a smaller one from the same country sent by Captain Pottinger, R. A.; a fine collection of specimens from the Malay Peninsula and Borneo was also forwarded by the Director of the Botanical Gardens, Singapore.

The principal Indian contributions were a large collection of Sikkim orchids received from Mr. R. Pantling in order to complete the authentic sets of Sikkim orchids distributed last year; also a very valuable collection of mosses from Coorg made by Dr. T. L. Walker of the Geological Survey. This latter collection forms the subject of a special report by Dr. V. F. Brotherus of Helsingfors which is now being published in the *Records of the Botanical Survey of India*. Valuable contributions to the Herbarium were also made by Dr. A. G. Bourne and Mr. T. F. Bourdillon from the Pulney Hills and Travancore; by Mr. G. M. Woodrow from Poona; by Captain C. J. Milne from Ali Masjid; by Mr. J. F. Duthie Director of the Botanical Department, Northern India, and Mr. J. S. Gamble, Director of the Imperial Forest School, Dehra Dun, from the N.-W. Himalaya; by Mr. G. A. Gammie, from Sikkim. Interesting collections were made by native collectors in Assam, Burma, the Andamans and the Nicobars; while collections were also made during the year in Western Bengal by Lieutenant Gage, and in the Andamans and the Nilgiris by myself. Thanks are due to J. F. Severin, Esq., of Tingali Bam, who has kindly supervised the work of a native collector in the Jaboka Naga Hills; to Lieutenant Cruddas, S.C., who gave great assistance in the early part of the year to a native collector working in the Kachin Hills, and to E. H. Man, Esq., C.I.E., who kindly directs the work of a native collector in the Andamans and Nicobars. Captain A. R. S. Anderson, I.M.S., of Her Majesty's Indian Marine S.S. *Investigator*, has also kindly helped the Garden by taking a native collector with him during the time that the *Investigator* was engaged in a survey of the coasts of North Andaman.

4 *Botanical Publications*—The chief publications of the year have been *Descriptions of Some New Plants from the North-Eastern Frontiers of India*, by Sir G. King and myself, published in the *Journal of the Asiatic Society of Bengal; A Note on the Botany of the Kachin Hills North-East of Myitkyina*, by Captain Pottinger, R.A., and myself, published in the *Records of the Botanical Survey of India; On three new genera from the Kachin Hills*, by myself, published in *Scientific Memoirs by Medical Officers of the Army of India*, and *An account of Corydalis Persica*, by myself, published in the *Bulletin de l'herbier Boissier*.

5. *Library*.—The usual periodicals were added, and a number of books obtained, partly by purchase, partly in exchange for the *Annals of the Garden*. The library is steadily increasing in size, and it will be necessary to add considerably to the number of cabinets in which the books are placed.

6. *Interchange of plants and seeds*.—The details of the receipts and issues of plants and seeds during the year are fully given in Appendices I—IV. The further fall in the number of plants distributed as compared with 1897-9 (31,867 in place of 36,885) is due to the same cause as the fall noticed last year—a smaller demand for plants of rhea; less because of the renewed interest in this plant, which was noted in the report for 1896-97, having again died out, than because those who wish to grow the crop are now provided with a sufficiency of plants.

The number of packets of seeds received during the year was 1,161, practically the same as last year. The number distributed was, however, considerably increased (5,794 in place of 2,177). This satisfactory result is largely due to its having become possible to induce native collectors to again visit the higher valleys of independent Sikkim in search of seeds of Alpine species, which are highly valued in Europe and America, but which it has been impossible to obtain since the time of the Sikkim Expedition.

7. *Lloyd Botanic Garden*.—The proposal to transfer a portion of the ground formerly known as the municipal vegetable garden to the Eden Sanitarium, mentioned in the last annual report, has been carried into effect, and the amended boundary line between this patch and the Eden Sanitarium grounds has been duly indicated by boundary pillars. Fencing for the patch has been provided and to a large extent erected, and the laying out of the ground, so as to bring it into conformity with the Lloyd Garden

proper, is being actively proceeded with. The heavy snowfall which took place in the latter part of January 1899 did a considerable amount of damage to many of the exotic trees, their branches being broken by the weight of the snow. Fortunately, however, there are fewer actual deaths to record, as the result of the bitter weather, than might have been anticipated.

8. The budget allotments of money both for the Royal Botanic Garden and for the Lloyd Botanic Garden have been fully spent. The proceeds of sales of surplus plants and books, amounting to Rs. 805-10-6 for the Calcutta Garden and to Rs. 954-2 for the Lloyd Garden, were as usual paid into the Howrah and the Darjeeling treasuries respectively.

9. The post of Curator of the Herbarium, which was vacant at the commencement of the official year, was filled on 20th June by Lieutenant A. T. Gage, I.M.S., who on that date took over charge. Mr. Gage is an enthusiastic botanist, who has been excellently trained and has discharged the duties of his post efficiently. Mr. H. J. Davies, Assistant Curator of the Royal Botanic Garden, who was acting as Curator of the Garden at the commencement of the year was transferred to Allahabad on 6th August 1898, and his place as Acting Curator was taken by Mr. A. C. Hartless, third assistant, Government Cinchona Plantation, from that date till 9th November 1898, when Mr. G. T. Lane, who had been on furlough to Europe for eight months, resumed charge of the post. On the transfer of Mr. Davies to the North-West Provinces the vacant post of Assistant Curator was filled by the appointment thereto of Mr. G. H. Cave, fourth assistant, Government Cinchona Plantation. This transfer called for the immediate posting of the new probationer gardener, Mr. O. T. Hemsley, who reported his arrival on 13th October 1898 to the Government Cinchona Plantation as fourth assistant and necessitated the engagement of another probationer gardener in his place. The new probationer gardener, Mr. A. E. P. Griessen, reported his arrival on 11th January 1899. Besides Mr. Lane, who was, as above indicated, absent on furlough from the commencement of the official year till 9th November 1898, Mr. Cave availed himself of privilege leave from 10th March 1899 till 23rd March 1899, and I was myself absent on deputation from 6th January till 20th February. Mr. W. A. Kennedy has been in charge of the Lloyd Botanic Garden throughout the year. The office of the Botanic Garden has been under the charge of Babu G. C. Dutta.

10. The usual tabular statements (six in number) are appended.

RESOLUTION ON THE BUDGET ESTIMATES OF THE COMMISSIONERS OF THE PORT OF CALCUTTA FOR THE YEAR 1899-1900.

No. 1042Marine.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

Dated Calcutta, the 3rd June 1899.

RESOLUTION.

READ—

Letter No. 3025, dated the 28th March 1899, from the Vice-Chairman of the Commissioners of the Port of Calcutta, submitting, for sanction, the budget estimates of the Commissioners for the year 1899-1900.

SINCE last year the Commissioners are including in their estimates the receipts and charges on Capital Account in addition to the usual provisions in connection with Revenue Account.

REVENUE ACCOUNT.

2. A general summary of the estimates submitted by the Commissioners is subjoined.

RECEIPTS.	Estimate for 1899-1900.	Estimate for 1898-99.
1	2	3
	Rs.	Rs.
Part I.—Jetties	16,04,750	16,39,750
„ II.—Inland Vessels Wharves	5,11,000	5,16,000

Deduct—Estimated expenditure as above	...	64,92,919
Estimated probable balance on 31st March 1900		7,92,491

RECEIPTS.

2. *Part I.—Jetties.*—The receipts are estimated at Rs. 35,000 less than those of 1898-99. The decrease is based on actuals.

3. *Part II.—Inland Vessels Wharves.*—The receipts are taken at Rs. 5,000 less than those of last year's estimate. The decrease is based on actuals.

4. *Part III.—Strand Bank Lands.*—The earnings are estimated at Rs. 1,66,994, the same as last year's.

5. *Part IV.—Port or Harbour Master's Department.*—The receipts are estimated at Rs. 63,000 more than those of the previous year. The increase is mainly under the heads "Receipts from mooring hire" and "Receipts from Harbour Master's earnings," and is based on the actuals of last year.

6. *Part VI.—Railway.*—The earnings are estimated at Rs. 20,000 more than those of the previous year. The increase is under the head "Shalimar Branch Line," and is based on actuals.

7. *Part VII.—Port Approaches.*—The receipts are estimated at Rs. 41,750 more than those of the previous year. The increase is based on actuals.

8. *Part VIII.—Kidderpore Docks.*—The receipts are estimated as follows:—

		Rs.
Receipts from graving dock	...	1,50,000
Landing charges on imports	...	60,000
Shipping charges on exports	...	16,30,000
Rent and miscellaneous	...	30,000
Proportion of receipts for towing vessels by hopper barges	...	1,500
Total	...	18,71,500

There is an increase of Rs. 6,30,000 based on the shipping charges on exports, and a decrease of Rs. 1,00,000 on the landing charges on imports. There is a net increase of Rs. 5,40,000. This is due to the closure of the jetties to exports.

9. *Special Tolls.*—The receipts for the nine months from April to December 1898 amounted to Rs. 6,68,144, and it was anticipated that those for the next three months would be one-third of this amount, viz. Rs. 2,22,715. This gives a total of Rs. 8,90,859 for the whole year. The estimate for 1899-1900 has consequently been taken at Rs. 9,00,000.

EXPENDITURE.

10. *Part I.—Jetties.*—The estimated expenditure amounts to Rs. 12,65,941 against Rs. 11,71,481 of the previous year. The increase is mainly under the head "Working Expenses," and is based on actuals.

11. *Part II.—Inland Vessels Wharves.*—Under this head there is an increase of Rs. 39,886 as compared with the estimate of last year. The principal increase is under the head "Renewals and improvements." A provision of Rs. 5,800 has been made for pitching the river bank at Bagbazar and Bocooltollah; of Rs. 1,700 for metalling a new road at Chitpur; of Rs. 12,500 for constructing a pontoon for the police stage at Ahiritollah; and of Rs. 11,500 for filling a tank at Chaulgollah.

12. *Part III.—Strand Bank Lands.*—There is a decrease of Rs. 20,283 under this head as compared with last year's estimate. The principal decreases are under the heads "Repairs" and "Renewals and improvements."

13. *Part IV.—Harbour Master's Department.*—Under this head there is an increase of Rs. 18,645 as compared with the estimate of last year. "Repairs to boats, vessels, &c.," shows an increase of Rs. 5,000, due mainly

to provision having been made for repairing the tugs *Hetty* and *Rescue*. Under "Salaries" there is an increase of Rs. 4,864, due principally to a provision for increased establishment for the *Rescue*, which has been rendered necessary in consequence of the increased work which the vessel has now to perform. Under "Establishment, repairs, &c., for Moyapore magazine," an additional sum of Rs. 4,500 has been entered to meet the cost of extensive repairs to be done to the Moyapore magazine.

14. *Part VI.—Railway.*—Under this head there is an increase of Rs. 7,151. "Proportion of interest and Sinking Fund on loans" shows an increase of Rs. 2,342 on account of the necessary provision for interest and Sinking Fund on the debenture loans to be raised during the year under review. Under "Proportion of salaries of Traffic Department" there is an increase of Rs. 1,326, due to the strengthening of the establishment with a view to cope with increased work. Under "Working expenses" there is an increase of Rs. 5,000 due to the necessary provision for the renewal of a large number of sleepers.

15. *Part VII.—Port Approaches.*—There is an increase of Rs. 8,010 due mainly to increased provisions having been considered necessary under heads "Salaries of officers and crew" and "Working expenses."

16. *Part VIII.—Kidderpore Docks.*—The expenditure is estimated at Rs. 29,11,232 against Rs. 26,59,941 of last year. "Proportion of interest and Sinking Fund on Loans" shows an increase of Rs. 90,134 for the reason stated in paragraph 14. There is an increase of Rs. 1,14,335 in the "Salaries of Traffic Establishment" on account of increased provision having to be made for additional establishment. Under "Working expenses" there is an increase of Rs. 1,07,949 on account of the necessary arrangements made for coping with the increased work at the Docks.

CAPITAL ACCOUNT.

17. As stated in the opening paragraph, the estimates now before the Government take into account the receipts and charges under Capital. The receipts are estimated at Rs. 50,00,000, made up as follows:—

	Rs.	Total. Rs.
Contributions from Revenue	1,20,110	
Stock charged to works	5,00,000	
	6,20,110	
		6,20,110
Sale of land at Shalimar for the use of the Bengal-Nagpur Railway	10,10,500	
Less amount received during 1898-99 ...	5,00,000	
	5,10,500	
		5,10,500
Debenture loan	13,37,160	
Ditto or advanced by the Government	25,32,230	
	38,69,390	
		38,69,390
		50,00,000

18. In the estimate of expenditure the following works are stated to be "sanctioned and in progress," but which have not yet been formally approved by the Government:—

Works.	Estimated cost. Rs.
(1) Sidings, bunker coal depôt	66,800
(2) New boat entrance at Docks	1,21,157
(3) One additional salt gola to hold 12,000 tons, with boat wharves, stages, cranes and sidings	1,30,000
(4) Sheds at Docks for wheat, seed and tea consigned to the Docks without shipping order	2,75,960
(5) Improvement to Port Trust Railway	2,46,883
(6) Shalimar coal yard	11,50,000

The sanction of the Lieutenant-Governor to the first three items has been communicated in this Department's No. 65T.—Marine, dated 26th May 1899. The estimates for the remaining works are now before the Government of India, and the sanction of that Government will be communicated when received. Pending the sanction of that Government, it would be more correct to enter these works under the list of "proposed" works.

19. Subject to the above remarks, the Lieutenant-Governor, in pursuance of the powers vested in him by section 71 of Act III of 1890, approves of the estimate of income and expenditure of the Commissioners for the year 1899-1900.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Colonel*, R.E.,

Secy. to the Govt. of Bengal.

SYSTEM OF VERNACULAR EDUCATION IN BENGAL.

GENERAL DEPARTMENT—EDUCATION.

Darjeeling, the 1st July 1899.

RESOLUTION—No. 1921.

READ—

Proceedings of the Agricultural Conference held in the Department of Revenue and Agriculture at Simla on the 2nd, 3rd, 4th, 5th, 6th, and 7th October 1893.

Government of India's Resolution No. $\frac{15}{951}$, dated Simla, the 7th September 1895.

Government of India's Resolution No. $\frac{19}{98-1}$ of 20th September 1895.

Proceedings of an Agricultural Conference held in Calcutta on the 2nd, 3rd, and 6th January and 10th and 11th February 1896.

Government Order No. 692T.—R. of 30th June 1896, to the Director of Public Instruction, Bengal.

Government of India's Resolution No. $\frac{3}{39-1}$, dated the 20th March 1897.

Letter No. 4630, dated the 18th August 1897, from the Director of Public Instruction, Bengal.

Government Order No. 2679, dated 12th August 1898.

The Report of the Committee appointed to revise the subjects and text-books used in vernacular education in Bengal, received with the Director of Public Instruction's letter No. 2713, dated the 6th April 1899.

Read also—

A short report on the system of vernacular education in the Central Provinces by Alexander Pedler, Esq., F.R.S., received with the Director of Public Instruction's letter No. 477, dated 16th January 1899.

The final report of the Commission on Manual and Practical Instruction in Primary Schools under the Board of National Education in Ireland, dated the 25th of June 1898.

The question of remodelling the lines on which vernacular education in the Indian Empire has hitherto been based, has for a considerable time been exercising the most anxious consideration of both the Imperial and Local Governments, and it was more particularly in its relation to agriculture that this question engaged the attention of the fifth meeting of the Agricultural Conference held in the Department of Revenue and Agriculture at Simla on the 6th of October 1893. After considering the recommendations made by Dr. Voelcker in paragraphs 527 and 528 of his Report on the Improvement of Indian Agriculture, the following Resolutions were passed:—

Resolution I.—That in considering the question of agricultural education and progress, the Conference desire to express the opinion that it is most desirable to extend primary education among the agricultural classes.

Resolution II.—That, as a general rule, instruction in agriculture should be combined with the existing course of education, and not depend exclusively on separate special institutions.

Resolution III.—That it is most desirable that the Universities should recognize the Science of Agriculture as an optional subject in the course for a degree.

Resolution IX.—That, in the opinion of the Conference, education in the lower schools should be of such a practical character as to fit the pupils for technical pursuits including agriculture, as well as for literary and commercial pursuits.

Resolution X.—That the text-books used in schools should be written in the simplest language ordinarily understood by the people, and should be descriptive of subjects with which they are familiar; also that the use of pictorial lesson charts, illustrating familiar objects, should be encouraged.

Resolution XI.—That the system of training in normal schools should be adapted to qualify school teachers to give instruction of the character indicated in Resolution VIII.

Resolution XII.—That in each Province a Committee, in which agricultural officers should be included, should be convened at an early date for the consideration of the questions raised in the preceding resolutions.

The Governor-General in Council, after considering the recommendations of the Conference, and after correspondence with the Secretary of State,

determined, before enunciating finally the principles or policy to be adopted, to give Local Governments the opportunity of fully examining the various subjects dealt with by the Conference, and with a view to affording them every facility in their investigation, deputed Sir Edward Buck to attend a series of Provincial Conferences and explain the various issues under discussion and the different methods proposed or adopted in other provinces. It was explained that the Government of India believed that "greater success was to be expected from making instruction in the rudiments of agriculture part and parcel of the primary system of instruction in the country than from teaching it as a subject apart from the general educational programme, and that such general enlightenment and intellectual expansion of the agricultural classes, as would enable them to perceive for themselves the small reforms which are within their means and opportunities would be more likely to produce substantial results than special instruction in particular agricultural processes." It followed therefore that the educational question which was given to each Province to answer was not merely how to adapt education to the training of agriculturists, but how the plan of instruction should be so fashioned as to promote in the pupils taught the power of assimilating easily any kind of technical instruction.

2. This phase of the question was discussed at the meeting of the Bengal Provincial Conference held on the 6th of January 1896, and it was suggested that the course of science in primary and middle schools should be reconsidered and so graduated as to include at different stages branches of the elements of agriculture, care being taken to exclude words and ideas of which the pupils could have no understanding. Effect was to be given to this resolution by arranging for the introduction of a compulsory course of Elementary, Physical and Natural Science, including Zoology, illustrated as far as practicable by object-lessons, and the Director of Public Instruction was asked to report how he proposed to give effect to these suggestions. This he did in August 1897, and in March 1898 an impetus to the establishment of Agricultural education was given by the opening of the Agricultural classes at the Sibpur Engineering College. This was, however, only a scheme for a "Higher Agricultural Education" and still left the pupils of the vernacular schools unprovided for; and in August 1898 the Lieutenant-Governor called for proposals of a wider nature with a view to the introduction of a system of vernacular education designed more to develop the minds of the boys than to practice and strengthen their memories; and after indicating the points for consideration, referred the matter for careful discussion and report to a small Committee of Educational experts whose names are given in the margin. Their report—a record of singularly careful and thorough research—has now been received, and in it the Committee have shown how it is possible to adapt the principles accepted by the experience of Europe to the conditions of Indian vernacular education.

The changes recommended are changes which are of the most vital importance to the interests of education in Bengal, and before taking any action on the proposals made by the Committee, the Lieutenant-Governor considers it to be advisable to publish their report for general information, and invites any who may desire to do so to submit to Government on or before the 1st of October 1899, any criticisms he has to make on the proposals now before Government.

The view that the general principles on which the Committee base their recommendations to Government are such as will stimulate the intelligence of the scholars and lead to the material progress of the people of this Province, finds support from the success which has attended the introduction of modern methods and subjects of education in the Central Provinces. It would appear from Mr. Pedler's report that the first beginning was made in 1880, and though the progress made has been gradual, Drill, Drawing, Agricultural teaching, Physical science, Kindergarten, and Object-lesson teaching are all now recognised

features of the education given in vernacular schools in the Central Provinces. The increased interest with which the pupils accept the training provided for them has been manifest, and the result has been most beneficial both in the higher development of the intelligence of the pupils and in their discipline in school. Manual training was also introduced, and before it was omitted from the course of instruction (for reasons which Mr. Pedler believes to have been somewhat prematurely accepted), it had been sufficiently clearly demonstrated that its introduction in vernacular schools was not only possible, but suitable. Such statistics as are available on the subject go to corroborate the conclusion drawn by the Director from the numerous careful enquiries he made that the modern system can be introduced at no increase of cost to the State, and it is not an unsatisfactory feature of the Committee's proposals that the books the scholars would have to buy are cheaper than those of the present curriculum.

Since the report of the Committee was received, the Lieutenant-Governor has had brought to his notice the Final Report of the Commissioners* appointed to consider Manual and Practical Instruction in Primary Schools under the Board of National Education in Ireland. Part I of this work, which represents the continuous labour of two years and is based upon the evidence of the leading authorities in Great Britain, Sweden, Denmark, Germany, France, Switzerland, and Holland, is printed as an Appendix to this Resolution; and there could scarcely be a higher tribute to the thoroughness and ability which the Bengal Committee have brought to bear on the work entrusted to their charge than the close correspondence between their conclusions and those of the Irish Commission.

REPORT OF THE COMMITTEE APPOINTED TO REVISE THE SUBJECTS AND TEXT-BOOKS USED IN VERNACULAR EDUCATION IN BENGAL.

In obedience to the orders contained in the Government of Bengal's letter "Agriculture, No. 2679, dated Calcutta, 12th August 1898, from M. Finucane, Esq., C.S.I., Secretary in the General Department, to A. Pedler, Esq., F.R.S., Officiating Director of Public Instruction, Bengal," the members of the Committee therein named have the honour to submit the following report:—

The Committee consider that the orders in the Government letter have required them to submit proposals for remodelling practically the whole scheme of vernacular education in Bengal, especially with regard to the subjects which are taught in various classes of vernacular schools, and the manner in which instruction is given.

It is, indeed, pointed out in paragraph 6 of that letter that the introduction of the study of such branches as Agriculture, Natural History, Sanitation, and Physics as compulsory subjects into vernacular schools, which is one of the principal orders in the letter, will itself involve the question of the methods by which such instruction should be given. It is also an instruction to the Committee (paragraph 5) that the aim in making alterations in the present system of education should be "more to develop the minds of the boys than to strengthen their memories. The object in view is the training of the powers of observation and the development of the powers of hand and eye." And again in paragraph 6 it is stated: "The Lieutenant-Governor is further of opinion that elementary drawing should form a subject of instruction in all primary schools."

The Committee have, therefore, in their proposals made suggestions for revising on modern lines the General curriculum of the vernacular schools of all grades from the infant stage up to and including the middle vernacular stage.

2. Working on the principle that the development of the educational structure is very considerably dependent on the nature of its foundations, the Committee first earnestly considered whether the instruction which is now given in lower primary schools is of the type which is desired, and whether such education is not easily capable of being improved. The first stage of the present instruction in a *patsala* is for the children to be made to sit as still as they can, anything like activity being sternly repressed, while they have to repeat hour after hour ordinary multiplication and other tables for the purpose of committing them to memory. A more unnatural method of commencing the training of a child can hardly be imagined. Speaking generally, the lowest class of a lower primary school now works for about seven hours a day, of which one hour is given to learning the letters of the alphabet, etc., and one hour to

The present system.

instruction in writing, while the remaining hours (5 hours a day) are devoted entirely to the repetition of arithmetical tables and the revision of old lessons. In the next higher class the length of time devoted to reading and writing remains the same, but rather less time is devoted to repetition of tables and revision of old lessons, while European and Native Arithmetic and Mensuration (after the Native system) are here commenced. In the next higher, or the lower primary class most of the subjects remain as before, except that the repetition of multiplication-tables is dropped, while the reading of manuscript and a little Sanitation are taught.

General principles of the proposed changes.

3. Looking at this programme of work it can be seen how little the present system of education conforms to the principles formulated in the Government letter, which lays down in precise terms that the education required is intended "more to develop the minds of the boys than to strengthen their memories, and to train the powers of observation and develop the power of the hand and eye."

Hence it is clear that the orders of Government can only be carried out by making a drastic change in both methods and subjects, even from the very lowest or the infant stage of education.

* Report of the Committee of Council on Education for England and Wales, 1897-98, page 630.

4. The two leading principles which appear to be accepted in Europe as a sound basis for the education of early childhood are as follows*:—

(1) The recognition of the child's spontaneous activity, and the stimulation of this activity in certain well-defined directions by the teachers.

(2) The harmonious and complete development of the whole of the child's faculties. The teachers should pay special regard to the love of movement which can alone secure healthy physical conditions, to the observant use of the organs of sense, specially those of sight and touch, and to that eager desire of questioning which intelligent children exhibit. All these should be encouraged, under due limitations, and should be developed simultaneously, so that each stage of development may be complete in itself.

Kindergarten.

5. The principles which are here enunciated can, in the opinion of the Committee, only be fulfilled by the introduction of the methods originally put forward by Froebel, which are now known under the name of Kindergarten-training. The principles which underlie this system are well-known. By Kindergarten children are trained and not taught, in the ordinary acceptation of the word. They are trained so as to arouse a desire to *be* something, to *do* something, and to *know* something. The children are encouraged to feel that each one possesses a certain amount of innate power and capacity, the gradual development of which depends on the individual's own activity. They are led to see that eyes, ears, and hands all help in the acquiring of knowledge, and these are the channels through which all *first* knowledge is acquired. The teaching also develops all the sides of a child's nature. The games, marching and singing, of the Kindergarten system secure the healthy physical exercise and development so necessary to a growing child. The stories told to the children and the nature-teaching are so arranged as to develop the moral side of the child, and the habits which are formed of attention, of accurate observation and of thought, and the power to express thought concretely in form and in language, are most valuable intellectual and mental training. Another principle in Kindergarten-training is the recognition of the desire of almost every child to work, invent, or originate on its own account, and hence stress is always laid on the teaching of such subjects as drawing, modelling in clay, etc., which gives scope for such desires.

It is of course true that Kindergarten-training may be made an expensive and elaborate kind of education, but it is submitted that there is nothing in the above principles which necessitates any real expense, and that if the form of Kindergarten adopted is made suitable to the circumstances and local conditions of the pupils, little or no expenditure will be necessary. In India primary schools work at an expenditure of about a rupee per pupil per annum, and hence expensive or even moderately-priced gifts of Froebel cannot be provided in the primary schools of Bengal. The principles above enunciated must therefore be worked out on more or less new lines, and only the use of objects now found in almost every primary school will be necessary to carry out such teaching in the proposals made by the Committee.

Object-lessons.

6. Closely allied with the methods of Kindergarten-teaching is the so-called object-lesson teaching; indeed, the latter may almost be called a part of or possibly an extension of the former, as it is dependent on the same principles.

* See Circular No. 332, page 633 of the English Education Department for 1897-98.

* Object-lessons cannot be dispensed with in teaching, if habits of observation are to be duly fostered, and they should always be treated as a means for mental exercise and not merely as a method of imparting miscellaneous and even valuable information. To fulfil this purpose, however, objects must always be present and in sufficient numbers, and the chief aim should be to call into activity observation and the construction of clear mental pictures, so that the intelligence of pupils may be exercised and developed.

Teaching of Geography and History.

7. The principle of teaching by object-lessons appears capable of far greater extension than is frequently considered to be the case. Usually object-lessons are confined to the exhibition of a few natural substances, such as minerals, plants, etc., or to the pictures of a few animals, but the method can easily be extended. Thus, if a Geography lesson is taught by visible illustrations, and by actual modelling in sand and clay for the production of miniature rivers, hills, plains, mountains, etc., it really becomes an object-lesson. Tales from History, if graphically told and well illustrated by striking pictures, are almost equally object-lessons, while the facts of elementary science obviously form excellent subjects from this point of view.

Methods of teaching.

8. In order to carry out the principles laid down in the Government letter, which are those fully accepted by modern educationists, the Committee propose that the first years of a child's school-life should be devoted almost entirely to training the senses and the powers of observation. To effect this the Committee wish to introduce Kindergarten methods at the very commencement of education. These methods will be supplemented by object-lessons and drawing, with possibly a certain amount of action-songs in the infant stages. Having commenced the development of the senses and powers of observation in the lowest stage, it is then proposed to strengthen and develop the memory and reasoning powers, and to continue the training of the hand and eye, etc. It was also considered that training on Kindergarten principles should extend throughout the whole of the infant stage of education, that is, during the period when children are from about 5 to 7 years old. The Committee are of opinion that object-lessons should be a prominent part of the teaching of all classes up to and including the lower primary stage, and that the various subjects taught up to the upper primary stage should be treated as far as possible as object-lessons.

In the middle standard of education the necessity of teaching by the object-lesson method is perhaps not quite so pronounced, as proper habits of working will probably have been well established by the instruction up to the upper primary stage.

The training of the hand and eye by such work as Drawing has been considered to be essential throughout all stages of vernacular education, and in the case of the education of boys the Committee think this teaching should be supplemented at about the age of 8 by a little manual work in the form of leaf-manipulation, etc. In the case of girls this subject would be replaced by needlework. At ages above this the Committee consider the manual training should be broadened and extended up to certainly the middle vernacular standard.

Scientific teaching.

9. The Committee have carefully examined the list of elementary sciences which the Government have proposed to introduce into the curriculum of the schools, and they have accepted as feasible the Government proposals almost as they stand. They wish it, however, to be very distinctly understood that there is no intention of teaching or attempting to teach such subjects as Chemistry, Physics, Natural History, etc., *as sciences* to the children who attend the vernacular schools, but they wish to point out and make it quite clear that all that can be done is to present in a homely way some of the simpler and more important facts and truths of such sciences. These facts must be suited to the intelligence of children and taught in a more or less practical way, so that the facts may be assimilated and give food for observation, thought, and inference, and thus be a help to the children in their everyday lives later on. Really it would be more correct to designate the facts which are intended to be taught under the headings of Chemistry, Physics, Natural History, etc., as the "*Science of everyday life.*"

Physical training.

10. The Committee have also considered that if children are made, while at school, to work solely at their books or studies, only one part of what may be called a complete education is given. They believe that a true system of education should try to develop not only the powers of observation, the mental faculties, and the power of the hand and eye, but that no system can be called complete unless at the same time the physical powers are fostered and strengthened to the utmost possible extent.

It is specially the case with young children that, if they are kept for any length of time consecutively at book-work, they become listless and tired, and make little real progress. On the other hand, if book-lessons are alternated with lessons which require action and movement, then the children return to their books with renewed interest and vigour. For this reason the Committee consider it to be essential to introduce action-songs into the infant stage of teaching, elementary drill into the next higher stages, and drill and gymnastics for boys, or drill and calisthenics for girls into the remaining stages of vernacular education.

In the Central Provinces, for instance, an extremely complete system of drill and gymnastics has been introduced into the vernacular schools, and has been in force for several years. The pupils take very great interest in such exercises and they become most expert. They are smartly obedient to short words of command, and exhibit not only great skill in the exercises, but the excellent discipline which is now shown in these schools both in and out of class is an eloquent testimony to the mental discipline which a good system of drill enforces.

11. There appears to the Committee to be no necessity for them to defend in detail the introduction of any of the above subjects into vernacular education in Bengal. In

the case of Kindergarten-training, object-lesson teaching, drawing (hand and eye-training), needlework for girls, manual work, and drill, they are fully convinced of the necessity for their study, and they consider that there are no insuperable difficulties in the way of their introduction. The success which has attended the systems of education in Europe since the introduction of these subjects is in itself sufficient to prove their suitability. In the case of the science subjects, or what may be called the "Science of everyday life," it is proposed to introduce the facts required into the ordinary class readers, and hence these can scarcely be said to be new subjects, but rather an attempt to direct the reading work of the pupils to subjects which are of interest and importance to them in their everyday lives, instead of requiring them to read books which rarely contain any useful information, and are frequently of a very uninteresting nature.

The detailed scheme as recommended by the Committee.

12. As appendices to this report (Appendices A and B) two syllabuses are given. The first is the detailed statement of the subjects and the extent to which it is proposed to teach them in all the classes of the vernacular schools, while the second syllabus gives a condensed view of the detailed syllabus.

It will be convenient to note here some of the leading points of the syllabus. Free-hand drawing is introduced at the earliest stage and runs through the whole course. Manual training for boys, in the form of leaf-manipulation, paper-cutting and folding begins in the A class of the lower primary; as needlework for girls it begins in the third year of the infant class or class B of the lower primary. Drill for boys and girls runs through the whole course. Under the head of Reading, beginning with the A class of the lower primary, there is a list of science subjects which, without the explanation given in the next paragraph and in paragraph 9, may seem to impose too great a burden on the students, but on examination it will resolve itself into a simple reading course arranged as follows:—For boys in town schools, some elementary notions of the simplest facts and principles of Botany, Natural History, Hygiene, Physical Science, and Chemistry. For boys in country schools, a similar course, only with Agriculture substituted for Physical Science and Chemistry. For girls in both town and country a similar course of Botany, Natural History, and Domestic Economy only. The reader itself will be written in the most simple and comprehensible language, devoid of technicalities; and, to minimise the danger of the reading exercise degenerating into learning by rote, the different subjects up to Standard IV are to be illustrated and explained as far as possible by means of object-lessons.

The advantages of a course of Agriculture for village schools in Bengal need not be entered upon. Naturally this subject becomes of a more technical character than the other Science subjects, but at the same time it will be treated in a manner suitable for the age and understanding of schoolboys. In Standards V and VI practical work in a school garden is introduced. The syllabus for Standard IV of the subject "Writing" may be noticed in this connection, as a part of it has indirect reference to Agriculture. It was brought to the notice of the Committee that in very many cases raiyats unwittingly placed themselves in the power of money-lenders through absolute ignorance of the meaning of the documents to which they subscribed. The Committee, therefore, were of opinion, considering that they were providing a course of education mainly for the agricultural classes, that it would not be out of place to introduce as an exercise in Writing the forms of simple documents which are commonly used by raiyats. Mensuration will include a course of simple practical Geometry. In the two highest standards Euclid is introduced as an alternative subject only: in the present course it is compulsory. The subject of moral training will be considered in the selection of pieces for the literature book and in subject IX (Poetry).

13. As it may be objected that several new subjects are proposed to be introduced in the curriculum, it is well to state that the increase of the course is only nominal, for most of the new subjects are only in substitution for others which are now taught.

Thus, for instance, in the lower primary course, there are subjects in the present curriculum which partly or wholly go out in the new proposals.

Taking the case of the B and A standards of a lower primary class, corresponding to the two stages of infant training, the children will be practically relieved of the work in reading and also in learning multiplication-tables by rote. In their place the children will have to take up Kindergarten occupation and object lessons. In the lower primary class the time at present spent in reading and in working at the *Sarir Palan* (Science of Sanitation) will be devoted to studying the new primer for Standard I in what has been called the "Science of everyday life." The same remark which has just been made with reference to the lower primary class will almost hold good for all the classes above it, as it is proposed that the Science Readers which are to be prepared should be substituted for the ordinary reading books now used in the schools.

14. Again, writing is usually taught to the children in all the classes of vernacular schools at least an hour a day; it is proposed that a portion of this time, say, two hours a week, should be devoted to Drawing. Arithmetic, multiplication-tables, etc., are now taught at least 2 to 2½ hours a day, and in some classes for a much longer time. Under the new scheme the tedium of the children's work in the infant stages will be lightened, for the idea of numbers will be introduced during the Kindergarten and object-lesson work, when dealing with the leaves of trees, the fingers of the hand, etc., so that in the two lowest classes the Arithmetic will be more like systematised play than a serious study. It is also thought

that the learning of multiplication-tables should certainly be postponed to the second period or year of study of the infant stage. In the same way it is thought that the children should not learn the letters of the alphabet till the second year of tuition, while they will only commence their full course of reading and writing in the third year of study.

15. Again it may be remarked that in the present upper primary course the following subjects are taught:—Literature, Science, and Grammar, which may be considered to be replaced by the Science Reader. Writing is to be partly replaced in the new scheme by Drawing. The dry facts of History and Geography now taught in the upper primary schools are to be replaced by interesting Historical and Geographical Readers, which will also include stories with a moral tendency. Euclid, now taught in the two classes of the upper primary school will be replaced by Geometrical Drawing, and so on. Practically the only additional subjects in the proposed new courses will be Drill and Manual Training. These lessons must be really looked upon as a relaxation, and it is believed that, as is found to be the case in England, the introduction of these additional subjects will enable the other work of the school to be carried out more efficiently and expeditiously.

Hence it will be seen that the new scheme proposes to relieve the children of a considerable amount of tedious routine work, and to substitute for it lessons which will be at the same time more instructive and more interesting.

Time-tables.

16. The statements appended to this report (Appendices E to G) are time-tables giving the number of hours to be spent every week in each of the prescribed subjects in the different standards, for the lower primary, the upper primary, and the middle schools. With a view to diminish the pressure on the pupils at the infant stage, care has been taken to restrict school-work to 18 hours a week for the first stage, 24 hours for the second, and 25 hours for the third stage, while 27 hours have been assigned to both the first and second Standards. From the third to the sixth Standard the number of school hours has been fixed at 30, including four hours for drill and manual work, which, according to the experience gained elsewhere, afford marked relaxation from purely intellectual labour.

Date of introduction of the new scheme.

17. The Committee consider that though the syllabus of studies now put forward is based mainly on the existing capabilities of schools of different grades, it will be some time before it can be effectively taught in those institutions. They are of opinion that a period of two and-a-half years should be allowed to elapse, from the date of publication of the syllabus, for schools to adapt themselves to their altered requirements, and that the first examination for scholarships under the revised standards should be held in 1902. The Committee do not consider it expedient to recommend the partial introduction of these standards, either in particular localities or in particular grades of schools, at an earlier date, as the present system of scholarships embraces both urban and rural areas, which cannot be educationally severed from one another without the creation of practical difficulties. They therefore venture to recommend that all classes of vernacular schools be given notice at an early date that the examination for scholarships will be held under the new system from the year 1902. This recommendation is made on the assumption that the middle and upper primary examinations will continue to be held before the Durga Puja holidays, and the lower primary examination in November or December as at present.

Preliminaries to the introduction of the scheme.

18. The necessary preliminaries to the introduction of the new scheme will be three. First, the immediate introduction of teaching the new subjects into training-schools, so as to enable them to turn out rapidly teachers qualified to take up school work under the new system. Second, the training of Inspecting Pandits, Sub-Inspectors, and Deputy Inspectors of Schools, who will have to be familiarised with the methods of teaching now proposed to be adopted. They may be invited to see actual work under the syllabus in the training schools for a week or ten days, and with the help of the knowledge thus gained, they can be expected to aid the teachers in introducing the system Third, the preparation of manuals for the teachers and text-books for the students.

Teachers' Manuals and text-books.

19. Appendix C gives a statement of the books and manuals required under the proposed new scheme. They consist of two Teachers' Manuals, one Drill Book and the Drawing Books for the use of the teachers, and the following text-books to be purchased by students:—

For the Lower Primary.

One Reader and one Arithmetic Book.

For the Upper Primary.

One Science Primer.
One Historical, Geographical and Moral Reader.
One Arithmetic Book.

For the Middle Vernacular.

One Science Primer.
One Literature Book and Moral Reader.
One Historical and Geographical Reader.
One Arithmetic Book.
Euclid (alternative).

20. Referring first to the Manuals for Teachers, the Committee are of opinion that the necessity for them is sufficiently shown by the inefficiency which is to be found in the work of many teachers in primary and other schools in Bengal.

The *gurus* in many primary schools have never seen what good or proper teaching is like, and they have never received any instruction as to the best methods by which such teaching should be given. The Teachers' Manuals, which the Committee consider should be prepared at once, will deal with the work required to be done by a school-master, and indicate the nature of the subjects to be taught and the precise method by which the instruction should be given.

21. The vernacular education which is being dealt with in this report may really be divided into four stages—the Infant stage, the Lower and Upper Primary, and the Middle stages. In the Infant stage practically everything depends upon the teacher. It is therefore necessary to supply each of the lower primary *gurus* with a manual giving very full instructions as to how the teacher should conduct the training of the senses and how he should proceed with object-lessons, etc., which are detailed in the syllabus. This Manual, called the Junior Teachers' Manual, would also indicate more briefly how the remaining subjects up to the lower primary standard (*i.e.*, Standards I and II of the syllabus) are to be taught.

The second Manual for the senior teachers would go rather more fully into the methods of managing the classes of a school, into the methods of maintaining discipline, the methods of keeping school registers and accounts, the requirements as to cleanliness and sanitation in school-rooms and school-houses, and other matters of the same kind, and, in addition, it would explain in detail the principles upon which the teaching of the classes of an upper primary school should be conducted.

A few additional chapters dealing with the new subjects taught in the middle schools, and on a few other matters, would be sufficient to make this second book suitable for the use of teachers in middle schools, as well as for those in upper primary schools.

The subjects which are to be treated in the two Teachers' Manuals are given in detail in Appendix D.

Drawing books and Drill book.

22. The want of drawing examples for Indian schools has been supplied by a series of four books lately prepared under the supervision of the Superintendent of the Calcutta School of Art, by order of the Government of India. To make them more complete some additional examples are now being prepared, and it will only be necessary to arrange for a cheap edition of the whole series to make it suitable for use in primary and other schools in Bengal.

An excellent Drill book, published in Hindi, embodying the native form of gymnastic exercises, has been introduced into the Central Provinces schools with marked success. The Committee consider that the Drill book for schools in Bengal should be framed on similar lines.

23. The scope and method of the text-books required for the students are sufficiently indicated in the detailed syllabus. The number of pages to be allotted to each subject in the different standards and the selling prices of the books are given in Appendix C.

Method of procuring the text-books and manuals required.

24. It remains now to consider the best method of procuring the class of text-books and manuals required.

Two alternatives were considered by the Committee—

1st.—To rely on private enterprise.

2nd.—To depute official or non-official experts to prepare them, on suitable terms as to remuneration and adoption of the books by Government.

After much deliberation the Committee decided that the first course was preferable, as it would disarm much of the opposition and ill-feeling which was sure to be aroused among authors and publishers by the unavoidable interference with their vested interest in existing text-books, involved in the reorganisation of the present curriculum. Any attempt on the part of Government to create a monopoly in the preparation of the new books might easily give rise to a strong agitation against the whole scheme. Another advantage of throwing open to competition the work of preparing all the books required would be to relieve Government of the difficult and somewhat invidious task of nominating experts. It is clear that no single author can be an expert in all the subjects which are dealt with in the Science Primers. It would therefore follow that some one author must act as an editor of a book or series, employing experts to write sections of the work which he would incorporate in a Primer. Hence there would be a further and grave difficulty if it were decided that Government should undertake the preparation of the Science and other Readers.

The Committee therefore considered that the best course to follow would be to notify publicly the manuals and text-books required for the different classes of schools, the subject-matter and lines on which the books are to be drawn up being clearly specified, and to invite authors and publishers to submit works for the approval of a Committee to be hereafter nominated by Government. The books might be written in any vernacular used in Bengal, but a very full type-written summary of the contents in English should be submitted with each book. The authors or publishers, as the case might be, of the works selected would be

allowed to retain the copyright, but they would be required to undertake the printing and publishing on their own account. The maximum selling price is indicated in Appendix C. With regard to the text-books for students and the Teachers' Manuals, the Committee consider that the copyright of works selected, being a property of considerable value, would offer a sufficient inducement for authors and publishers to compete without any honoraria being given, but probably Government would have to give a guarantee that no changes would be made in the books for a certain time, perhaps for five years.

Financial effect of the scheme.

25. The financial effect of the scheme can as yet be estimated only approximately. The Committee are of opinion that the new standards of education can without difficulty be taught in the schools by the present masters. Hence no additional expenditure will be thrown on public funds from this cause. The Committee do not expect that at the outset the teaching in some of the new subjects will be very satisfactory, but, as suggested in paragraph 18, steps will be taken to gradually raise the standard of teaching. The Committee are convinced that the teaching of the new system cannot possibly be less satisfactory than the teaching at present carried on. With regard to other items of the cost of the new scheme, the Committee have come to the conclusion that the preparation of the text-books for the pupils as well as the two manuals for teachers should be left to private enterprise. If this recommendation be carried out, the cost to Government of the introduction of the scheme will be practically nothing except what is incurred in the publication of the Drawing books and the Drill book. District Boards and other local authorities will have to provide the lower and upper primary schools with copies of the Teachers' Manuals and the Drawing books and the Drill book. The total cost for each lower primary school will thus be about 10 annas, and for each upper primary school about 12 annas. The number of lower primary schools in these provinces being 43,483, and of upper primary schools 4,113, the local authorities will have to incur an expenditure of about Rs. 32,000 for supplying these books to the schools. As most of the lessons suggested in the syllabus deal with common objects, the Committee trust that the articles required will be secured by each school locally without any extra cost. A sum of 4 annas a year may, however, be put down as covering the entire cost of these articles for a lower primary school. In that case about Rs. 12,000 will have to be provided either by the school *gurus* or the villagers. In upper primary schools the annual cost may probably be a rupee, and in middle schools the expenditure may vary with the ability of the school to bear it.

26. It remains to be seen how the changes about to be introduced are likely to affect the students of the different grades of vernacular schools for whose benefit the Committee have endeavoured to revise the entire curriculum of studies. The number of pages of text-books gone through by a candidate for a middle scholarship under existing arrangements is about 1,400, and the cost of the books is about Rs. 6, while under the scheme here set forth the number of pages will be five to six hundred and the cost one rupee to one rupee eight annas. In addition to this, drawing appliances, costing about 8 annas to each pupil and one rupee to the school, will have to be provided. In respect of the Upper Primary scholarship class, the pages at present come up to 1,050 and their cost to about Rs. 2-13, while the new scheme reduces the pages to three hundred or three hundred and fifty, and their cost to eight to twelve annas or to perhaps a rupee, including drawing instruments. In the same way the Lower Primary scholarship class now has to go through 230 pages, the books costing about 10 annas, while the new scheme gives 140 pages, costing 6 annas. These figures give some idea of the relief which would be afforded to students of vernacular schools of different classes in respect of the burden of text-books and their cost to the pupils.

27. The Committee are of opinion that it will be time to discuss the question of assigning different values or marks to the separate subjects for the purposes of the different scholarship examinations when the Government have intimated their decision on the scheme embodied in the present report. The Committee, therefore, consider it premature to make any detailed proposals in respect of marking for the present.

The 6th April 1899.

APPENDIX A.

THE DETAILED SYLLABUS.

NOTE.—It is of the utmost importance that all objects which are used to illustrate the courses of instruction in vernacular schools should be selected from materials or things that are commonly found in every school, or which can be obtained in every village without difficulty and without cost. This rule applies to objects which are to be used for the training of the senses in the infant classes, and for object-lessons, etc., and also as far as possible to those used in the teaching of the science of every-day life.

INFANT CLASS.

THE following "Kindergarten" and "Object-lesson" subjects shall be prescribed for the first stage of instruction before the children are allowed to begin to learn their letters or to learn to read, &c.:—

FIRST PERIOD OF INFANT CLASS—ONE YEAR'S COURSE.

Age about 5 years.

A.—Kindergarten and Object-lessons for training children by observation or impressions obtained through the senses—

1. Through the eye—
   (*a*) Lessons on form.
   Curved lines.
   Lines, straight and crooked.
   Ball-shaped bodies.
   (*b*) Lessons on colour—
   Black and white substances.
   Yellow and red ditto.
   Blue and green ditto.
2. Through the hand—
   Things, hard and soft.
   „ rough and smooth.
   „ heavy and light.
   „ brittle and tough.
3. Through sense of taste—
   Things, sweet and sour.
   „ pungent or hot, sour, salt, and bitter.

B.—Object-lessons on things of every-day life, such as, a flat board or a piece of wood, a box, a stool or chair, a table or school desk; also very simple object-lessons about plants, growing and flowering, indicating the root, the stem, the leaves, the flowers, etc., and their simple uses, and showing that a plant must be watered for it to continue to live.

Very simple lessons about the human body—
Parts of the body—the head, arms, legs, hands and feet.
What the body is made of (bones and flesh).

C.—Training of hand and eye—
Drawing of curved, straight, and crooked lines.
Drawing of squares and oblongs, circles and figures like circles bounded by curved lines.

D.—Very simple lessons as to different kinds of animals—
Some animals walk only.
Ditto have 2, 4, and more legs.
Ditto crawl.
Ditto fly.
Ditto swim.
Ditto walk and fly.
Ditto ditto and swim.
Necessity of kindness to domestic animals.
Kindness of children to one another.

E.—From the object-lessons on the leaves of trees and on the hands and feet, etc., the idea of numbers can be readily introduced, and from numbers to addition, subtraction, and simple mental arithmetic.

F.—The children are to be allowed to learn to write the numerals about this stage.

G.—The children must be trained daily in simple physical exercises and in action songs.

H.—Kindergarten occupations such as stick-laying, etc.

SECOND PERIOD OF INFANT CLASS—ONE YEAR'S COURSE.

Age about 6 years.

A.—Training through the senses—

1. Through the eye—
   (*a*) Lessons on form—
   Extension of lessons given in first period.
   Also lessons on angles and on triangles of various shapes.
   Also lessons on cube and brick-shaped bodies.
   (*b*) Lessons on colour—
   Extension of lessons given in first period.
   Grey, orange, purple, brown.
2. Through the hand—
   Extension of lessons given in first period, showing various degrees of the properties then tested.
3. Through sense of taste—
   Extension of lessons given in first period.
4. Through the ear—
   Sounds, loud and soft.
   „ distant and near.
   „ pleasant and unpleasant.
   Different animals give different sounds.
   Sounds of pain, sounds of pleasure.
   Sounds give spoken language.
5. Through the organs of smell—
   Pure air has no smell.
   Air which has smell is not pure.
   Sweet or pleasant smells of flowers.
   Unpleasant smell of rotting or decaying vegetation.
   Unpleasant smell of rotting or decaying animal matter.
   Air with bad smell is unhealthy to breathe.
6. Lessons on size and measurement—
   Length, breadth, and thickness.
   Measures of length, both vernacular measures, and the yard, foot, and inch.

B.—The following object-lessons on common things:—

1. On a stool or chair.
2. „ a slate and pencil.
3. „ a book.
4. „ a tree and its fruit.
5. „ a mango and plantain.
6. „ seeds.
7. „ grass.
8. „ a plant yielding fibres which the children can extract.
9. „ the parts of the human body in greater detail than in the first period.
10. „ a cat.

C.—The hand and eye should be again trained by simple drawing exercises of the same character as those in the first period, but rather more advanced, with the drawing of triangles, rectangles, pentagons, etc., in addition.

Tracing outlines of leaves of plants of various shapes and of other flat bodies on slates. Leaves of plants may be pressed between sheets of paper (old newspaper) to make them lie quite flat.

After tracing a leaf or other flat object on the slate, the pupil should be required to make a freehand copy of his own diagram by the side of it, and compare it and correct it by placing the original object over it. This would help to train the eye and would fix the form of the object more clearly in the memory than simple tracing would.

D.—At this period the children are to begin to learn their letters, etc., and to write the letters of the alphabet and to form short words.

E.—Additional arithmetical exercises, multiplication tables, etc., should be learned. Slates may be used for the simple arithmetic.

F.—Short pieces of poetry should be committed to memory. Some of these should teach morality and the duties of children.

G.—Simple physical exercises and action songs.

H.—Kindergarten occupations such as stick-laying, seed-work, etc.

THIRD PERIOD OF INFANT CLASS—ONE YEAR'S COURSE (EQUAL TO STANDARD B OF PRESENT PRIMARY COURSE).

Age about 7 years.

A.—Training through the senses—

1. Through the eye—

(*a*) Lessons on form should include the notions of perpendicular, horizontal, oblique, parallel lines, the circle, sphere, cylinder, prisms, pyramid, and cone.

(*b*) Lessons on colour should deal with dark and light colours, and with the varying shades of such colours as red, blue, green, yellow, etc.

Primary and secondary colours, browns, greys, etc.

(*c*) Lessons on the four cardinal points.

2. Determination of weights with the use of bazaar scales.

3. Elementary notions about time should be given (indigenous and European), to include the year, month, week, day, hour, and minute, also division of the year into seasons.

B.—Object-lessons—

3. Further lessons about plants—

Seeds to be sown and grown to form plants.
Object-lessons on plants, such as pumpkin, and on vegetables, such as brinjal, beans, etc., for food.

4. Further lessons about the human body—

The blood, the brain, the skin.

5. Object-lessons about birds (pigeon, duck).

Simple lessons about the cow.

6. Object-lessons on vessels—

An earthen pot.
A water glass or a bottle.
A brass *lotah* or a brass plate (*thala*).

7. Object-lessons on common metals.

„ coins, copper and silver.
„ nails, screws.
„ a knife.
„ a key for a lock.

8. Object-lessons about plants yielding fibres, more advanced than in the previous stage.
The use of various fibres in the manufacture of cloth for clothing.

C.—Drawing (Hand-and Eye-training)—

Drawing on slates, of rather more advanced character than in the two previous stages.
Drawing outlines of leaves, etc., from memory must be practised.

D.—The study of reading and arithmetic to be continued, and before passing on to the next stage the children should be able to read very simple language, written and printed, and should be able to write slowly, very simple words from dictation.

E.—Verses on the duties of children should be committed to memory and recited.

F.—School Drill also to be included.

G.—Needle work (*for girls only*).—Hemming.

H.—Kindergarten occupations such as stick-laying, seed-work, paper-folding, etc.

STANDARD I—ONE YEAR'S COURSE (CORRESPONDING TO THE "A" CLASS OF A LOWER PRIMARY SCHOOL).

Age about 8 years.

Class subjects.—Reading, Writing,* Arithmetic,* Object-lessons and a Primer, with Drawing (Hand-and—Eye-training), Manual work, Needlework for girls, and School Drill.

Object-lessons (2 pages)—

THE SKY.

Sunrise, noon, sunset.—The children are to note with reference to the school-house or village the object over which the sun rises or sets from month to month, and to note also the sun's position at noon, and its varying height above the horizon.

Shadow.—The pupils are to notice by aid of an upright stick on a flat piece of ground the varying length of the shadow month by month.

Moon.—Note its changes. The pupils should draw the shape of the illuminated portion week by week.

Day and night.—Varying length of day and night at different seasons to be noted, and connected with the varying position of the sun as determined at rising and setting and at noon.

The Primer for this class will contain—

A.—Botany (5 pages).—

1. A broad sketch of the plant in reference to its three principal parts,—the root, the stem, and the leaf.
2. Talk about a seedling.
3. Distinction between root and stem.—Observe the germination of seed. One part grows upwards—the stem, and the other downwards—the root. If a growing plant be placed in an inverted position for some time, observe that the stem will bend and grow upwards and the root in the contrary direction. (A germinating pea placed upside down will show this.)

B.—Natural History (10 pages).—Habits and general description of the following domestic animals with anecdotes: the cow, the cat, and the dog, incidentally illustrating what is meant by herbivorous and carnivorous animals, their offensive and defensive weapons.

C.—Agriculture (10 pages) for Country schools, for boys only.—Alternative with Physics and Chemistry.

Necessaries of Life; Variety desirable as a protection against failure of crops. *Objects required*—specimens of cereals, pulses, oil-seeds, vegetables, sugar, salt, milk, fibres, straw, bamboos, timber spices.

* As at present.

D.—Physics (*5 pages*) *for town schools, for boys only.*—
The following lesson is to be in the form of conversation:—

Solid substances and some of their properties.—Take a solid, and show that it has a definite shape. This shape cannot be easily altered.

Some solids may be converted into liquids by heating, *e.g.*, wax.

Porous bodies.—Take a piece of charcoal and show the pores Examine also a piece of unglazed pottery. Water percolates through the pores. Examine blotting paper.

Liquids and some of their properties.—As example take water. It has no shape of its own; it takes the shape of the vessel in which it is poured. It breaks into drops. It flows down. Fill a bottle full of water. Try to cork it. The water is difficult to compress.

Solids are converted into liquids by heating; liquids are converted into solids by cooling. Observe how cocoanut oil becomes solidified in winter.

E.—Chemistry (*4 pages*) *for town schools, for boys only.*—
Lesson on solubility:—

Take a pinch of common salt, sugar, and finely-powdered chalk respectively in a tumbler, and add the same volume of water to each and stir with a rod. Observe the appearance of the liquids: the water with the salt and sugar is perfectly clear; that containing the chalk is milky. Now pass the liquids through filter papers. Observe that the milkiness in the last has now disappeared. Taste them one by one. The water containing the salt has a brackish taste; that which was poured over the sugar has a sweetish taste, whilst that which was treated with chalk has *no taste* whatever. Evaporate the liquids in succession in earthenware or enamelled cups. The water evaporates off slowly, and at last we have a residue of salt and sugar; but the water which was similarly treated with chalk leaves *nothing* behind.

F.—Hygiene (*8 pages*), *for boys only.*—

Food.—Its necessity. Evils of under-feeding and over-feeding. Ordinary articles of food, including meat, eggs, milk, fruits.

Drink.—Pure water how obtained. Causes of impurities in water.

Air.—Necessity of pure air. Causes of its impurities. How to purify the air of dwelling-houses.

Sunlight.—Its necessity in dwelling-houses.

F(a).—Domestic Economy (*8 pages*), *for girls only.*—

Bathing.—Anointing the body before bathing. Bathing as a means of cleaning the body. Bathing of little children.

Dress.—Dress capable of improvement. Clothes to be washed and kept clean. Children's clothes to be changed frequently.

The kitchen—Should be kept clean. Removal of refuse. Scrubbing the floor and cleaning walls and the ceiling. Admission of light and air into the kitchen.

G.—Drawing (*Hand-and Eye-training*).—Half the first part (of the four parts) of the Indian Drawing Books prepared in the School of Art:—

A set of Indian drawing copies has recently been supplied by a drawing book in four parts prepared by order of the Government of India. With some additional examples and a carefully-prepared set of instructions for teachers, the first book would be suitable for use in lower primary schools. The examples would have to be enlarged, mounted on pasteboard, and varnished. These enlarged examples would be hung in front of the class and copied by the students on their slates, so that one set would be sufficient for each school. The only expense would be the cost of one book for the teacher and one set of examples for each school. The examples would be of so simple a character that any intelligent teacher by the help of the printed instructions would be able to direct the class in the correct method of drawing them.

One page of directions regarding Drawing is to be included in the Science Primer.

H.—Manual Training, for boys only.—Leaf and Paper work.

Leaves (*palm, &c.*).—Making fans of different kinds, whistles, ornamental designs, baskets.

Paper.—Paper-folding, paper-modelling, such as caps, boats, and other toys, inkpots, pen-cases, etc., flying kites, flowers, garlands, slings, lanterns, etc., etc., envelopes.

Two pages of the Reader to contain directions about Manual Training.

Ha).—Needlework (for girls).—Top-sewing or seaming.

I.—Verses teaching the duties of children.

(Two pages at the end of the Primer.)

STANDARD II (CORRESPONDING TO PRESENT LOWER PRIMARY STANDARD).

Age about 9 years.

Class subjects.—Reading, Writing,* Arithmetic,* Object lessons and a Primer, with Drawing (Hand-and Eye-training), Manual work, Needlework for girls, and School Drill.†

Object-lessons (2 pages).—

THE AIR.

Winds.—The pupils should record the varying directions of the winds from season to season, or day to day, also note that some winds are warm, some cold, that some bring rain and some dry weather.

Air—Contains moisture or water vapour shown by two classes of facts—(*a*) clothes left out in open air at night become damp and wet, salt becomes damp and wet during rainy season, *i.e.*, vapour from air is turned into water, and (*b*) pools of water and tanks dry up in wind and sun, wet cloth becomes dry when hung in wind and sun, *i.e.*, the water in them turns into vapour. Human breath contains vapour, and this turns to water when a cold slate is breathed upon, or on a cold morning breath becomes visible owing to water being formed from the vapour in it.

Surface of lands.—The meaning of the terms plains, valleys, hills, etc., must be explained, and the teacher should make models in clay, sand, etc., to illustrate the meaning of such terms.

The Reader for this class will contain—

A.—Botany (5 pages)—

Root of a plant.—Function of the root (1) to hold the plant; (2) to supply food. Examine different kinds of roots.

Distinguish between the main roots and rootlets—

Fibrous roots—grass.
Fleshy roots—radish, beet.
Adventitious roots—banyan.

B.—Natural History (10 pages)—

General description of the members of the cat family with anecdotes.

Mammals.—The cat, chosen as a type—external configuration—round face—arrangement and disposition of the hair—habits.

Examination of the paw: (*a*) under surface; the fleshy pad—the retractile claws—when excited the claws are drawn out of the protecting sheath and the hair stands on end—mode of seizing prey.

The pupil of the cat's eye: almost a vertical line in broad daylight—in the dark it expands.

The cat: its maternal instincts—attitude of the male cat towards the offspring.

The tiger: only a big cat.

C.—Agriculture (8 pages), alternative with Physics and Chemistry for village schools, for boys only—

A lesson on rice and a lesson on oilseeds.

* As at present.
† Book containing instructions in Drill to be prepared.

D.—Physics—(5 pages), for boys only.—

Gases and some of their properties.—Blow into water through a tube; you see something bubbling up. Blow against your hand; you feel a current of air. Gases cannot be kept in an open-mouthed vessel. Gases are easily compressible.

Resumé of the general properties of matter (ice, water and steam).

Divisibility of matter.

Gravity.

E.—Chemistry (4 pages), for boys only.—Further lessons about solubility.

Take some lime in a bottle, fill half the bottle with water, cork it tightly, and violently agitate the contents. Allow to settle over night. Next day carefully decant off the clear liquid; note the *alkaline* nature of the water; divide it into two portions; blow into one by means of a tube of bamboo or some kind of reed. Observe how the water turns milky; the lime which was in solution has now been rendered insoluble and thus *precipitated*. Pass the milky water through a filter. The water is now colourless and devoid of taste. (*Cf.* Lessons on the Chemistry of a Candle.)

Treat similarly powdered alum, sulphate of copper, charcoal, sand, etc., and find out which of the above are soluble and which insoluble in water.

F.—Hygiene (8 pages), for boys only.—

Cleanliness and dress.—Bathing: its necessity. How to keep clean. How to keep the house clean. Uses of dress. Different articles used for weaving cloths.

Exercise and rest, including change of air.

Epidemics.—How to check their spread.

F(a).—Domestic Economy (8 pages), for girls.—

Cooking.—Cleanliness to be observed. Cleaning of utensils. Supply of good water for cooking food. Articles to be properly prepared and washed before cooking. Food to be prepared and kept covered as far as possible. Rice to be cooked last and eaten before it gets cold. Variety in food.

Bed-room.—Day sleep to be avoided. Regular hours of sleep. Over-crowding in rooms injurious. Use of mosquito curtains. Ventilation of rooms. Bedding of infants to be changed when soiled. Bed-clothes and pillows to be aired, and sunned and washed.

G.—Drawing (Hand- and Eye-training).—Second half of first part of the School of Art Drawing Book.*

H.—Manual Training (for boys only).—Exercises in Clay modelling.

Construction of pots, country lamps, other household articles, models of fruits and playthings.

One page of directions regarding Manual Training is to be included in the Science Primer.

H(a).—Needlework, for girls.—Running and felling and back-stitching.

I.—Verses teaching morality and duties of children (3 pages).

STANDARD III (CORRESPONDING TO LOWER CLASS OF UPPER PRIMARY SCHOOL)—ONE YEAR'S COURSE.

Age about 10 years.

Class subjects.—Reading, Writing,† Arithmetic;† a Historical, Geographical and Moral Reader; a Science Primer; Drawing (Hand- and Eye-training); Practical Geometry (INSTEAD OF EUCLID); Manual work; Needlework for girls and School Drill.‡

* These Drawing Books are now in course of revision, and drawings of Indian leaves, plants and animals illustrating the lessons in agriculture, natural history, and botany are to be included in them.

† As at present.

‡ Drill book to be prepared.

In addition to the Science Primer, a Reader containing lessons in History and Geography will have to be prepared for the Upper Primary Standard, and the first half of this book will be used in this class. This book should contain a few pieces of poetry, also some anecdotes with a moral tendency. It should not exceed 120 pages.

Object-lessons (2 pages).—

WATER.

Mist and fog—Are produced in the air and over tanks, etc., because the vapour, when cooled, changes into little drops of water.

Clouds—Are formed in the same way, but in the upper atmosphere.

Rain—Comes from these clouds, or from the vapour which has been cooled into drops of water.

Dew—Is water formed from vapour on or near the surface of the ground. The pupils should note when dew is formed, *i.e.*, whether during cloudy or cloudless weather, etc., the difference in the amount of dew in different seasons of the year, and on what objects the dew lies thickest.

Hailstone—Are rain drops made solid by cold, and they fall usually during thunderstorms. Hail-stones should be collected and examined, and allowed to melt in a glass, so that the water can be seen and tested.

Thunder and lightning—Also usually occur during storms of rain, hail, etc.

The Science Primer will contain—

A.—Botany (8 pages)—Stems and their functions—

Stems of plants.—The stem grows upward, so that the plant may get as much light as it can. Green plants cannot grow without light. Observe the discolouration and unhealthy condition of grass growing when shaded from light.

Different kinds of stems—

a.—Woody stems.
b.—Climbing stems. Observe the twining tendrils by which the plant obtains support, *e.g.*, cucurbita.
c.—Succulent stems.
d.—Underground stems, *e.g.*, potato, turmeric, ginger, etc.

B.—Natural History (10 pages)—

Difference between a vertebrate and an invertebrate animal as illustrated by comparing the wings, legs and body of a bird with those of a butterfly.

Animals without a back-bone: a snail, a cray fish, an earth-worm, a milliped, a butterfly, a leech and a cockroach compared with a fish.

The dog as compared with the cat in external appearance —the longish face—claws non-retractile—different breeds of dogs—Newfoundland, spaniel, greyhound, St. Bernard, and the uses they are put to—dogs of the cold countries furnished with a thick coating of fur.

C.—Agriculture (16 pages) for country schools, for boys only (alternative with Physics and Chemistry).—

Why crops fail.
Drought-resisting crops.
Irrigation from small depth and from great depth.

D.—Physics (10 pages) for town schools, for boys only—

Liquids.—Surface of liquid is always level. Pressure exerted by liquids in all directions. Bodies weigh less in water than in air. Floating bodies.

Gases.—Pressure exerted by the atmosphere. Invert a tumbler filled with water, with the open mouth covered with a card. Observe the water is kept from falling. The syringe.

E.—Chemistry (6 pages) for town schools, for boys only—

Chemistry of a Candle.—A candle attached to a stout iron wire is lighted and gradually lowered into a wide-mouthed glass bottle: it continues to burn. Observe that the sides of the bottle begin to lose transparency and become covered over with mist. Where does the water come from? The mouth of the bottle is gradually closed with a glass or earthenware plate. The light begins to get more and more dim till it is extinguished. Pour lime-water into the bottle and shake it. The lime-water turns milky. Take some fresh lime-water in a tumbler and blow into it. The lime-water in this case also turns milky.

F.—Hygiene (16 pages), for boys only—

Air.—Pure air. Cause of its impurities. Overcrowding in houses and public institutions. Means of ventilation.

Water.—Its sources of supply. Different ways in which it is rendered impure. How to secure pure water. Filters. Alcoholic and other objectionable drinks.

Food.—Why do we eat. Over-eating and under-eating. Different kinds of food, including cereals, pulses, tubers, vegetables, meat, milk and its preparation, sugar, eggs, fruits, preserved foods, condiments.

Sunlight, with special reference to its disinfecting action and necessity to health.

F(a).—Domestic Economy (16 pages), for girls—

How to keep rooms clean.—How they become unclean. Open lamps. Spitting in rooms and on walls improper. Sitting with naked back to the wall. Cobwebs. Children not to play with dirty things in rooms.

Furnishing rooms.—Furniture and utensils to be sufficient for the requirements of the household. Everything in its place. Use of lanterns. Advantages of glass or glazed or stone vessels over metallic articles from a sanitary point of view.

The kitchen—To be kept quite clean. Adjoining parts also to be clean. Utensils, cooking vessels, dishes to be made clean before and after use. Admission of light and air into the kitchen.

Sunlight, with special reference to its disinfecting action and necessity to health.

G.—Drawing (Hand-and Eye-training).—8 pages, explaining the lessons in the drawing book and the elementary practical geometry which is to take the place of mensuration are to be included in the Primer.

Subjects.—(1) Freehand drawing with chalk on the blackboard or a prepared wall surface. (2) Elementary practical geometry.

NOTE 1.—The value of freehand drawing on the blackboard as a means of physical and hand and eye-training is very great, and is hardly sufficiently appreciated in most schemes adopted in Europe. The facility with which it can be put into practice in any school building which has *pucka* walls makes it especially suitable for India. The advantages of it are that the students do not sit in a stooping position, as in writing or drawing on paper. They stand upright, with the head erect and the example opposite the eye. They walk backwards and forwards occasionally to observe their work at a distance. The hand does not rest on anything, but moves freely on the wrist. This in itself gives the arm and wrist a strength and the hand a certainty of touch, which cannot be acquired by any other kind of drawing.

The difficulty regarding the provision of blackboards or other drawing surface for a large number of students in all the upper primary schools in Bengal is easily surmounted. It is obvious that any upright surface properly prepared will answer as well as or better than a blackboard. Any building which has a *pucka* wall can have a surface prepared for drawing on at comparatively small expense. Portland cement would be the best material: it resists damp and saltpetre, which destroy ordinary plaster, and it makes a surface, when properly prepared, which will last for years. The colour of the surface is the next consideration. The natural colour of Portland cement is dirty and ugly, but by mixing the cement with Indian red (a red ochre which can be obtained easily and cheaply) in the proportion of about 1 to 6 by weight, a low-toned and pleasant colour can be obtained which would not be trying to the eyes. So, instead of blackboards, a band of coloured Portland cement, about 3 feet wide running round the whole class-room, at a height of about 3 feet from the ground, would make an excellent surface for drawing on, and would be a cheerful decorative feature in the class-room. The black-coloured surface is only necessary for a teacher's work in demonstrating figures and diagrams to students who sit at some distance off. For students' drawing practice, it is neither necessary nor desirable. The next question is the drawing examples. These would be taken from the Indian School of Art drawing book alluded to before. They would be mounted on cardboard and hung from a strip of wood fastened to the wall at the upper edge of the drawing surface. The students would enlarge the examples to three or four times the size, so that the copying should not be merely mechanical.

The elementary course of practical geometry is also advocated as being of far greater educational value for students of this age than the learning of Euclid, which is almost sure to degenerate into a mere memory exercise. The instruments required are not expensive. They consist of a pair of pencil compasses, a six-inch scale, and one or two small set squares.

H.—Manual Training, for boys only.—Weaving (4 pages)—

Basket-weaving with palm leaves.
String-weaving (knotting, netting, looping, plaiting, weaving of single loop chains of one string, sling-weaving).

H(a).—Needlework, for girls.—Cross-stitch and making a *kurta*.

STANDARD IV (CORRESPONDING TO UPPER PRIMARY CLASS—ONE YEAR'S COURSE).

Age about 11 years.

Class subjects.—Reading, Writing,* Arithmetic,* a Historical, Geographical and Moral Reader, Science Primer, Drawing (Hand- and Eye-training), Practical Geometry and Mensuration, Manual work for boys, Needlework for girls and School Drill.†

The second half of the Geographical, Historical and Moral Reader will be taken.

Object-lessons (3 pages)—

The action of water in nature and on the surface of the land.

Water, when it falls in the form of rain, etc., partly runs over the surface of the ground into tanks, streams, and rivers: it partly sinks into the ground to pass into wells and to reappear in the form of springs, etc., at a lower level, and it partly passes again into the air in the form of vapour.

The action of heavy rain in cutting channels in the earth or soil and in carrying away particles of light material, such as straw and wood, and of soil or earth, or even stones, into the nearest stream, and then into a larger stream or river, should be carefully watched by the pupils.

The pupils should study the nature of the nearest stream of water, determining in what part of the stream the current is most rapid, etc., and ascertaining how it carries away soil and even small stones, and how it cuts away its banks, etc.

The turbid water produced by a rapid stream should be placed in a glass tumbler, and the deposit of silt or soil found at the bottom on standing should be observed. Attention should be drawn to the fact that in this way new earth or soil has been formed in Bengal.

The pupils should be required to decide simple questions, such as—Is the ground on which the school stands level or sloping? Is the ground in the neighbourhood of the school, village or town level or sloping, the nature of the land being ascertained by watching the flow of water after rain (*i.e.*, by the drainage)? It should be noted that the greater the slope of the land, the more rapid will be the flow of water. The action of rain and running water in modifying the surface of the land must be fully explained.

The differences in the erosion of land by running water when (*a*) the land surface is bare and (*b*) when the land is covered with grass or vegetation or by forests must be explained.

Water can be made to pass through certain soils, sand, etc., easily, but it cannot pass through clay. This can be experimentally shown.

Wells and tanks are dependent for their supply of water on the level of the water in the soil, and the depth of this from the surface depends upon the nature of the soil, rainfall, etc. Subsoil water is essential to the growth of plants.

* As at present
† Drill book to be prepared.

The Science Primer for this class to contain—

A.—Botany (8 pages).—Lessons on leaves and flowers.

Leaves.—Function of leaves.
Different parts of a leaf—the stalk and the blade.

Make a collection and examine the different kinds of simple and compound leaves.
Some leaves are sensitive to touch, *e. g.*, the sensitive plant. Observe the order in which leaves close when the end of a branch is touched.

Flowers.—The function of flowers is to produce seeds, which give rise to a new plant.

Study of the different parts of a flower.
Count the number of sepals, petals, stamens and pistils of different kinds of flowers.
Examine pollen grains; also the pistil and the enclosed ovules. Pollen must fall on the stigma for the maturing of the seed.
Pollination often done by insects. The brightly coloured petals serve to attract the insects.

B.—Natural History (10 pages)—

The cow and the horse compared—the cloven foot and the solid foot—other members of the cow family: the buffalo, the sheep, the goat. Stomach of a goat (a typical ruminant) examined and laid open—the four chambers—the construction of the stomach suited to the habits of the animals which chew the cud.

C.—Agriculture (16 pages) for country schools, for boys only, alternative with Physics and Chemistry—

Food and fodder-yielding trees.
Insect and fungus pests.
Oil-cakes as cattle food and manure.

D.—Physics (10 pages) for town schools, for boys only.—
Heat—

Expansion of solids, liquids, and gases.
Make a simple liquid thermometer with a bottle and a tube or quill, and explain the principle of a thermometer.

Change of condition—
From solid to liquid.
„ liquid to gas.

Conduction—
Good conductors and bad conductors. Principle of warm clothing.

Convection—
Air currents and winds.

Radiation.

Boiling—
Elastic force of steam.

A simple reading lesson on the steam-engine.

E.—Chemistry (6 pages) for town schools, for boys only.—
Chemistry of a Candle, Second half:—

When air is breathed out, an invisible gas comes out which has the property of turning lime-water milky. This gas is also formed when a candle burns. Combustion to be explained and compared to respiration. The part which oxygen plays. Blow air into a charcoal fire by means of a pair of bellows. The fire becomes more and more brisk. The common practice in this country of stirring a fire by blowing air into it by means of a bamboo pipe to be referred to.

F.—Hygiene (for boys only)—16 pages.

Slightly more advanced than the matters intended for Lower Primary course—*Cleanliness* to *Epidemics.*
Ordinary accidents.—Burns, snake-bites, bites of rabid animals, drowning.

F(a).—Domestic Economy (for girls)—16 pages.

Cooking.—Good water to be used. Every article to be properly prepared and well cleaned and washed before putting it in the cooking pot. Cooking pots to be cleaned before use. Cooked food to be kept covered. Variety of dishes necessary.

Meals.—Time of meals. All to eat at the same time if possible. Hall for meals to be spacious and clean. Dishes and cups. Distribution of food. Economy and no waste. Simultaneous eating saves trouble and ensures economy. Evils of eating at separate times. Feeding of infants and little children. Over-feeding and under-feeding.

Bed-room.—Elevated bed necessary, especially in damp rooms. Over-crowding bad. Use of curtains. Sunning and washing bedding and clothes. Ventilation of rooms. Soiling of bedding by little children.

Ordinary accidents.—Burns, snake-bites, bites of rabid animals, drowning.

G.—Drawing (Hand- and Eye-training).—Freehand drawing book. Practical Geometry and Mensuration (15 pages).

H.—Manual Training (for boys only)—3 pages.

Bamboo work.—(*Dao* and knife.) Making of sticks, angling rods, paring of split bamboo for fencing purposes, cage-making, frame-work for plants.

H(a).—Needlework (for girls).—Cutting out a *kurta*; sewing on buttons and strings; making buttonholes; marking.

STANDARD V.—CLASS ABOVE THE UPPER PRIMARY STANDARD OR LOWER CLASS OF MIDDLE SCHOOL—ONE YEAR'S COURSE.

Age about 12 years.

Class subjects.—Reading, Writing,* Arithmetic,* a Literature book (about 150 pages), Geographical and Historical Reader, including some lessons in Physical Geography (together about 150 pages).† Science Reader, Drawing (Hand-and Eye-training), Practical Geometry and Mensuration alternative with Euclid first 26 propositions of book I, Manual work, Needlework for girls and School Drill.‡

More advanced Readers, to be prepared for the Middle School Standard in History and Geography, of which one-half would be read in this year's course.

The Science Reader for this class to contain—

A.—Botany (12 pages)—

Life history of a plant—

(1) How plants obtain their food—

A more detailed study of the functions of the root and leaf. Observe the arrangement of leaves to secure the largest area exposed to light. Transpiration.

(2) How plants store up food for future use—

(*a*) in the stem;
(*b*) in the root;
(*c*) in the seed for future use of the seedling.

(3) How plants protect themselves by means of thorns and other devices.

B.—Natural History (12 pages).—Teeth of certain typical animals:

Arrangement of the teeth in the upper and lower jaw respectively of the cat—the prominent *canines*—a characteristic of the carnivora—the function of the incisor—the canine and the molar teeth explained.

Dentition of a ruminant and a rodent compared.

Some typical members of the rodent family, the rat, and the squirrel.

* As at present.
† Such as Lee Warner's Citizen of India.
‡ Drill book to be prepared.

C.—Agriculture (16 pages) for country schools for boys only (alternative with Physics and Chemistry).—

Every Middle School choosing Agriculture as an alternative subject in place of Physics and Chemistry should provide itself with land sufficient for a small garden, where each boy can grow a few square yards of some crop. Each boy must also make a collection of at least five articles of agricultural interest for the school museum under the teacher's guidance. In course of time a complete local collection of soils, crops, manures, weeds, oils, fibres and other agricultural produce, insect and fungus pests, insecticides and fungicides, etc., may be made.

Fertility of soil. Lessons on *arahar* and *dhaincha*. How saltpetre is made. Sugarcane and sugar.

D.—Physics (10 pages) for town schools, for boys only. Light—

Light travels in a straight line. Shadows.

Reflection of light—plane mirror. Refraction of light. Refraction through a prism.

A double convex lens.—Formation of images by a double convex lens. Use of a lens as a simple microscope.

E.—Chemistry (6 pages) for town schools, for boys only.—Metals.

General properties of the metals.—Lustre—malleability; the alloys and their mode of formation. Liability to rust.

The well-known metals—Gold, silver, copper, tin, lead, zinc, iron, and the alloys brass and *kansa*; the different uses to which they are put.

F.—Hygiene (for boys only)—20 pages.

A short chapter defining terms used, and giving some idea of the human body and the functions of nutrition, and respiration.

Food.—Components of perfect food. Articles of good food, advantages of variety in foods. Food according to age and occupation.

Drink.—Water and its sources of supply.—How to secure good water. Rivers, tanks and wells how to be protected from pollution. Filters; storage of rain-water. Alcoholic and other drinks.

Air.—Carbonic acid gas. Other substances that pollute the air. Air inside and outside of houses. Air in towns, swamps, and in dry and high places. Slow poisoning by impure air. Natural purification of air how carried on. Ventilation in houses.

Construction of dwelling-houses.—Admission of air and sun light. How to keep the premises clean and dry.

F(a).—Domestic economy (for girls)—20 pages.

Feeding, bathing and cleanliness, pure air, ventilation of houses.

Management of common ailments. Colds, coughs, fevers, skin diseases, indigestion. Sick diet.

Burns and scalds, wounds and bruises.

G.—Free-hand Drawing (Hand- and Eye-training).—

G(*a*) Practical plane geometry, including simple practical mensuration of lines and surfaces (15 pages).

G(*b*) Euclid alternative with G(*a*) First 26 propositions of 1st Book.‡

H.—Manual Training (for boys.)—Bamboo work—3 pages.

Bamboo work.—As in the Upper Primary course.

H(a).—Needl-work (for girls).—Gathering and sewing on a band, darning and herring-boning.

STANDARD VI.—MIDDLE STANDARD—ONE YEAR'S COURSE.

Age about 13 years.

Class subjects.—Reading, Writing,* Arithmetic,* a Literature book, Geographical and Historical Reader, including some lessons in Physical Geography, Science Reader, Drawing (Hand- and Eye-training), Practical Geometry and Mensuration, alternative with Euclid, book I, Manual work for boys, Needle-work for girls and School Drill.†

The second halves of the Geographical and Historical Readers to be prepared.

* As at present.
† Drill book to be prepared.
‡ In a separate book.

Science Reader to contain—

A.—Botany (12 pages).—Life history of a plant.

How the seeds mature—

(*a*) Pollination by insects. The object of bright colouring of the flower-leaves. Insects are also attracted by scent. Observe how small and inconspicuous flowers club together to become conspicuous, *e.g.*, compositæ.
(*b*) Pollination by the wind.
(*c*) Water as carrier of pollen grain.

Dispersion of seeds, and the object of dispersion—

(*a*) Winged seeds.
(*b*) Seeds which are scattered by mechanical means.
(*c*) Seeds which are dispersed through the agency of birds and other animals.
(*d*) Dispersion of seed by currents of water.

B.—Natural History (12 pages).—

Development and metamorphosis of an insect, *e.g.*, a butterfly or a silkworm—the pupa and the chrysalis stage, etc.

Some typical members of the monkey family: The common monkey (*bandar*)—the *hunuman*.

The Snakes: their habits—mode of progression, how the snake bites—the curved, grooved poison fang.

C.—Agriculture (16 pages) for boys in country schools (alternative with Physics and Chemistry)—

Rotation of crops.
Feed and keep of cattle.
Use of bones as manure.

D.—Physics (10 pages) for town schools, for boys only.—Electricity and Magnetism.

Two kinds of electrification. Action of electrified bodies on one another. A pith-ball electroscope.

Directive action of earth on a magnet. A simple compass needle. Mutual action of similar and opposite poles.

Production of electric currents. Action of a current on a suspended magnetic needle.

E.—Chemistry (6 pages) for town schools, for boys only.—Elements and compounds, carbon and sulphur.

Carbon, graphite and diamond; the physical properties of each well illustrated and the economical uses to which they are applied. What happens when a piece of charcoal is burnt (*Cf.* Lesson on the Chemistry of a Candle).

Some ideas of an *element* and a *compound* incidentally conveyed. A blade of a knife previously well cleaned is dipped into a solution of sulphate of copper: the deposit of metallic copper shown. The copper a component of sulphate of copper; in a compound the properties of the component elements are entirely changed.

A lesson on Sulphur: its physical properties, colour, brittleness, bad conducting power of heat, fusibility, insolubility in water, economic uses, etc.

F.—Hygiene for boys only (20 pages)—

Village conservancy.—Disposal of filth and sewage. How villages are rendered unhealthy.

Cleanliness.—Personal and domestic. Bathing.

Dress.—Dress materials. Dress according to weather. Washing clothes.

Exercise and rest.—Different kinds of exercise. Sleep and its hours. Absolute rest in certain cases.

Epidemics.—Precautions to be taken.

Accidents.—Burns, snake-bites, bites of rabid animals, drowning, bleeding.

F(a).—Domestic Economy for girls (20 pages)—

Management of infectious diseases, including cholera, small-pox, chicken-pox, measles.

Infection.—Disinfection of premises, bedding, clothes.

The sick room.—Duties of the sick nurse, food and drinks for the sick.

Cooking of articles of sick diet.—Necessity of absolute cleanliness in preparing food, including pure water; ærated waters, lime water.

G.—Drawing (Hand and Eye-training).—Free hand drawing

G(*a*).—Practical plane Geometry, including simple practical Mensuration of lines and surfaces.—(15 pages).

G(*b*).—Euclid alternative with G(*a*) whole of 1st Book.*

H.—Manual Training for boys only (5 pages).—Bamboo work, woodwork.

Bamboo work.—As in the Upper Primary course.

Wood work.—Simple sloyd work with the sloyd knife only.

H(a).—Needlework for girls.—Cutting out and making a *piran;* feather-stitching and ornamental marking.

* Euclid will be contained in a separate book.

APPENDIX B.

CONDENSED TABULAR SYLLABUS.

SUBJECT.	AGE 5.	AGE 6.	AGE 7.	AGE 8.	AGE 9.	AGE 10.	AGE 11.	AGE 12.	AGE 13.
	First year of infant class.	Second year of infant class.	Third year of infant class. "B" Class of Lower Primary School.	Standard I=A Class, Lower Primary School.	Standard II=Lower Primary Class.	Standard III.	Standard IV=Upper Primary Class.	Standard V.	Standard VI=Middle Vernacular Class.
1	2	3	4	5	6	7	8	9	10
I. Drawing (Hand and eye-training).	Straight, crooked, curved lines; squares, oblongs; circles.	Drawing of triangles, rectangles, pentagons, etc., tracing outlines of flat objects.	Very simple free-hand drawing, tracing of flat objects and reproduction of outline, etc.	Free-hand drawing from copies on slates; first half of 1st School of Art Book.	Free-hand drawing from copies on slates; second half of 1st School of Art Book.	Free-hand drawing ...	Free-hand drawing ...	Free-hand drawing ...	Free-hand drawing.
II. Kindergarten	Lessons through eye, hand, taste. Kindergarten occupations.	Lessons through eye, hand, taste, ear, smell; lessons on measurement. Kindergarten occupations.	Further lessons through the senses, measurements, weight; lessons about the notion of time. Kindergarten occupations.	Nil	Nil	Nil	Nil	Nil	Nil.
III. Object-lessons	About school furniture, plants, human body, differences of animals.	About common plants, parts of body, a cat, etc.	On birds, cow; on common metals and simple articles made from metals; on plants yielding fibre, etc.; on domestic vessels; on parts of the human body.	The sky; the subjects in science, etc., are to be treated as object-lessons.	The air; the subjects in science, etc., are to be treated as object-lessons.	Water; the subjects in science, etc., are to be treated as object-lessons.	The action of water in nature; the subjects in science, etc., are to be treated as object-lessons.	Nil	Nil.
IV. Manual training (for boys only).	Nil	Nil	Nil	Leaf manipulation, paper-cutting, and folding.	Clay modelling ...	Weaving baskets and string weaving.	Elementary bamboo-work.	Bamboo-work ...	Bamboo-work and wood-work.
IVa. Needle work (for girls only).	Nil	Nil	Hemming	Top-sewing or seaming.	Running and felling and back-stitching.	Cross-stitch and making a *kurta*.	Cutting out a *kurta*, sewing on buttons and string; making button holes; marking.	Gathering and sewing on a band, darning and herring boning.	Cutting out and making a *pirans*; feather-stitching and ornamental marking.
V. Drill (for boys only).	Simple action songs ...	Simple action songs ...	Elementary drill and gymnastics.	Drill and gymnastics	Drill and gymnastics	Drill and gymnastics	Drill and gymnastics	Drill and gymnastics	Drill and gymnastics
Va. Drill (for girls only).	Ditto ...	Ditto	Elementary drill and calisthenics.	Drill and calisthenics	Drill and calisthenics	Drill and calisthenics	Drill and calisthenics	Drill and calisthenics	Drill and calisthenics.
VI. Writing ...	Commence writing numerals.	Writing of simple arithmetic; writing of letters.	Writing short words, etc., from dictation; writing sums.	Writing more complex words and sentences, etc.	Writing complex words and sentences, etc.	Writing complex words and sentences, etc.	Writing complex words, sentences, letters and very simple documents.	Nil	Nil.
VII. Arithmetic ...	Idea of number from object-lessons and Kindergarten.	Simple examples of addition, subtraction, simple multiplication tables; notation up to 100.	Examples of addition, subtraction, multiplication, mental arithmetic; notation up to 10,000.	Four simple rules; mental arithmetic; notation, the whole.	Simple and compound rules, reduction, mental arithmetic, European and native systems.	Simple proportion, G. C. M., L. C. M., mental arithmetic, European and native systems.	Vulgar fractions, interest, problems, mental arithmetic, European and native systems.	Decimals, practice, interest, square root, problems, with native arithmetic.	The whole.
VIII. Reading (Science Primer).	Nil	Learn letters	Children should be able to read simple printed and written language.	Standard I, Science Primer.	Standard II, Science Primer.	Standard III, Science Primer.	Standard IV, Science Primer.	Standard V, Science Reader.	Standard VI, Science Reader.
Science Primer includes the following subjects:— Botany ...	Nil	Nil	Nil	Simple facts about a [illegible]	Lessons on the roots [illegible]	Lessons on stems ...	Lessons on leaves and flowers.	Life history of plants	Life history of plants continued.

Botany	...	...	...	...	Habits and description of domestic animals—cow, cat, and dog.	Further lessons about the cat family.	Difference between vertebrate and invertebrate animals; more about the dog.	Cow and horse compared.	Dentition of animals	Development and metamorphosis of insect; members of the monkey family; snakes.
A. Agriculture (for country schools for boys only).	Nil	Nil	Nil	Nil	A Necessaries of life. Varieties of crops.	A Lesson on rice and oil-seeds.	A Why crops fail, drought, irrigation.	A Food and fodder-yielding trees, pests, oil-cakes.	A Work in school garden; collection of specimens; also lessons on fertility, pulse crops, sugarcane and saltpetre.	A Work in school garden; collections of specimens; also lessons on rotation of crops, feed and keep of cattle; use of bones.
or										
B. Physical Science (for town schools for boys only).	Nil	Nil	Nil	Nil	B Simple facts about general properties of matter.	B Further discussion on properties of matter.	B Pressure exerted by liquids; floating bodies; pressure of atmosphere; syringe.	B Heat—and its effects, conduction, convection, radiation, boiling.	B Light,—reflection, refraction.	B Electricity and magnetism.
Chemistry (for town school for boys only).	Nil	Nil	Nil	Nil	B Solubility	B Further experiments as to soluble and insoluble substances.	B Chemistry of a candle, first half.	B Chemistry of a candle, second half.	B General and chemical properties of well-known metals.	B Elements and compounds—carbon and sulphur.
Hygiene for boys ...	Nil	Nil	Nil	Nil	Food; drink; air; light	Cleanliness and dress; exercise and rest; epidemics.	Air; water; food; sunlight.	More advanced Lower Primary course; ordinary accidents.	Food; drink; air; dwelling-houses.	Village conservancy; cleanliness; dress; exercise and rest; epidemics; accidents.
or										
Domestic Economy for girls.	Nil	Nil	Nil	Nil	Bathing; dress; the kitchen.	Cooking; bed-room ...	How to keep rooms clean; furnishing room; the kitchen; sunlight.	Cooking; meals; bed-room; ordinary accidents.	Personal hygiene; treatment of common ailments, burns, scalds, wounds and bruises.	Infectious diseases; infection; sick-room; cooking of sick diet.
IX. Poetry or memorising short poems.*	Nil	Short pieces to be committed to memory.	Short pieces to be committed to memory.	Short pieces about duties of children to be committed to memory.	Pieces to be committed to memory.	Pieces in the Reader to be committed to memory.	Pieces in the Reader to be committed to memory.	.....	.....	
X History	Nil	Nil	Nil	Nil	Nil	Nil	First part of Historical portion of Reader.	Second part of Historical portion of Reader.	First part of a more advanced Reader.†	Second part of a more advanced Reader.†
XI Geography ...	Nil	Nil	Nil	Nil	Nil	Nil	Map of school-room, house and compound; map of village; first part of Geographical portion of Reader.	Map of district in which school is situated; maps of Bengal, India and World, with special reference to British Possessions; second part of Geographical portion of Reader.	First half of more advanced Reader.†	Second half of more advanced Reader.†
XII. Mensuration for boys only.	Nil	Nil	Nil	Nil	Nil	Nil	Taught as practical Geometry.	Elementary practical Geometry, including simple practical Mensuration.	Practical plane Geometry, including Mensuration or First 26 propositions of the First Book of Euclid.	Practical plane Geometry, including Mensuration or First Book of Euclid.
XIII. Literature book, including Grammar and Composition.*	Nil	Nil	Nil	Nil	Nil	Nil	Pieces contained in the Reader.	Pieces contained in the Reader.	Literature book ...	Literature book.

NOTE.—A and B are alternative for boys. For girls Needle-work takes the place of Manual Training. Agriculture (or Physical Science and Chemistry), Euclid and Mensuration are also omitted for girls.

* These should include pieces teaching *morality* and *the duties of children*.

† Such as—Sir W. Lee Warner's "Citizen of India."

APPENDIX C.

Table showing approximately the number of pages of lessons allotted to each Standard.

[The Text-Books prescribed are—The Junior Teacher's Manual (5 annas), the Senior Teacher's Manual (7 annas), the Drill Book (2 annas), the Alphabet and Spelling Book (not more than one anna), Indian Drawing Book, 4 parts (3 annas each), Lower Primary Reader (3 annas), Upper Primary Science Primer (4 annas), Upper Primary Historical, Geographical and Moral Reader (3 annas), Middle Vernacular Science Primer (7 annas), Middle Vernacular Literature Book (4 annas), Middle Vernacular Historical and Geographical Reader (4 annas), Euclid, First book (2 annas) and Arithmetic Book in two parts, the first to Lower Primary Standard, and the second part for Upper Primary and Middle Vernacular Standards, prices 2 and 6 annas, respectively. The Teachers' Manuals, the Drill Book and the Drawing Books need not be purchased by pupils. They should be supplied to schools.]

* The Junior Teacher's Manual (a book of about 200 pages) will give directions how the subjects marked (*) are to be taught. It should be in the hands of teachers of Lower Primary Standards.
† The Drill Book (about 75 pages) should also be in the hands of the teacher only.
‡ The Senior Teacher's Manual (about 250 pages) will give directions how the subjects marked (‡) are to be taught. It will also give directions regarding school management (including keeping of registers and accounts) and discipline. It should be in the hands of teachers of the Upper Primary and Middle Vernacular Standards.

APPENDIX D.

THE TEACHER'S MANUAL FOR THE LOWER PRIMARY STANDARD (200 PAGES).

1. *Introduction.*—A short and simple statement of the principles of the Kindergarten method of training young children (10 pages).
2. The Kindergarten occupations and action songs (8 pages).
3. The requirements of the syllabus for the Infant and Lower Primary Standards of Vernacular Education (10 pages).
4. The school-room and arrangement of children (3 pages).
5. Methods of giving lessons on particular subjects; full notes of lessons containing detailed instructions as to how to give lessons on form, colour, writing, reading, arithmetic, etc., so that the pupils might thoroughly learn the subjects taught, and that at the same time their senses might be trained, and their power of expression and all the faculties—physical, mental, and moral—be duly developed (162 pages).
6. Qualifications and duties of a good teacher, and his conduct towards his pupils; punctuality and discipline; corporal punishment (6 pages).

THE TEACHER'S MANUAL FOR THE UPPER PRIMARY AND MIDDLE VERNACULAR STANDARDS (250 PAGES).

1. *Introduction.*—The principles of Froebel's method, the principles underlying school education, the English Public School system, the Hindu method (20 pages).
2. The requirements of the syllabus for the Upper Primary and Middle Vernacular standards (10 pages).
3. *Class-teaching.*—Instruction and education; collective instruction; attention to individuals; analysis and synthesis; oral teaching and questioning; the Socratic method; answering, proceeding from the known to the unknown, from the concrete to the abstract; the verbal, material and pictorial illustration; the use to be made of analogy and contrast; the use of the black-board; learning by heart; repetition; home exercises; examining (30 pages).
4. Methods of teaching particular subjects, together with notes of lessons selected from text-books prescribed in science, literature, history, geography, etc. (155 pages).
5. Moral training (5 pages).
6. *Organization.*—The organization of a good school, time-tables, the arrangements into sections and classes, and of the standard of classification, the teaching staff, the apparatus and furniture, the register and account books, the drill and recreation, the sanitation of the school-room and school-house, etc. (10 pages).
7. The qualities necessary in a pupil; necessity of punctuality; discipline; rewards and punishment; drill as an aid to discipline (15 pages).
8. Qualifications and duties of a good teacher, and his conduct towards his pupils (5 pages).

APPENDIX E.

Statement showing the number of hours to be spent in a week on each subject in a Lower Primary School.

Names of Subjects.	Infant Stages.			Standard I.	Standard II.	Remarks.
	Stage I.	Stage II.	Stage III.			
1	2	3	4	5	6	7
I. Drawing ...	3	3	2	2	2	One teacher aided by two, three, or four Monitors or pupil-teachers is expected to teach successfully a Lower Primary School.

reason why an equally good result should not be attained in Ireland, if equal encouragement be given. From the experience of English and Scotch schools, it seems clear the Tonic Sol-fa method of teaching is the most simple and effective. This system has been already adopted in some Irish schools; and we strongly recommend that it be extended as rapidly and widely as may be found possible.

IX.—*Drill and Physical Exercises.*—Various kinds of Drill and Physical Exercises are now a recognised part of primary education in England, in Scotland, and on the Continent of Europe; and we think they should be introduced into the primary schools of Ireland with the least possible delay. We are satisfied, from what we have seen and heard on this subject, that such exercises contribute largely to the health, the spirits, and the general well-being of the children. They are no additional burden on school life, but rather a pleasant form of recreation; and the children return from them to their studies with renewed energy.

Mode of introduction.

It will be for the Commissioners of National Education to consider and determine in what manner these various changes can best be introduced into their system. But we have ventured to make some general suggestions on this head, which it may be well to set forth here in a summary form.

We think that the changes recommended ought to be introduced, not all at once, but gradually and tentatively. They should be tried first in the larger centres, and afterwards extended to more remote districts. It would be necessary, at the outset, to engage the services of experts from outside the present staff of the National Education Board, whose duty it would be to organise the classes and to aid the teachers with their counsel and instruction. But we have no doubt that this work, after a little time, could be taken up by the ordinary staff of the Board. Again, it is obviously important that all future teachers should be trained in the new subjects; and the programme of the Training Colleges must accordingly be framed to this end with as little delay as possible.

We have carefully considered the question by what means time may be found for the several exercises in manual and practical training which we have recommended; and we have pointed out certain modifications in the present programme of studies which may be adopted for that purpose, and which, we believe, will not interfere unfavourably with the course of instruction hitherto given in the National Schools.

Lastly, we are strongly of opinion that the system of Results Fees, depending on the individual examination of pupils, at present in force in the National Schools, ought not to be applied to these subjects of Manual and Practical Instruction. While it should be always open to the Inspector to examine individual pupils, we think that the grants awarded to the teacher in these subjects should largely depend on the general evidence of his own zeal and industry, on the efficiency of his method of teaching, and on his power to arrest and hold the attention of his class.

Reasons.

The considerations by which we have been led to the general conclusions above set out will be fully discussed in the second part of this Report, under the several heads of Manual and Practical Instruction. But we think it will be for your Excellency's convenience that the general summary of our conclusions should be here followed by a general summary of the grounds on which they are based—

Reasons mainly educational.

I.—First, then, there are reasons founded on educational principles. The present system, which consists largely in the study of books, is one-sided in its character, and it leaves some of the most useful faculties of the mind absolutely untrained. We think it important that children should be taught not merely to take in knowledge from books, but to observe with intelligence the material world around them; that they should be trained in habits of correct reasoning on the facts observed; and that they should, even at school, acquire some skill in the use of hand and eye to execute the conceptions of the brain. Such a training we regard as valuable to all, but especially valuable to those whose lives are to be mainly devoted to industrial arts and occupations. The great bulk of the pupils attending primary schools under the National Board will have to earn their bread by the work of their hands: it is therefore important that they should be trained from the beginning to use their hands with dexterity and intelligence.[1]

Reasons from experience.

II.—Next, we have the practical experience of those schools in England, Scotland, and on the continent of Europe in which such a system as we recommend has been already introduced and tested. The evidence we have received on this point is absolutely unanimous and, as we think, entirely conclusive. We have been told over and over again that the introduction of manual and practical training has contributed greatly to stimulate the intelligence of the pupils, to increase their interest in school work, and to make school life generally brighter and more pleasant. As a consequence the school attendance is improved, the children remain at school to a more advanced age, and much time is gained for the purpose of education.

[1] The general educational value of Manual Training in primary schools, especially for those who have to devote their lives to manual work, has been insisted on by a great number of witnesses. The following may be taken as examples:—*Mr. A. W. Bevis*, Director of Manual Training to the Birmingham School Board, vol. ii, pp. 3134—7; *Mr. George H. Robinson*, Head Master, Board School, Birmingham, vol. ii, pp. 3584—90; *Sir Philip Magnus*, City and Guilds of London Institute, vol. ii, pp. 4167, 4220—1; *Mr. T. G. Rooper*, H. M. Inspector of Schools in England, vol. ii, pp. 5136—41; *Mr. Solomon Barter*, Organiser of Manual Instruction to the London School Board, vol. ii, pp. 4928—34; *Mr. Edmund Morris*, Instructor in Woodwork to the Barrow-in-Furness School Board, vol. ii, pp. 10448—8a; *Mr. Arnold Graves*, Honorary Secretary to the Technical Education Association for Ireland, vol. iii. p. 10692; *Mr. S. M'C. Murray*, Head Master, Sciennes Public School, Edinburgh, vol. iv, pp. 22139—204; *Mr. J. G. Kerr*, Head Master, Allan Glen's School, Glasgow, vol. iv, pp. 23533—40.

We inquired particularly whether the literary side of school studies—reading, writing, arithmetic, grammar, and geography—had suffered any loss by the change; and the answer was uniform that no such loss had been observed. In some cases we were assured that the literary studies had been positively improved by the introduction of manual training. This result was accounted for partly by the increased intelligence of the children, partly by the constant change and variety of their occupations,—many of the most useful exercises being only a kind of organised play, and partly by their increased interest in their work.

We regard it also as a very significant testimony to the value of manual training that wherever it has been once introduced, it has, with hardly an exception, been continued and extended. There has been practically no disposition to go back to the old system, which made primary education almost exclusively literary in its character; and after an experience extending over some years, there is a general consensus of managers of schools, inspectors, and parents that the value of primary education has been greatly enhanced by the change.[1]

A basis needed for Technical Education.

III.—Lastly, there is a consideration of a practical character which seems to us deserving of no little weight. A strong desire exists throughout this country, and it is growing stronger every day, for the introduction of a general system of Technical Education. It is thought that a good system of Technical Education would contribute largely towards the development of arts and industries in Ireland; and in this opinion we entirely concur. But the present system of primary education is so one-sided in its character that it leaves the pupils quite unprepared for Technical Education. The clever boys trained in the National Schools, if they are disposed to seek for a higher education, may pass with advantage into Intermediate Schools of the kind now general in Ireland; but they are not fit to enter a Technical School, even if they had such a school at their doors. Now it seems to us that the changes we recommend would go far to remedy this defect. The system of National Education, modified as we propose, would give an all-round training to the faculties of the children, and would thus lay a solid foundation for any system of higher education—literary, scientific, or technical—which might afterwards be found suitable to their talents and their circumstances.[2]

---

[1] The testimony by which the statements made in the three paragraphs of the above section are supported permeates the whole body of the evidence we have taken in England and Scotland; and it cannot be adequately represented by isolated citations. Nevertheless, we think it may be well to subjoin here a few references to particular passages of the evidence which may be taken as typical examples of what we have everywhere heard—

(1) INCREASED INTELLIGENCE OF THE PUPILS.—*Mr. George H. Robinson*, Head Master, Board School, Birmingham, vol. ii, pp. 3487, 3497; *Hon. E. Lyulph Stanley*, Member of the London School Board, vol. ii, pp. 4402—3; *Mr. J. R. Diggle*, formerly Chairman of the London School Board, vol. ii, p. 4792; *Rev. C. D. Du Port*, H. M. Chief Inspector of Schools in England, vol. ii, pp. 5418—19; *Mr. C. A. Buckmaster*, Senior Inspector of Schools under the Science and Art Department, vol. ii, p. 5589; *Mr. Alfred Percival Graves*, H. M. Inspector of Schools in England, vol. ii, pp. 6192—4; *Sir Joshua Fitch*, formerly H. M. Chief Inspector of Training Colleges in England, vol. ii, p. 6517; *Mr. Edward M. Hance*, Clerk to the Liverpool School Board, vol. ii, p. 7199; *Mr. Jerome Wallace*, Teacher, Harlaw Public School, Canonbie, vol. iv, pp. 21537—8; *Mr. Robert Calder*, H. M. Inspector of Schools in Scotland, vol. iv, pp. 23899—904.

(2) GREATER INTEREST IN SCHOOL WORK, IMPROVED ATTENDANCE, AND LONGER TIME AT SCHOOL.—*Mr. George H. Robinson*, Head Master, Board School, Birmingham, vol. ii, p. 3493; *Sir Philip Magnus*, City and Guilds of London Institute, vol. ii, p. 4170; *Hon. E. Lyulph Stanley*, Member of the London School Board, vol. ii, pp. 4464—5; *Mr. J. R. Diggle*, formerly Chairman of the London School Board, vol. ii, pp. 4577—82; *Mr. William Oulton*, Vice-Chairman of the Liverpool School Board, vol. ii, pp. 6932—4, 7009—5; *Mr. Edward M. Hance*, Clerk to the Liverpool School Board, vol. ii, pp. 7196—8, 7228, 7302—3; *Mr. A. T. Bott*, Senior Inspector of Schools to the Liverpool School Board, vol. ii, p. 7693; *Dr. J. H. Gladstone*, F.R.S., formerly Member of the London School Board, vol. ii, p. 9923.

(3) LITERARY STUDIES HAVE NOT SUFFERED.—*Mr. John Taylor*, Head Master, Board School, Birmingham, vol. ii, pp. 3695—709; *Sir Philip Magnus*, City and Guilds of London Institute, vol. ii, p. 4172; *Hon. E. Lyulph Stanley*, Member of the London School Board, vol. ii, p. 4471; *Mr. William Oulton*, Vice-Chairman of the Liverpool School Board, vol. ii, pp. 7059—68; *Mr. Edward M. Hance*, Clerk to the Liverpool School Board, vol. ii, pp. 7199, 7267; *Mr. J. C. Pearson*, Director of Manual Instruction, Liverpool School Board, vol. ii, pp. 8079—80; *Mr. Colin G. Macrae*, Chairman of the Edinburgh School Board, vol. iv, pp. 21882—5, 21901—8; *Mr. A. E. Scougal*, H. M. Inspector of Schools in Scotland, vol. iv, pp. 22673—7; *Mr. G. W. Alexander*, Clerk to the Glasgow School Board, vol. iv, pp. 23219—22.

(4) MANUAL TRAINING ONCE INTRODUCED WAS FOUND USEFUL, TOOK ROOT AND DEVELOPED, AND BECAME POPULAR.—*Mr. A. W. Bevis*, Director of Manual Training to Birmingham School Board, vol. ii, p. 3159; *Mr. John Taylor*, Head Master, Board School, Birmingham, vol. ii, pp. 3693—4, 3725—38; *Sir Philip Magnus*, City and Guilds of London Institute, vol. ii, p. 4167; *Hon. E. Lyulph Stanley*, Member of the London School Board, vol. ii, p. 4489; *Mr. T. G. Rooper*, H. M. Inspector of Schools in England, vol. ii, pp. 5034, 5180, 5138—45; *Rev. C. D. Du Port*, H. M. Chief Inspector of Schools in England, vol. ii, pp. 5408—16; *Mr. John Cooke*, Hon. Secretary, Sloyd Association for Great Britain and Ireland, vol. ii, pp. 5619—27; *Mrs. Homan*, Member of the London School Board, vol. ii, pp. 6357—60; *Mr. William Oulton*, Vice-Chairman of the Liverpool School Board, vol. ii, pp. 6902, 6949—58, 7019; *Mr. A. T. Bott*, Senior Inspector of Schools to the Liverpool School Board, vol. ii, pp. 7593—603; *Mr. William Nelson*, Superintendent of Manual Instruction to the Manchester School Board, vol. ii, p. 8599; *Mr. A. E. Scougal*, H. M. Inspector of Schools in Scotland, vol. iv, pp. 22576—83; *Sir James Low*, formerly Lord Provost of Dundee, vol. iv, pp. 23743—7.

(5) GENERAL EVIDENCE INCLUDING TWO OR MORE OF THE ABOVE HEADS.—*Sir Joshua Fitch*, formerly H. M. Chief Inspector of Training Colleges in England, vol. ii, pp. 6493—99, 6543—46; *Mr. Solomon Barter*, Organizer of Manual Instruction to the London School Board, vol. ii, pp. 4832—37; *Mr. Arthur Haweridge*, Superintendent of Schools to Barrow-in-Furness School Board vol. ii, pp. 10282—95; *Mr. Colin G. Macrae*, Chairman of the Edinburgh School Board, vol. iv, pp. 21825—35, 21739—49, 21753—70; *Mr. S. M'C. Murray*, Head Master, Sciennes Public School, Edinburgh, vol. iv, pp. 22142—8, 22205—11, 22264—79; *Sir John Cuthbertson*, Chairman of the Glasgow School Board, vol. iv, pp. 22996, 23109—14; *Mr. J. G. Kerr*, Head Master, Allan Glen's School, Glasgow, vol. iv, pp. 23512—23; *Mr. G. J. Torbat*, Head Master, Continuation School, Dundee, vol. iv, pp. 23963—70.

[2] Many witnesses in the course of their evidence have incidentally pointed out the necessity of Manual and Practical Instruction in primary schools as a basis for Technical Education. For example:—*Professor H. E. Armstrong*, City and Guilds of London Institute, vol. ii, pp. 3795—6; *Mr. J. R. Diggle*, formerly Chairman of the London School Board, vol. ii, pp. 4650—61; *Mr. Solomon Barter*, Organizer of Manual Instruction to the London School Board, vol. ii, p. 4838; *Mr. William Oulton*, Vice-Chairman of the Liverpool School Board, vol. ii, p. 6931; *Rev. Brother Thomas*, Principal, De La Salle Training College, vol. iv, p. 14277; *Rev. P. Lally*, Honorary Secretary, Galway Technical School, vol. iv, pp. 16939—42; *Mr. James Perry*, Country Surveyor of Galway, vol. iv, pp. 17291—301; *Mr. Colin G. Macrae*, Chairman of the Edinburgh School Board, vol. iv, pp. 21843—4; *Sir John Cuthbertson*, Chairman of the Glasgow School Board, vol. iv, pp. 22997—9; *Sir James Low*, formerly Lord Provost of Dundee, vol. iv, pp. 23711—14; *Professor Hartley*, F.R.S., College of Science, Dublin, vol. iv, pp. 26248—51, 26323—4.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secy. to the Govt. of Bengal.

FINAL REPORT OF THE COMMISSIONERS APPOINTED TO CONSIDER MANUAL AND PRACTICAL INSTRUCTION IN PRIMARY SCHOOLS UNDER THE BOARD OF NATIONAL EDUCATION IN IRELAND.

PART I.

General conclusions, and the grounds on which they are based.

I.—*Kindergarten.*—We are of opinion that the general principles and methods of the system known by the name of Kindergarten, which have been already introduced into some of the schools under the National Education Board, should be extended as far as possible to all schools attended by infant children.

II.—*Educational handwork.*—We think that Kindergarten methods and principles should be continued in Classes I, II, and III of ordinary schools in the form of Paper-folding, Cardboard-work, Wire-work, Brick-laying, Clay-modelling and such like exercises. These exercises we include under the general term of *Hand and Eye Training*, and we look upon them as of great importance for the purpose of carrying on the manual training of the children, from the Kindergarten stage to the higher grades of Manual Instruction. Further, we consider that some form of more advanced Manual Instruction should be introduced, as far as possible, in the higher classes of schools for boys; and we recommend as most suitable for this purpose instruction in the principles and practice of *Woodwork*, treated educationally. The object to be aimed at is not to make the boys carpenters, but to train them in habits of accurate observation, careful measurement, and exact workmanship. Such habits we regard as of great value to all boys, whatever may be their subsequent career in life.

III.—*Drawing.*—We recommend that Drawing should be made compulsory, as far as possible, in all National Schools. The first elements of it find a place in the Kindergarten system, and it should be continued, we think, to the end of the school career. In the classes above the Kindergarten, it should be associated with Hand and Eye Training, with Woodwork, and to some extent also with Elementary Science, as soon as these subjects are introduced.

IV.—*Elementary science.*—We are of opinion that a simple course of Elementary Science should form a part of ordinary education in National Schools. This course should be so framed as to bring home to the minds of the children an intelligent knowledge of the common facts of nature, and the rudimentary principles of science. In the lower classes it should consist in great part of object lessons; and in the higher classes it should be illustrated by simple experiments. The pupils should be encouraged and assisted, as far as may be found practicable, to take part in the experiments. The programme for this course, while following everywhere the same general lines, may with advantage be varied in its details, according to the circumstances of the locality and the character and condition of the children.

V.—*Agriculture.*—We do not think that Agriculture as an art, that is to say, practical farming, is a subject that properly belongs to elementary education. At present the study of what is called the Theory of Agriculture is compulsory for boys in all rural schools, and is highly encouraged by fees. But our inquiry has shown that this study consists for the most part in committing a text-book to memory; and we have come to the conclusion that it has little educational or practical value. We recommend instead that the course of Elementary Science to be taught in rural schools should be so framed as to illustrate the more simple scientific principles that underlie the art and industry of Agriculture. We also recommend the maintenance and extension of School Gardens as a means by which these scientific principles may be illustrated and made interesting to the pupils. On the other hand, we do not consider that the maintenance of School Farms, the object of which is to teach the art of Agriculture, properly belongs to the functions of a Board of primary education. As regards the Model Farm at Glasnevin and the Munster Dairy School, we think that they could be made more useful for the purposes of Agricultural education if placed in charge of an Agricultural Department, whenever such a Department is established in Ireland.

VI.—*Cookery, Laundry work, and Domestic Science.*—We think it very desirable that Cookery, Laundry work, and Domestic Science should be taught, as far as may be found practicable, in girls' schools. We cannot advise that these subjects should at present be made compulsory; but we do recommend that aid should be freely given to provide the necessary buildings and equipment for teaching them; and that managers and teachers should be encouraged to take them up by a liberal system of grants.

VII.—*Needlework.*—Needlework should continue to form, as at present, an important element in all schools for girls. The first elements of it are taught in the Kindergarten system. It should be continued in Classes I, II, and III as a part of Hand and Eye Training; and in the higher classes advanced Needlework will naturally occupy the time devoted to Woodwork in schools for boys.

VIII.—*Singing.*—We recommend that Singing should be brought within the reach, as far as possible, of all the children attending National Schools in Ireland. It has a cultivating and refining influence, and furnishes a source of permanent enjoyment. In England and Scotland the number of children who are taught Singing in schools inspected by the State is about 99 per cent. of the number in average attendance; and we see no

WEATHER AND CROP REPORT.

For the week ending the 3rd July 1899.

Burdwan.—Rainfall at Sadar 4·33, Kalna 6·54, Katwa 6·01, Raniganj 2·56. Weather seasonable. Sowing and transplanting of *aman* paddy continue. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa decreasing. Common rice selling as follows:—

	Srs.	
Sadar	16 to 19	per rupee.
Kalna	15	
Katwa	18	
Raniganj	18½	

Birbhum.—Rainfall at Sadar 3·19, Rampur Hât 3·74. Weather cloudy with occasional showers. Sowing of seed and ploughing going on. Price of common rice at Sadar and Rampur Hât 18 seers per rupee. Fodder sufficient. No cattle-disease.

Bankura.—Rainfall at Bankura 2·67, Vishnupur 2·90. Weather cloudy with rain almost every day. Transplantation of *aus* and *aman* going on briskly. Sugarcane doing tolerably well. No cattle-disease reported. Fodder and water sufficient. Common rice sells at 17½ seers per rupee at Bankura and Vishnupur.

Midnapore.—Rainfall at Sadar 4·41, Contai 4·23, Tamluk 2·47, Ghatal 7·03. Weather seasonable. Prospects of sugarcane, jute and flax favorable. Cattle-disease reported from Chandrakona. Common rice sells as follows:—

	Srs.	
Sadar	12 to 20	per rupee.
Tamluk	14½	
Ghatal	14 to 18	
Contai	16	

Hooghly.—Rainfall at Sadar 4·24, Serampur 4·28, Jahanabad 6·17. Sowing of paddy continues. Excessive rain damaged jute and paddy seedlings. Common rice sells from 13 to 16 seers per rupee.

Howrah.—Rainfall at Sadar 7·93, Ulubaria 2·23. Weather cloudy with rain almost every day. Sowing of *aman* and *aus* still continues. Transplantation of *aman* commenced in places. The recent rain has done some damage to the paddy seedlings in Ulubaria. Sugarcane and jute doing well. Fodder and water sufficient. Common rice sells at 12 to 14 seers per rupee.

24-Parganas.—Rainfall at Sadar 6·40, Barasat 7·12, Basirhat 1·87, Diamond Harbour 2·91. Weather hot and cloudy with occasional rain. Weeding operations resumed. Prospects hopeful. Cattle-disease reported from Basirhat subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	13½ to 16	per rupee.
Barasat	16½	
Basirhat	18-4½ch.	
Diamond Harbour	16	

Nadia.—Rainfall at Sadar 5·58, Kushtia 5·23, Meherpur 4·03, Chuadanga 2·24, Ranaghat 4·76. Weather cloudy and rainy. Prospects of crops promising. Fodder and water sufficient. Price of common rice stationary.

Murshidabad.—Rainfall at Sadar 5·50, Kandi 2·58, Jangipur 4·17. Weather seasonable. Transplantation of *aman* still going on. *Bhadoi* and jute thriving well. State of indigo and mulberry good. Most of the paddy is under water on account of excessive rain. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Kandi	18¼	
Jangipur	18	

Jessore.—Rainfall at Jessore 6·13, Jhenida 3·82, Magura 8·19, Narail 6·70, Bangaon 2·78. Weather cloudy and rainy; occasionally hot. Weeding of *aus* and jute going on. Prospects of standing crops good. Insects damaging paddy in the subdivisions of Magura, Narail and Bangaon. Cattle-disease reported from thana Gaighata in the Bangaon subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Jessore	16 to 20	per rupee.
Jhenida	16	
Magura	17 to 20	
Narail	20	

Khulna.—Rainfall at Sadar 7·88, Bagirhat 4·49, Satkhira 3·42. Weather rainy and cloudy. Cultivation and transplantation of *aman* going on. Fodder and water sufficient. Cattle-disease reported from thana Rampal. Common rice sells as follows:—

	Srs.	
Sadar	19 to 23	per rupee.
Bagirhat	20	
Satkhira	15 and 20 (coarse *aus*).	

Rajshahi.—Rainfall at Sadar 2·67, Nator 5·01, Naugaon 6·39. Prospects of crops good. No cattle-disease. Fodder and water ample. Price of rice ranges from 16 to 23 seers per rupee.

Dinajpur.—Average rainfall 5·50. Weather rainy. Cultivation of land for *haimanti* going on. Standing crops good, but weeding of *bhadoi* and jute retarded by incessant rain. Cattle-disease reported from six thanas. Rice selling from 16 to 20 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 9·92, Alipur Duars 13·08. Weather cloudy and rainy. *Bhadoi* paddy and jute progressing. Transplantation of *haimanti* paddy commenced. Prospects good. Fodder and water sufficient. Common rice sells from 10 to 13 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 8·78, Siliguri 4·92. Weather seasonable. *Hills*—*Bhutta*, *bhadoi* paddy, and *chota marua* doing well. *Terai*—Jute, *bhadoi*, and sugarcane doing well; prospects good; lands being prepared for *haimanti* paddy. Coarse rice sells as follows:—

	Srs.	
Hills	9 to 12	per rupee.
Terai	15 to 19	

Bhutta sells at Darjeeling 24 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 2·11, Kurigram 2·76, Gaibanda 5·63, Nilphamari 8·93. Weather rainy. Cutting of *aus* and transplanting of winter rice going on. Prospects good. Common rice selling from 16½ to 20 seers per rupee. Fodder and water sufficient. Cattle-disease reported from one village in thana Jaldhaka in the Nilphamari subdivision.

Bogra.—Average rainfall 4·51. Cultivation of *aman* going on. Prospects good. Common rice sells from 17 to 24 seers per rupee. Supply of fodder and water sufficient.

Pabna.—Rainfall at Sadar 4·71, Sirajganj 7·94. Weather hot and rainy. Prospects of crops very good. Prices unchanged.

Dacca.—Rainfall at Sadar 11·16, Manikganj 4·42, Munshiganj 6·60, Narainganj 6·86. Weather seasonable. Insects have destroyed a good deal of paddy in almost all parts of the district, and are still destroying jute in some parts. Fodder available. No cattle-disease. Price of common rice stationary.

Mymensingh.—Rainfall at Sadar 4·13, Jamalpur 2·97, Tangail 6·07, Kishorganj 2·31, Netrokona 6·94. Weather showery. Prospects of crops excellent. Condition of cattle good. Fodder and water ample. Common rice sells as follows:—

	Srs.	
Sadar	20	per rupee.
Netrokona	24	
Tangail	18	

Faridpur.—Rainfall at Sadar 8·93, Goalundo 7·98, Madaripur 11·61. Weather cool and rainy. State and prospects of crops good. Common rice sells at 18 seers per rupee.

Backergunge.—Rainfall at Sadar 4·35. Weather showery. Prospects of crops fair. *Aman* rice sells from 14 to 21 seers per rupee.

Tippera.—Rainfall at Sadar 1·94, Brahmanbaria 1·13, Chandpur 6·87. Weather seasonable. Standing crops doing well. Prospects favourable. Average price of common rice 19 seers per rupee.

Noakhali.—Rainfall at Sadar 4·92, Feni 8·60. Prospects of standing crops fair. No cattle-disease. Fodder and water sufficient. Price of rice stationary.

Chittagong.—Rainfall 14·64. Weather cloudy and hot. Cultivation of *aus* progressing. Prices steady. Water and fodder sufficient.

Patna.—Rainfall at Sadar 7·58, Bikram 8·00, Hilsa 6·55, Bihar 4·85, Barh 2·69, Dinapore 5·16. Sowing of Indian-corn and transplanting of *marua* going on. Condition of cattle good. Green fodder and water for cattle plentiful. Common rice in Patna sells at 19 seers per rupee.

Gaya.—Rainfall at Sadar 5·59, Jahanabad 3·42, Aurangabad 7·74, Nawada 2·41. Paddy and *bhadoi* crops being sown. Common rice selling at 17 seers per rupee.

Shahabad.—Rainfall at Sadar 5·98, Buxar 9·02, Bhabua 3·33, Sasaram 7·63. *Bhadoi* and rice crops being sown Sugarcane doing well. Cattle-disease still in Sasaram subdivision. Prices stationary.

Saran.—Rainfall at Sadar 4·02, Siwan 4·61, Gopalganj 2·72. Weather showery. *Bhadoi* sowings almost finished and germinating well. Paddy sowings still going on. General prospects good. Average prices—Common rice 14·15 seers and *makai* 25·8 seers per rupee.

Champaran.—Rainfall at Motihari 6·16, Bettiah 7·98, Barharwa 3·67, Bagaha 5·39, Ramnagar 1·95. Prospects good. *Bhadoi* sowings continue. Weeding of *makai* and *kodo* and transplanting of *marua* and paddy going on. Price of common rice 13½ seers and of maize 23 seers per rupee.

Muzaffarpur.—Rainfall at Sadar 13·69, Hazipur 9·23, Sitamarhi 6·52. Sowing of *bhadoi* crops retarded somewhat owing to continued heavy rain; otherwise prospects good. Prices are—Common rice 12 to 15 seers, wheat 16 to 18 seers, barley 24 seers, *makai* 23 to 24 seers, gram 21 to 24 seers, and *rahar* 20 to 21 seers per rupee.

Monghyr.—Rainfall at Monghyr 7·28, Begusarai 4·41, Jamui 5·47. Young standing crops doing well. *Bhadoi* and paddy sowings continue. Weeding of *bhadoi* commenced in places. Common rice sells as follows:—

	Srs.	
Monghyr	12½ to 15	per rupee.
Begusarai	15	
Jamui	16	

Bhagalpur.—Weather hot and warm. Rainfall at Sadar 1·76, Banka 1·78, Madhipura 5·56, Supaul 4·24. Sowing and transplanting of paddy in progress. No cattle-disease except a few cases in Madhipura. Prices stationary.

Purnea.—Rainfall at Sadar 4·38, Kishanganj 6·90, Araria 7·45. Weather rainy. Standing crops in good condition. Transplantation of winter rice going on. Prospects generally good. A cessation of rain will benefit crops. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Araria	15	
Kishanganj	16	

Malda.—Rainfall at Sadar 5·17, Chanchal 8·00, Shibganj 2·52, Gajole 4·82. Weather warm and showery. Constant rain retarding weeding of *bhadoi* paddy and jute. Indian-corn doing well. Price of common rice stationary at 18 seers per rupee. Fodder ample.

Santhal Parganas.—Abundant rain—average 5 inches. Cultivation active. Price of common rice 14 to 18 seers and of maize 18 to 32 seers per rupee. Cattle-disease in Rajmahal.

Cuttack.—Rainfall at Sadar 4·28, Jajpur 1·59, Kendrapara 1·98, Banki 1·90, False Point 4·48. Weather seasonable. *Sarad*, jute and sugarcane growing. *Beali* being weeded and harrowed. Cotton being harvested. Condition of cattle generally good, but cattle-disease reported from some places. Fodder and water sufficient. Common rice sells as follows:—

	S.	ch.	
Cuttack	17	1	per rupee.
Jajpur	17	1	
Kendrapara	19	11	
Banki	17	15	

Balasore.—Rainfall at Sadar 5·34. Sugarcane thriving well. *Beali* and *sarad* growing well and seedlings out in places. Rice sells from 16 to 24 seers per rupee in the interior, and at 17 seers at Balasore and Bhadrak. Cattle-disease in chakla Dhamnagar ceased but appeared in chakla Singla. Fodder and water sufficient.

Angul.—Weather seasonable. Rainfall at Sadar 2·39, Bisipara 1·09. Paddy seedlings doing well. Early cotton being sown. Common rice selling at 24 seers per rupee in Angul and 16⅔ seers in Khondmals.

Puri.—Rainfall at Puri ·94, Khurda 2·22. *Beali* being harrowed. Sowing of *sarad* crop continues. Sugarcane, *mandia* and other miscellaneous crops doing well. Fodder and water sufficient. Cattle-disease reported from parts of the district. Common rice sells as follows:—

	S. ch.	
Puri	15 12	per rupee.
Khurda	17 11	
Interior of the district	15 12 to 21 0	

Hazaribagh.—Rainfall at Sadar 5·79, Giridih 3·60. Weather rainy. Ploughing and sowing in progress. Common rice sells from 15 to 20 seers per rupee.

Ranchi.—Rainfall 4·78. Weather seasonable. Ploughing and sowing continue. Rice sells at Ranchi 15 seers per rupee, and in the interior from 16 to 25 seers per rupee. Health of cattle good. Fodder and water plentiful.

Palamau.—Rainfall 4·86. Weather seasonable. Heavy rain everywhere. Sowing of *bhadoi* in full swing. Prospects of sugarcane good. Rice sells at 16 seers per rupee.

Manbhum.—Rainfall at Sadar 6·28, Gobindpur 3·57. Weather seasonable. Prospects of crops generally good. Cattle-disease reported from thanas Jhalda and Tundi. Fodder and water sufficient. Average price of common rice at Sadar 18 seers 10 chitaks per rupee and at Gobindpur 18 seers per rupee. Supply sufficient.

Singbhum.—Rainfall 2·52. Crops doing well. Rice sells at Kalikapur 22 seers per rupee, and at other places at rates varying from 16 to 20 seers per rupee.

General Summary.—Heavy rain has fallen all over the Province. General agricultural prospects are favourable, but in some parts the cultivation is retarded by heavy rain. The sowing of autumn crops and of winter rice and the transplanting of seedlings are in progress. Early rice, jute and sugarcane are in good condition. Insects are said to have destroyed a good deal of the young paddy and jute crops in Dacca, and the paddy plants in some parts of Jessore. Fodder is abundant. Cattle-disease is still reported from many districts. Except for a slight rise in a few districts, the price of common rice remained stationary.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

The total fall from 1st January to 1st July 1899		29·63
The average fall of the corresponding period for 24 years, Surveyor-General's Office		21·96

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; p, passing temporary showers.

RESOLUTION ON THE ANNUAL REPORT ON EMIGRATION FROM THE PORT OF CALCUTTA TO BRITISH AND FOREIGN COLONIES FOR THE YEAR 1898.

GENERAL DEPARTMENT.—EMIGRATION.

Darjeeling, the 6th July 1899.

RESOLUTION—No. 505T.G.

READ—

The Annual Report on Emigration from the Port of Calcutta to British and Foreign Colonies for the year 1898.

The appointment of Protector of Emigrants was held by Dr. C. Banks throughout the year.

Administrative measures.

2. During the year emigration to the Seychelles Islands was declared to be lawful, and Mr. A. C. Stewart was appointed by this Government as Emigration Agent at Calcutta for that Colony. A new edition was issued of the Rules relating to colonial emigration.

Requisition and despatch of labourers.

3. As in the two previous years, 1896 and 1897, there were six agencies at work, namely, five British and one Dutch, but the coolies which were requisitioned for Jamaica could not be despatched till February 1899, owing to

the difficulty experienced in recruitment. The following table shows the demand and supply of adult labour in the year under review as compared with the year 1897:—

Name of Colony.	1897.		1898.	
	Indent.	Supply.	Indent.	Supply.
1	2	3	4	5
Demerara	1,200	1,149	2,400	2,301
Trinidad	1,700	1,800	1,200	1,225
Jamaica	.....	.....	690	Nil (623 were supplied in February 1899).
Mauritius	240	292	.....	.....
Natal	1,994	2,850	908	1,358
Fiji	1,300	1,287	560	560
Surinam	590	.....	600	590
Total ...	7,024	7,378	6,358	6,034

Terms of engagement of intending emigrants.

4. The terms on which emigrants were engaged during 1898 for Demerara and Jamaica were altered as to return passages; for Trinidad the alterations concerned the duration of work, period of indenture, classification of emigrants, wages, rations, and return passages. None of these changes were in favour of the emigrants. For the other colonies the terms on which emigrants were engaged remained the same as in 1897.

Recruiting operations.

5. Of the 701 licenses granted to recruiters, 27 were subsequently cancelled for various causes. During the period under review 9,334 emigrants were registered as against 12,315 in 1897. The decrease is, no doubt rightly, ascribed to the greater prosperity of the agricultural population and the abundance and cheapness of food-supplies. Of the number recruited during the year, 6 per cent. were obtained in Bengal, 7 per cent. in Bihar, 55 per cent. in the North-Western Provinces, and 32 per cent. in Oudh, as against 9, 10, 56, and 24 per cent., respectively, in the prevous year.

History of intending emigrants subsequent to registration.

6. Of the 9,487 emigrants including 153 remaining from the previous year, (accommodated in the sub-depôts), 1,492 or 16 per cent. did not start for Calcutta, while 7,439 or 79 per cent. of those recruited actually reached Calcutta; 258 remained in the sub-depôts at the close of the year.

Altogether 8,116 emigrants were accommodated in Calcutta, including 667 remaining from the previous year. Of these, 663 were rejected as unfit, 152 deserted, 13 died, 470 were discharged for various reasons, and 6,223 or about 77 per cent. were despatched to the colonies, leaving 595 in two of the depôts at the close of the year for subsequent disposal.

Of the number despatched, 5,350 were Hindus and 873 Muhammadans.

The percentage under the head of "Rejected as unfit" has risen from 7·56 in the previous year to 8·16 in 1898, and the Protector's attention is drawn to the request made in paragraph 6 of the Resolution of this Government on his Report for the year 1897 that special attention should be paid to the matter of awarding compensation to persons who are brought down to Calcutta at great inconvenience to themselves and then rejected as unfit. A report of what has been done to meet the orders of Government should be submitted at a very early date.

Sanitation and management of depôts.

7. The total number admitted into hospitals was 337, of whom 13 died, as compared with 489 admissions and 26 deaths in 1897.

Embarkation of emigrants.

8. Of the emigrants who were embarked, 38 per cent. were for Demerara, 20 per cent. for Trinidad, 22 per cent. for Natal, 9 per cent. for Fiji, and 10 per cent. for Surinam. There were 8 sailing ships and 4 steamers engaged to convey the emigrants, as against 7 and 9, respectively, in the previous year; the average number carried on each being 518 as compared with 474 in 1897. The four steamers conveyed emigrants to Natal only. The duration of the voyage varied from 22 days to Natal, to 120 days to Demerara; the average duration being 73 days as against 52 in 1897.

The aggregate mortality on the various voyages was 27 as against 58 in 1897. The largest number of deaths (5) occurred on the *S.S. Umzinto*, bound to Natal, and was due to an epidemic of influenza associated with pneumonia. Though there was a considerable diminution in the number of steamers engaged in the emigration trade it is satisfactory to note that there was a marked decrease in the death-rate. This cannot, however, be looked on as anything but a remarkable exception to the general rule that the speedier the voyage the less the sickness *en route*.

Returned emigrants.

9. During the year under report 7 colonies returned emigrants to India as against 6 in 1897, the number being 3,502 as against 3,750 in the previous year. There were 8 births on the return voyage, and 66 or 1·88 per cent. of deaths as against 95 or 2·53 per cent. in 1897—again a satisfactory feature of the emigration returns of the year.

The following table shows the total number of emigrants who returned from each of the colonies during the year under review, the aggregate savings, and the average saving per head :—

Colonies.	Number of souls embarked at colony.	Savings.	
		Aggregate.	Average amount on the number embarked (columns 2 and 3).
1	2	3	4
		Rs. A. P.	Rs. A. P.
Demerara ...	1,558	2,14,403 4 2	137 9 9
Trinidad ...	747	1,06,061 11 10	141 15 8
Mauritius ...	433	6,451 0 0	14 14 4
Natal ...	116	18,051 2 3	155 9 9
Fiji ...	393	90,337 14 0	229 13 10
Surinam ...	213	36,390 13 0	170 13 6
Guadeloupe ...	42	3,391 7 3	80 11 11
Total ...	3,502	4,75,087 4 6	135 10 7

These figures are of some value and interest, but the Lieutenant-Governor was surprised to find in the course of some enquiries last spring how greatly the savings of emigrants in the same ship varied, and how large was the number of those who came home with practically no savings at all. As long as some men are thrifty and some are not, there must be variations of the sort, but he had hoped to find a more uniform standard of prosperity among returning emigrants than these enquiries disclosed. Dr. Banks has the comfort of the emigrants constantly at heart, but it is necessary that he and the Government should know more than they do about the prospects the several colonies hold out. To this end the Lieutenant-Governor would be glad if the Protector would continue these enquiries in all returning ships to ascertain what proportion has not saved, and so far as he can, the reasons that have led to failure.

10. In consequence of remarks to the same purport last year, the Protector of Emigrants has prepared the following curious table:—

Particulars of emigrants resident in the colonies.

Name of Colony.	Total number of the resident Indian population in colony at end of 1897.	Number of immigrants who arrived in, or were on their way to, the colony during 1898.	Immigrants returned to India during 1898.		Savings of the total number of immigrants resident in the colony at end of 1897.	Average savings per head of immigrants resident in the colony at end of 1897.	Remarks.
			Number.	Average savings per head.			
1	2	3	4	5	6	7	8
				Rs. A. P.	£ S. D.	£ S. D.	
Demerara ...	116,633	2,380	1,558	137 9 9	164,403 7 7	1 8 2	The entries in column 6 represent only the ascertained savings of the immigrants. Loans to shopkeepers and others, and investments in cattle and farms, probably account for a large portion of their actual savings.
Trinidad ...	88,057	1,268	747	141 15 8	89,378 6 8	1 1 3	
Mauritius ...	260,542	.....	433	14 14 4	257,363 16 0	0 19 9	
Natal ...	54,561	1,390	116	185 9 9	20,944 15 0	0 7 8	
Fiji ...	11,960	567	393	229 13 10	19,428 5 4	1 12 5	
Jamaica ...	14,079	.....	.....	.....	22,231 6 4	1 11 6	
St. Lucia ...	155	.....	.....	.....	28 11 3	0 3 8	
Surinam ...	9,238	618	213	170 13 6	19,410 17 6	2 1 11	
Reunion ...	16,066	.....	.....	.....	7,335 6 10	0 9 1	
Guadeloupe ...	15,399	.....	42	80 11 11	3,190 5 5	0 4 1	

It cannot be said that this compilation adds much to the information on the matter. The returns of their savings made by the emigrants in the several colonies are probably most fragmentary. If they are to be believed, Mauritius pays the emigrant very well, and it is only those who completely fail, who ever leave it. But it is through inconsistencies of the kind that the Protector will be guided in his enquiries, and the Lieutenant-Governor trusts that information will thus be gradually accumulated of some real value as to the relative advantages of the different colonies. He notes for the meantime, that though the Protector does not consider that any reliable conclusions can be drawn from the figures in this and the preceding statement, he regards the position and prospects of the resident immigrants in Fiji and in the West Indian colonies as being the most favourable.

Administration of estates.

11. The aggregate number of estates belonging to emigrants under administration was 614, valued at Rs. 60,535-2-6. Of these, 457 estates, valued at Rs. 35,254-5-9, were finally administered, the sum of Rs. 21,505-9-4 having been paid to the heirs in respect of 233 estates, while the sum of Rs. 13,748-12-5, standing at the credit of the remaining 224 estates, lapsed to the Indian and Colonial Governments concerned, owing, in some cases, to absence of heirs and in others to the impossibility of tracing them under the false descriptive particulars furnished by the emigrants at the time of registration. Besides the final disposal of the above 457 estates, heirs were traced in respect of 36 estates, valued at Rs. 11,287-9, and the sums due will be paid. Enquiries for heirs were therefore completed in respect of 493 estates, or 80 per cent. of the total number of estates under administration as against 381 estates or 58 per cent. in 1897. Enquiries regarding the remaining 121 estates, valued at Rs. 13,993-3-9, had not been completed by the close of the year. The Protector acknowledges the valuable assistance rendered by District Officers in connection with the tracing of relatives of deceased emigrants.

Financial.

12. The receipts amounted to Rs. 18,692, showing a reduction of Rs. 5,811-11-10, as compared with those of the previous year, while the charges amounted to Rs. 29,059-10-6, being an increase of Rs. 672-13-11. The year closed with a deficit of Rs. 10,367-10-6, due chiefly to the smaller number of emigrants having been despatched to the colonies than in the previous year.

13. The thanks of Government are due to Dr. Banks for the manner in which he performed his duties as Protector of Emigrants during the year under report.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

SYSTEM OF VERNACULAR EDUCATION IN THE CENTRAL PROVINCES.

GENERAL DEPARTMENT—EDUCATION.

RESOLUTION—No. 2003.

Calcutta, the 11th July 1899.

THE following careful and interesting report on the system of Vernacular Education in the Central Provinces submitted by Mr. Alexander Pedler, F.R.S., now Director of Public Instruction, Bengal, is published for general information, with reference to Government Resolution No. 1921, dated the 1st July 1899, concerning the question of remodelling the existing system of Vernacular Education, published in the *Calcutta Gazette* of the 5th July 1899.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secy. to the Govt. of Bengal.

SHORT REPORT

ON THE

SYSTEM OF VERNACULAR EDUCATION

IN THE

CENTRAL PROVINCES

BY

ALEXANDER PEDLER, F. R. S., &c.

Preliminary description and general consideration of the system.

AFTER a few preliminary enquiries at Nagpur I decided to investigate the conditions of vernacular (primary and middle school) education in the Central Provinces for the past 18 years only. In this I was guided by the fact that up to about the year 1880, no attempt was apparently made to introduce any of what may be called the modern ideas and methods in educational matters into the system employed. Hence, it did not appear necessary to go back beyond this date in my enquiry. From 1880, however, the ruling authorities in the Central Provinces appear to have appreciated the fact that modern methods had begun to differ largely from the older style of education, and they hence began to introduce changes.

They first took up the necessity of physical training in schools in addition to the ordinary subjects of mental training, and from about this date (1880) drill began to be taught in schools, and it has been since steadily encouraged, while more lately it has been reduced to a complete system. At first apparently the methods of drill were partly on European models, but it has been found that the native systems of drill and exercise are more popular, and hence a book has been prepared and issued (in 1897-98) called the *Deshi Kasarat*, which is the manual for drill in all primary and vernacular schools in the Central Provinces.

I had personal opportunities of witnessing the system of drill in six schools (five boys' and one girls'), and I confess to have been very much surprised by the systematic way in which the drill was done and by the excellence of the exercises. In the girls' school* I may mention the system was more or less European, but in the case of the boys' it was purely native drill and gymnastics.

* Under the charge of an English Missionary Lady.

It appeared to me that this very complete and definite system of drill has had a most excellent effect on the tone of the schools, and also on the physique of the children. I am also of opinion that this drill has given to the schools a discipline which is very much superior to that found in the schools of Bengal. The pupils were smartly obedient to orders, both at drill and also in the school classes, and the attitudes and motions of the body and limbs in the

drill were quickly and accurately gone through in a most systematic manner in obedience to brief commands. In passing I may point out that the system introduced in the Central Provinces has no connection or resemblance to military drill, but that it is only intended to exercise thoroughly the various muscles and parts of the body. No apparatus is required for this drill, and hence there has been and would be absolutely no expense in its introduction into schools.

I need hardly point out the very great influence which such a system of drill has upon discipline. Drill is indeed one of the best, if not quite the best, means of teaching and enforcing discipline and obedience in schools, but in the schools in Bengal this valuable aid to sound education has been to a great extent disregarded and neglected, or at all events it has never been really encouraged to the extent it should have been.

As this is a portion of education which costs nothing, and can be introduced with practically no preliminary arrangements or training, there does not seem to be any reason why a system of drill should not at once be made compulsory in Bengal in all schools from the primary stage upwards. All that would be necessary would be to prepare a work or description of the drill to be used, like the *Deshi Kasarat* employed in the Central Provinces, and to circulate it to all schools. The cost of the *Deshi Kasarat* is 1 anna 6 pies only.

Arrangements having been made to improve the discipline and physical condition of the pupils, a few years later the authorities of the Central Provinces introduced changes with the object of improving the educational methods used in schools, and in this they kept in view that it is necessary in education not only to train the memory and reasoning powers, but also to train habits of observation, thought and inference, and also to train the hand and eye. Hence about 1887, in addition to the ordinary subjects of school teaching, the subject of drawing (hand and eye training) was introduced in all schools, and this was followed in 1888-89 by the introduction of the methods of kindergarten teaching, object-lesson teaching, science teaching (physical science in middle town schools and agriculture in rural primary schools) and also by the introduction of manual training.

The subjects which were taught under the head of manual training were (1) clay modelling, (2) paper-cutting and pattern-forming, (3) cardboard work, and (4) wood work or sloyd. As before stated, manual training in schools was introduced as a compulsory subject by Sir A. Mackenzie in 1888-89, but in the year 1891-92 it was specially relegated to the class of optional subjects, and to a great extent neglected and almost abolished under the orders of Sir A. P. McDonnell. Hence this subject was scarcely given a fair trial, as it was only taught for two years; but the evidence showed that clay modelling and paper-cutting, &c., were distinctly popular and useful, though cardboard work and wood work were less congenial. The opinion of the Inspector of Schools, who was deputed to show me the educational system of the Central Provinces, was to the effect that though it might have been a little premature to introduce manual training broadcast and compulsorily into the schools in 1888-89, yet its almost practical abolition in 1891-92, when it had really begun to gain a hold on the schools, was a great mistake, and decidedly retrograde in character.

Though manual training of the forms mentioned has almost disappeared from the ordinary schools, yet it is still taught in the normal schools for teachers, and I saw good paper-cutting, pattern-forming, &c., in progress in the Nagpur Normal School. I also saw the remains of manual training work in the village, &c., schools, and in some of them the clay objects modelled, &c., are still kept for inspection and are fairly good.

The remaining four subjects, which may be taken as being modern subjects or methods of education, namely, drawing, kindergarten teaching, object-lesson teaching, and science teaching (physical science and agriculture), are still in use in many, if not almost all, the vernacular schools, and on the whole the results obtained appear to be decidedly satisfactory. The details of such teaching will be included under the description of the work done in the various classes of schools in a later section of this report.

About 1894 complaints appear to have been received to the effect that the number of subjects to be learned, and the length of the instruction in vernacular schools had become too great, and the plan was then adopted of dividing the subjects into compulsory and optional, and into subjects to be taken by

town schools and those in rural districts. In the case of the schools away from towns, &c., they are practically almost all of the upper primary class, and for the primary rural schools the compulsory subjects now in use are reading, writing, arithmetic, and geography, and the optional subjects grammar, object lessons or elementary science, kindergarten occupations, manual training, and drawing. In addition, in the readers which are employed under the head of reading in classes III and IV, agriculture and the elements of science necessary for the explanation of the agricultural facts, as well as elementary sanitation, are included, and these do not, therefore, appear as separate subjects in the curriculum, for they are part of the compulsory course. In the case of the optional subjects mentioned, practically all except manual training are now taught in almost all schools.

In connection with the study of agriculture, it should be mentioned that in all the schools I saw where agriculture was taught, there were school gardens attached. These gardens are divided into plots, which have to be kept in order usually by two boys working jointly. Most of these school gardens were really very good, and were well kept up.

The schools situated within municipalities and towns are usually of the class of middle schools, and the curriculum for the middle schools is slightly different from that detailed above. In the classes up to and including class IV, corresponding to the upper primary standard, drawing is compulsory. In addition to reading, writing, arithmetic, and geography, object-lessons are also compulsory in the first three classes, while for class IV to VI completing the middle course, a certain amount of science is taught, the text-book in classes V and VI being a translation of Balfour Stewart's Primer of Physics. In class IV or the upper primary class an elementary knowledge of animals and plants and of metals and of other substances used in the arts and manufactures is required.

The optional subjects for the vernacular middle town schools are kindergarten occupations, manual training, drawing, surveying, and mensuration in classes V and VI, history in classes III to VI, and geometry and algebra in class VI. Sanitation and agriculture are again included in the ordinary reading lessons in the text-books prescribed for middle schools, but in the case of agriculture it is only intended to be taken in urban schools. Of the optional subjects, kindergarten and drawing are practically always taken up, while the other subjects which are read in the schools vary under different local circumstances.

In the case of vernacular girls' schools needle-work is compulsory in addition to reading, writing, arithmetic, and geography, while the optional subjects are grammar, object-lessons or elementary science, kindergarten occupations, manual training and drawing. Sanitation is again included in the readers used, and is thus a compulsory subject. In the girls' schools the needle-work is said to be good, and among optional subjects kindergarten is well taught.

The method of the introduction of the new subjects into the schools appears to have been simplicity itself, inasmuch as a simple departmental order was issued that such subjects should be taught in the future in all schools under the authority of Government and in those receiving public aid. At the same time, the subjects were introduced into the normal schools, so as to gradually provide trained teachers, and from year to year a considerable number of mufassal teachers were called in from their schools to receive special courses of instruction at the normal and other training schools.

As this method had the disadvantage that for a time a good deal of the teaching would have been given by persons not actually trained or instructed in such subjects, it was arranged to have conferences of Inspectors and Deputy-Inspectors and of masters, district by district, each conference lasting about three weeks, at which such subjects as kindergarten work, object-lessons, drawing, manual training, slojd, &c., were thoroughly explained to the masters to enable them to pass on the instruction to the schools. At a later date also agricultural conferences for enforcing the teaching of simple agricultural facts were held among the masters, &c.

The methods of supplying trained teachers in the schools in the Central Provinces are, however, much more satisfactory than in Bengal. No person is now allowed to commence a career as a paid public teacher or would be

allowed as a new teacher to present pupils for a reward from public money, unless he has passed the departmental examination or tests as a teacher. The school teachers are naturally when compared with those in Bengal few in number,* but the training schools in the Central Provinces have been steadily turning out a good supply of trained teachers, so that at the present time about 75 per cent. of the masters in the primary schools have actually passed the departmental test as qualified teachers. The details as to the methods of training teachers and the courses followed in normal schools will also be referred to later on.

* There are only about 2,200 schools, I believe, in the Central Provinces.

It is probable that at first the teaching of the new subjects was decidedly poor, but owing to the steps which have been taken, it appeared to me that the teaching was now carried on fairly satisfactorily, and at all events that the teaching was far better than in the great majority of schools in Bengal.

A very important point to be considered with regard to the modernising of the education in the Central Provinces is its cost. In certain previous discussions which have been laid before the Bengal Government when the Central Provinces' system was compared with that in Bengal, a very strong opinion was put forward that the modern system of education was very costly. I therefore made very particular enquiries on the subject of the expenditure to try to ascertain whether the introduction of the modern subjects and system had been attended by an increase in the cost of education per head of pupils. It appears to be true, and I was assured that such was absolutely the case, that practically no increased cost has been thus incurred, and that it is practically as cheap to educate by modern methods as by those which are more or less antiquated. It is desirable that this point should be made perfectly clear, and I therefore asked for several sets of statistics from the Central Provinces bearing on this fact.

I much regret to state that though this report has been somewhat delayed, the statistics have by a misunderstanding not been supplied. The report is therefore submitted without them, and a supplementary note can be added later on if found necessary.

The following figures however which are extracted from the annual reports on education in the Central Provinces may be considered to prove this point sufficiently clearly. The figures relate to the average cost of education of each primary pupil year by year in all the schools in the Central Provinces, and show in the first column the total cost of education, and in the second the cost to Government of each such primary pupil.

Cost of educating a pupil in the Primary Schools in the Central Provinces.

Year.	Total cost of educating each pupil.	Cost to Government.
1	2	3
	Rs. A. P.	Rs. A. P.
1886 ...	3 4 8	0 12 5
1887 ...	3 6 7	0 13 2
1888 ...	3 6 9	0 15 8
1888-89 ...	3 5 7	0 15 3
1889-90 ...	3 4 11	0 15 10
1890-91 ...	3 6 5	0 14 2
1891-92 ...	3 5 8	0 13 4
1892-93 ...	2 13 1	0 8 8
1893-94 ...	2 11 10	0 11 9
1894-95 ...	2 12 7	0 10 4
1895-96 ...	2 12 10	0 10 2
1896-97 ...	2 14 5	.....*

* Not given in quinquennial report for 1896-97.

Indeed it might be almost possible from these figures to argue that education by modern methods is, if anything, less costly than by the older methods.

Details of work in Schools.

The following are the classes of schools which were inspected and considered on my visit to the Central Provinces:—

Primary schools,
Middle „
Girls' (primary) schools,
Normal or training schools,
Agricultural training schools,

all of which form part of the scheme for vernacular education in that province.

Having given previously a brief outline of the changes which have been made in the system, it is now proposed to state briefly a few facts with reference to the courses of instruction followed in each of the classes of schools, and to point out more in detail those portions of the work in which the methods followed differ considerably from those in use in Bengal, and which appear to be improvements on the Bengal system.

In the bare outlines of the scheme of education, the system followed in the Central Provinces shows great similarity to that existing in Bengal. Thus the primary education is divided into two stages—

(1) The Lower Primary. | (2) The Upper Primary.

But there is this difference that while in Bengal the great majority of schools are of the lower primary class, and having started as lower primary schools remain as such, in the Central Provinces if a school is started as one of the lower primary standard, every effort is made to raise it quickly to the upper primary standard.

Here undoubtedly the advantage rests with the Central Provinces' method.

There is, however, in Bengal a rather greater difference between the lower primary and upper primary standards than is the case in the Central Provinces.

In lower primary schools in Bengal we have the classes "B Standard" and "A Standard" and the lower primary class. These exactly correspond to the three classes belonging to the lower primary school in the Central Provinces. In Bengal there is above the lower primary class a higher class (class II) and then the upper primary class, but in the Central Provinces the pupils of class III, the lower primary class, pass at once into class IV or to the upper primary standard. That is in Bengal it takes five years to reach the upper primary standard while in the Central Provinces it takes only four years.

Above the upper primary standard in Bengal we have the second class of a middle school and then the first class in the middle school standard, which is exactly parallel to the system in the Central Provinces, where the V and VI classes rise to the middle standard. Usually, as in Bengal, promotions are made once a year, and thus while six years are given in the Central Provinces to reach the middle stage of education, seven years are usually occupied in the Bengal schools.

The standards of work in middle and primary standards of boys' vernacular schools and also in girls' vernacular schools (which usually only rise up to the upper primary standard), are shown in the following tabular statement. This is the school curriculum as defined in the Central Provinces Education Manual, slightly abridged by the omission of the reading courses in the various vernacular languages met with in the schools.

SUMMARY OF THE CURRICULUM FOR VERNACULAR MIDDLE (TOWN) SCHOOLS.

CENTRAL PROVINCES.

	Class I. One year's course.	Class II. One year's course.	Class III. One year's course.	Class IV. One year's course.	Class V. One year's course.	Class VI. One year's course.
1	2	3	4	5	6	7
			COMPULSORY SUBJECTS.			
1. Drawing (optional after class IV).	Free-hand on slates, straight lines and their combinations, squares, triangles, oblongs.	Free-hand on slates, straight lines and their combinations, a more advanced course.	Free-hand on paper, curved lines and their combinations, easy familiar objects from copies.	Free-hand on paper, leaves, flowers, familiar objects from copies.	.....	.....
2. Reading and Grammar.	The alphabet and reading sheets in Hindi, Marathi, Uriya, Urdu and Telugu, supplied to Departmental schools.					
	Departmental 1st book in various vernaculars.	Departmental Book II in various vernaculars.	Departmental Book III in various vernaculars.	Departmental Book IV. (Revised) in various vernaculars.	The prose part and easy poetry of 4th Departmental Book (old edition) in various vernaculars.	Fourth Departmental Book (old edition), the whole, and Ramayan Aranya or Ayodhya-kand in various vernaculars.
	Recitation of 10 lines of easy verse.	Recitation of 30 lines of easy verse.	Recitation of 50 lines of verse, with explanation of the meaning.	Recitation of 80 lines of poetry with explanation of the subject matter and allusions.	Recitation of 100 lines of poetry, with explanation of the subject-matter and allusions.	Recitation of 140 lines of poetry, with explanation of the subject-matter and allusions.
		Subject and predicate. To be taught in connection with the reading lesson.	Subject, predicate, object, nouns, pronouns, adjectives and verbs. To be taught in connection with the reading lesson.	Analysis of simple sentences, and parts of speech. To be taught in connection with the reading lesson.	The elements of grammar as in any grammar used in the Upper Primary Class of a Government school. Prosody to be omitted. Analysis. To be taught in connection with the reading lesson.	Syntax and prosody. Rules of Sandhi and Samas. Easy derivation to be taught in connection with the reading lesson.
3. Writing and spelling.	Large hand on slates. Letters and words from the reading sheets. Copying words and sentences from the reader, and dictation.	Large hand on paper. To write to dictation from the reader in use.	Text or medium size on paper. To write to dictation from the reader in use.	Small hand. To write to dictation from the reader in use.	Small hand. Dictation from the reading book in use. To write from memory the subject-matter of any short story from the reader in use, or to write a short letter. Books of school exercises to be exhibited, each page to be dated and signed by the pupil.	Small hand. Dictation from the reading book in use. To write a short letter descriptive of some place known to the pupil, or of some event within his experience. Books of school exercises to be exhibited, each page to be dated and signed by the pupil.
4. Arithmetic ...	(1) Instruction in the subject to be by means of the ball-frame or with cowries, the scholars thus being taught by sight and touch. Notation and numeration to 1,000. The multiplication tables to 10×10. Simple addition and subtraction.	(1) Notation and numeration to 10,000. The four simple rules. Multipliers and divisors not to exceed two figures. Multiplication tables to 16 times and fractional tables to 2½. Tables of weights and measures in common use to be learnt and applied.	(1) Simple and compound rules Reduction.	(1) Simple proportion, L. C. M. and G. C. M., vulgar fractions, simple interest, the addition, subtraction, multiplication and division of easy decimals, the conversion of vulgar fractions into decimals and *vice versâ*. Easy problems.	Simple and compound proportion. Vulgar and decimal fractions. Practice, simple interest, square root. Problems.	The whole (excluding stocks, exchange and cube root).
	(2) Mental exercises in the addition and subtraction of pice, annas and rupees, the totals not to exceed Rs. 5.	(2) Mental exercises in the addition and subtraction of pice, annas and rupees, the totals not to exceed Rs. 10.	(2) Mental application of the simple and compound rules and of fractional tables to easy bazar problems.	(2) Mental Arithmetic. Exercises in the ordinary rules for mental Arithmetic as known in the bazar.	Mental arithmetic; a more advanced course.	

	Class I. One year's course.	Class II. One year's course.	Class III. One year's course.	Class IV. One year's course.	Class V. One year's course.	Class VI. One year's course.
1	2	3	4	5	6	7
5. Object lessons or elementary science.	Common objects such as familiar animals, plants, metals and substances employed in ordinary life. (2nd half year).	As in Class I; a more advanced course.	As in Class II; a more advanced course.	An elementary knowledge of animals and plants with special reference to agriculture, and of metals and other substances employed in the arts and manufactures carried on in the district in which the school is situated.	The elements of physical science as in Balfour Stewart's Primer or other suitable text-book, viz., definitions, the chief forces of nature, gravity, the three states of matter, properties solids, liquids and gases, moving bodies.	Revision of the Primer vibrating bodies, heated bodies, electrified bodies.
Geography ...	.....	To explain a plan of the school-room which has been drawn to scale from measurements taken by the children; children to mark on the plan the position of the benches, &c. The 4 cardinal points, a knowledge of the town or village in which the school is situated studied from a map of the locality.	Special knowledge of the geography of the district in which the school is situated, together with ability to point out on the map, the districts, towns and rivers of the Central Provinces.	Geography of the Central Provinces and of India. Outlines of India and the world, the latter with special reference to the British Empire. Map of village and neighbourhood. Size and shape of the Earth. The causes of day and night. Diurnal motion of the Earth.	The geography of the world with special reference to Asia and India. Latitude and longitude, annual motion of the Earth, the seasons, the tides, the monsoons and eclipses to be understood.	(1) The world, with special reference to the British Empire. (2) Map of Europe and the British Isles to be drawn. (3) Elementary Physical Geography, wind, rain, climate, storms, phases of the moon, the solar system.
			OPTIONAL SUBJECTS.			
1. Kindergarten occupations and manual training.	The first 4 occupations.	The first 6 occupations.	1. Modelling in clay, Rick's Book I, Chapter X, pages 59—65. 2. Paper folding, cutting and mounting.	1. Exercises in wood-work with the knife, Rick's Book II, Chapter V, pp. 34, 35, or 2. Modelling in clay, Rick's Book I, Chapter X, p. 66, and models of natural objects proposed by the teacher, or 3. Drawing, cutting and mounting, Rick's Book I, Chapter V.	1. Wood-work, Rick's Book II, Chapter V, paragraphs 35—37, and Chapter VI, paragraphs 41—43, or 2. Folding, cutting, mounting, designing in form and colour, Rick's Book I, paragraphs 41—45, and similar exercises. Drawing and cutting geometrical forms, Book I, Chapter VIII, or 3. Drawing, colouring, &c., Rick's Book I, Chapter VI, or 4. Modelling in clay as in Class IV, with greater proficiency.	1. Wood-work, Rick's Book II, Chapter VII, paragraphs 46—53, or 2. Folding, cutting, mounting and designing in form and colour, Rick's Book I, Chapter VII, paragraph 46 and similar exercises, or 3. Modelling in card-board, Rick's Book I, Chapter IX, pages 54—56, or 4. Modelling in clay as in Class V, with greater proficiency.
2. Drawing ...	.....	.....	.....	.....	Free-hand, as in Class IV, a more advanced course. Model drawing. Geometrical drawing, Burchett problems 1 to 30 and problems 33 and 37.	Free-hand and model drawing as in Class V, a more advanced course. Perspective (linear). Geometrical drawing. The construction of the ellipse by means of the trammel. Burchett Revision, and problems 1 to 105, omitting numbers 6, 13, 16, 34, 35, 36, 39, 41, 43, 44, 45, 48, 50, 51, 52, 55, 57, 58, 59, and 60.
Mensuration ...	.....	.....	.....	.....	Surfaces ...	Surfaces and solids.

	Class I. One year's course.	Class II. One year's course.	Class III. One year's course.	Class IV. One year's course.	Class V. One year's course.	Class VI. One year's course.
1	2	3	4	5	6	7
4. Geometry ...	.....	.....	.....	.....	.....	26 Propositions of the 1st book of Euclid, with easy exercises.
5. Algebra ...	.....	.....	.....	.....	.....	First four rules. Factors, L. C. M., and G. C. M. Easy fractions, and simple equations.
6. History ...	.....	.....	.....	India, the English period.	The main facts of the History of India.	Hunter's History of India, or other similar Text book, the whole.
7. Surveying (where practicable).	.....	.....	.....	.....	With plain-table and cross-staff.	With plain-table and cross-staff.
8. Sanitation ...	.....	.....	.....	Taught from lessons in 3rd and 4th Readers.	.....	.....
9. Agriculture (in urban schools).	.....	.....	.....	Taught from lessons in 3rd and 4th Readers.	Taught from lessons in 3rd and 4th Readers.	Taught from lessons in 3rd and 4th Readers.

NOTE.—(1). Not more than three optional subjects can be taken.
(2). *Sanitation* and *Agriculture* appear as optional subjects in the curriculum of Middle (Town) Schools; they are taught as part of the ordinary reading lessons from the 3rd and 4th revised Readers, in which are incorporated Fuller's "Agricultural Primer" and "The Way to Health."

SUMMARY OF THE CURRICULUM FOR PRIMARY (RURAL) SCHOOLS.

CENTRAL PROVINCES.

	Class I. One year's course.	Class II. One year's course.	Class III. One year's course.	Class IV. One year's course.
1	2	3	4	5
		COMPULSORY SUBJECTS.		
Reading	The alphabet and reading sheets in Hindi, Marathi, Uriya, Urdu and Telegu, supplied to Departmental schools.			
	Departmental 1st book in various vernaculars.	Departmental Book II in Various vernaculars.	Departmental Book III in various vernaculars.	Departmental Book IV in various vernaculars.
	Recitation of 20 lines of easy verse.	Recitation of 40 lines of easy verse.	Recitation of 60 lines of verse, with explanation of the meaning.	Recitation of 80 lines of poetry with explanation of the subject matter and allusions.
2. Writing and spelling ...	Large hand on slates, letters and words from the reading sheets. Copying words and sentences from the Reader, and dictation.	Large hand on paper. To write to dictation from the Reader in use.	Text or medium size on paper. To write to dictation from the Reader in use.	Small hand. To write to dictation from the Reader in use.
3. Arithmetic	(1) Instruction in the subject to be by means of the ball-frame or with cowries, the scholars thus being taught by sight and touch. Notation and numeration to 1,000. The multiplication tables to 10 × 10. Simple addition and subtraction. (2) Mental exercises in the addition and subtraction of pice, annas and rupees, the totals not to exceed Rs. 5.	(1) Notation and numeration to 10,000. The 4 simple rules. Multipliers and divisors not to exceed 2 figures. Multiplication tables to 16 times and fractional tables to 2½. Tables of weights and measures in common use to be learnt and applied. (2) Mental exercises in the addition and subtraction of pice, annas and rupees, the totals not to exceed Rs. 10.	(1) Simple and compound rules. Reduction. (2) Mental application of the simple and compound rules and of fractional tables to easy bazar problems.	(1) Simple proportion, L. C. M. & G. C. M., vulgar fractions. Simple interest. Easy problems. (2) Mental Arithmetic. Exercises in the ordinary rules for Mental Arithmetic as known in the bazar.

2. Writing and spelling.	Large hand on slates. Letters and words from the reading sheets. Copying words and sentences from the Reader and dictation.	Large hand on paper. To write to dictation from the Reader in use.	Text or medium size on paper. To write to dictation from the Reader in use.	Small hand ... To write to dictation from the Reader in use.	Small hand. Dictation from the reading book in use. To write from memory the subject-matter of any short story from the Reader in use, or to write a short letter. Books of school exercises to be exhibited, each page to be dated and signed by the pupil.
3. Arithmetic ...	(1) Insruction in the subject to be by means of the ball-frame or with cowries, the scholars thus being taught by sight and touch. Notation and numeration to 1,000. The multiplication tables to 10 × 10. Simple addition and subtraction.	(1) Notation and numeration to 10,000. The 4 simple rules. Multipliers and divisors not to exceed 2 figures. Multiplication tables to 16 times and fractional tables to 2½. Tables of weights and measures in common use to be learnt and applied.	(1) Simple and compound rules. Reduction.	(1) Simple proportion, L. C. M. and G. C. M., easy vulgar fractions. Easy problems.	Simple and compound proportion, vulgar and decimal fractions. Simple interest. Problems.
	(2) Mental exercises in the addition and subtraction of pice, annas and rupees, the totals not to exceed Rs. 5.	(2) Mental exercises in the addition and subtraction of pice, annas and rupees, the totals not to exceed Rs. 10.	(2) Mental application of the simple and compound rules and of fractional tables to easy bazar problems.	(2) Mental Arithmetic. Exercises in the ordinary rules for mental arithmetic as known in the bazar.	Mental arithmetic; a more advanced course.
4. Geography ...	.....	.....	Definitions. Outlines of the Central Provinces. Map of school-room.	Revision—Geography of the Central Provinces and of India. Outlines of India and the World. The latter with special reference to the British Empire. Map of village and neighbourhood. Size and shape of the Earth. The causes of day and night.	The geography of the world with special reference to Asia and India. Latitude and longitude, annual motion of the earth, the seasons, the monsoons, and eclipses to be understood.
5. Needlework ...	Threading needles and hemming (to be fixed by the teacher).	Running, stitching and top-sewing (to be fixed by the teacher). Knitting on two needles.	Felling, gathering to sew a child's jacket (fixed by the teacher), to knit a scarf, plain and purl.	Mending, herring-boning, to set and sew a child's jacket, knitting on 4 needles, cross-stich.	To cut out, fix and sew a petticoat, jacket, bodice, knit socks, copy cross-stitch from a pattern, button-holing.
			OPTIONAL SUBJECTS.		
1. Grammar ...	.....	.....	Parts of speech ..	Analysis of simple sentences. Inflection of nouns, pronouns and adjectives.	The elements of grammar as in any grammar used in the Upper Primary Class. Analysis.
2. Object lessons or Elementary Science.	Common objects, such as familiar animals, plants, metals and substances employed in ordinary life. (2nd half-year.)	As in Class I, a more advanced course.	As in Class II, a more advanced course.	An elementary knowledge of animals and plants with special reference to agriculture, and of metals and other substances employed in the arts and manufactures carried on in the district in which the school is situated.	The elements of physical science as in the Balfour Stewart's Primer or other suitable text-book, *viz.*, definitions, the chief forces of nature, gravity, the three states of matter, properties of solids, liquids and gases, moving bodies.
3. Kindergarten occupations and manual training.	The first 4 occupations.	The first 6 occupation.	1. Paper folding, cutting and mounting.	1. Drawing, cutting and mounting, Rick's Book 1, Chapter V.	1. Folding, cutting, mounting, designing in form and colour, Rick's Book 1, paragraphs 41—45, and similar exercises, or— 2. Drawing, colouring &c., Rick's Book I, Chapter VI.

	Class I. One year's course.	Class II. One year's course.	Class III. One year's course.	Class IV. One year's course.	Class V. One year's course.
1	2	3	4	5	6
4. Drawing ...	Free-hand on slates, straight lines and their combinations, squares, triangles, oblongs.	Free-hand on slates, straight lines and their combinations, a more advanced course.	Free-hand on paper, curved lines and their combinations, easy familiar objects from copies	Free-hand on paper, leaves, flowers. Familiar objects from copies.	Free-hand as in Class IV, a more advanced course. Model drawing, Geometrical drawing. Burchett Problems 1 to 30 and Problems 33 and 37.

NOTE 1.—Not more than two optional subjects can be taken.
2.—Sanitation is taught from the reading lessons in the 3rd and 4th revised Readers; the lessons on agriculture should be omitted.

Taking the course up to the Upper Primary and Middle Vernacular standards, the subjects in which the main differences occur between the courses of work in the schools in Bengal and the Central Provinces are the following :—

(1) Drill, not shown in the printed curriculum.
(2) Drawing (hand and eye training).
(3A) Agriculture.
(3B) Physical Science.
(4) Kindergarten teaching.
(5) Object-lessons.
(6) Manual training.

A few remarks may be written on each of these subjects.

1. *Drill*, which is carried on systematically in every class of schools, and which has been attended with most satisfactory results. The text-book of drill and gymnastics, "Deshi Kasarat," in Hindi and other vernaculars was issued in 1897-98.

A brief statement of the nature of the work done in boys' schools will be submitted later on. The actual book is being translated into English, and a few copies of the translation will be printed so that it may be considered by the Committee on Vernacular Text-Books, which is sitting, and the Committee will discuss its suitability for introduction into Bengal schools.

In the case of girls' schools the system of drill followed is different from that in the boys' schools, and instead, perhaps, of using the term drill, it would be more correct to say the girls are practised in action songs and calisthenics. Some of the exercises gone through by the girls were, however, very satisfactory. Practically a very simple modification of the exercises used in an English girls' school would be sufficient for Indian girls' schools. No special book for this appears necessary at present in the case of Bengal schools.

2. *Drawing* (*hand and eye training*).—This is a second point in which the Bengal schools might take a wholesome lesson from those in the Central Provinces. In my inspection I found that in some Central Provinces' schools the drawing of boys in the primary classes was fully equal to, and indeed sometimes superior to, the drawings done by boys in Bengal in the first class of zilla schools, and who are presenting themselves in the drawing standard of the Calcutta Entrance Examination.

In the schools in the Central Provinces, ordinary kindergarten drawing is taught in the lowest classes, and from about class III ordinary freehand drawing from copies is practised. In the teaching of drawing in class I or classes I and II, a kindergarten blackboard (ruled in one inch squares) is used in the schools, the cost of which is about Rs. 4, while in the case of drawing from copies, at first the "South Kensington" copies were supplied to the Central Provinces' schools, but these have been replaced by cards with locally prepared lithographic copies of figures, &c., and on the back of these cards the directions or instructions to be given by the teacher, and which are required for the work of copying, are given in the various vernaculars. The cost of these copies (about 30 or 40 in number) is only Re. 1-14. Beyond this there is no extra cost to the school; for in the kindergarten drawing the copies are made on the children's slates, and in the higher drawing the pupils provide their own pencils and drawing-books, the latter costing only one anna each.

There therefore again appears to be every reason why drawing should be introduced into Bengal schools.

3A. *Agriculture* is another subject which is highly important in a country like India, and while fairly well taught in an elementary manner in the vernacular schools in the Central Provinces, it is scarcely considered or studied in Bengal schools.

The portions of the readers for the third and fourth classes in the schools in the Central Provinces curriculum, which deal with agriculture, are based on "Fuller's Agricultural Primer adopted for use in elementary schools or classes in the Central Provinces." The following are briefly the subjects which are discussed in this Primer:—

Lesson or Chapter I.—The similarity between the growth of animals and plants.

Lesson II—V.—The different parts of a plant.

Lesson VI.—Plants, like animals, grow by feeding.

Lesson VII—XV.—The three chief requisites for successful cultivation—(1) good seed, (2) plant food, (3) careful protection.

Lesson XVI.—On agricultural machinery and implements.

Lesson XVII.—The management of farm cattle.

Lesson XVIII.—The law of landlord and tenant.

There are also certain appendices on common cattle diseases.

In order to ensure that this portion of the teaching is not considered to be simply an oral lesson, only to be committed to memory and not understood, special circulars have been issued to the normal schools for teachers, etc., which detail the nature of the practical teaching which should be attempted by the village school-masters. A free translation into English (with explanatory remarks) of one of the special vernacular agricultural circulars (illustrated by diagrams) is appended, so that it may be clearly seen how far the experimental or practical portion of agricultural work is pushed. Hence it will be seen the teaching of agriculture in the primary schools in the Central Provinces has its practical as well as theoretical side.

KRISHI PRAYAG DARPAN

OR

A GUIDE TO THE AGRICULTURAL EXPERIMENTS

IN THE

VILLAGE SCHOOLS, CENTRAL PROVINCES.

EXPERIMENTS NOS. 1 AND 2.

Bottle culture

Pictures A and B

Apparatus required.—Two bottles; two corks with a hole in the middle and split on one side up to the middle hole; a few seeds of any grain you want to germinate; a small basin; thin blotting paper; water; manure or soil; wrapping paper.

Experiment A.—In the basin supplied place a piece of thin blotting-paper and moisten it with water and then place the seeds on it. Cover the seeds with another piece of blotting paper, also moistened with water Keep the blotting-paper always moistened with water, and in about four or five days the seeds will germinate and will be soon fit for removal.

Take the bottle and the cork. Introduce the young plant through the slit of the cork into the middle hole of it, and put a little piece of cotton-wool in the hole so that the plant may not fall down or through the hole. Put the cork into the bottle so that the roots of the plant may reach the water in the bottle. Wrap a piece of paper round the bottle, and then keep it in an airy and well lighted place.

Change the water once in two or four days. The plant will grow for a time and then will begin to fade away, and finally will die altogether.

Experiment B.—Arrange everything just like in the experiment A, but while changing the water put plant food* into it.

* Plant food may thus be prepared:—

Take some fertile soil or good manure (cow-dung manure is best) and place it in a bucket full of water. The soil or the manure will mix itself in water, and after a few hours all the soluble portions of plant food in the soil or the manure will be dissolved in water. Then filter the muddy water through blotting paper until it is clear, or simply pour off the clear water free from the sediment at the bottom of the bucket. Keep this water in a bottle and use it for this experiment.

In this case the plant will grow in just the same manner as if it were planted in the ground. But its roots being always in water, which is not the case with the plant in the ground, it will not be equally vigorous and productive.

What we learn from this experiment is that roots of plants take in plant food dissolved in water, while the plant in the experiment A lived for a short time only and died away as there was no food in the water.

MAGNIFYING GLASS.

PICTURE No. 3.

The magnifying glass is intended for showing the small parts of a flower, etc., as detailed in the reading book. Experiments with the magnifying glass are made frequently throughout the course.

EXPERIMENT IV.—*Osmose.*

Every plant is formed of cells (use of magnifying glass). At the end of the root of a plant there is a cell which takes the nourishment of the plant in. It is in fact a closed bag, and sucks in the plant food little by little when the food is presented to it dissolved in water.

This experiment is to show that a thinner or less dense liquid passes through a membrane into the thicker or denser liquid in larger quantity than the dense liquid passes outwards; in other words, plant food dissolved in the water in soil may pass into the roots of a plant.

PICTURE No. 4.

Apparatus required :—A wide-mouthed bottle ; a tube open at both ends, the one end enlarged to the shape of a funnel; bladder; sulphate of copper, or milk, or solution of honey or treacle.

First fill the bottle with common drinking water, and then prepare a strong solution of sulphate of copper. Tie over the enlarged end of the tube with the bladder by means of string tied tightly, so that air may not enter, and then fill this tube with the strong solution of sulphate of copper, or with milk, or with solution of honey or treacle, and then dip the widened end into the water in the bottle, and hold it in its place by means of a cork. Mark the place where the liquid in the tube stands now (A). After half an hour or so the liquid will rise in the tube above the point (A), showing the liquid from the bottle has entered into the tube. On the other hand, it will be seen a small quantity of the liquid from the tube has passed into the bottle, as the water in the bottle is coloured with milk, etc., but that the quantity passing outwards is smaller than that passing inwards is shown by the rise of the liquid in the tube.

This process is called osmose. By this process the plants take their food from the water in the soil by means of their roots.

TRANSPIRATION.

EXPERIMENT No. 5.

To show the process of transpiration (or perspiration) through the pores of the leaves, etc., of plants. Note—The hard stems of plants have not the power of transpiration.

Apparatus required :—A good transparent glass jar or bottle, and an earthen pot containing a plant with healthy leaves.

Place the glass over the plant, and expose the whole apparatus to bright sunlight or daylight. After half an hour you will see the inner surface of the vessel quite dim with the watery vapour exuded from the leaves of the plant. The cold of the glass gradually condenses the vapour, which begins to flow down from the inner surface of the glass, showing that watery vapour is always exuded from the surface of plants. This action of the leaves of plants is called transpiration.

(Watery vapour is exuded not only from green leaves, but from other green portions of the stem through interstices called stomata.)

EVOLUTION OF OXYGEN FROM PLANTS.

EXPERIMENT No 6.

To show that living plants in the form of green leaves, etc., have the power of decomposing carbonic acid dissolved in water, etc., and of assimilating the carbon while setting free the oxygen, which is again added to the atmosphere.

Apparatus required :—A large bottle with a wide mouth ; a few leaves of any plant ; a small earthen basin which can hold the mouth of the bottle ; a bucket full of water.

Fill the bottle with water and leaves, and invert it in the basin full of water, so as not to leave any air bubbles at the bottom of the inverted bottle. Keep the bottle with the basin in the strong sunshine for about three hours. You will observe afterwards that some gas bubbles are seen adhering to the back of the leaves. This gas will collect in the upper part of the bottle. This is the oxygen gas evolved by the leaves through the stomata in the action of respiration. That this gas is not common air, but oxygen, may be proved by testing its properties.

The gas will probably relight a chip of wood the end of which is glowing, (*i.e.*, a lighted piece of wood just blown out, but not fully extinguished).

FORMATION OF CHALK FROM LIME-WATER.

EXPERIMENT No. 7.

Apparatus required :—A glass tube of half an inch in diameter and a few inches long ; lime-water ; a glass vessel.

Pour a little lime-water* in the glass vessel, dip one end of the glass tube with your right hand into the solution. Hold the vessel in your left hand. Then blow in air with your mouth. After a few minutes, the clear water will become turbid, and finally will assume a milky appearance, owing to the formation of chalk.† If this milky water were allowed to stand still for a few hours, the chalk will settle down, and clear water will float on its surface.

The following is a list of the apparatus required to be supplied to each primary school for the purpose of such experiments. The list is divided into two parts, the first part containing the apparatus which is essential, and the second part apparatus which it is desirable should also be supplied to each school, if funds permit, to enable further experiments to be performed. The cost of the first set is Re. 1-14, and of the second or non-essential set Rs. 2-12, making altogether only Rs. 4-10.

LIST No. I.

Name of experiment.	Apparatus.	Approximate price.
1	2	3
		Rs. A. P.
1. Bottle culture ...	2 bottles	0 3 0
2. Ditto ...	Magnifying glass ...	1 0 0
3. Osmose	A glass tube ...	0 2 0
4. Transpiration ...	A glass	0 4 0
5. Evolution of oxygen gas from plants.	A big bottle ...	0 4 0
6. Lime-water and formation of chalk.	A tube	0 1 0
	Total ...	1 14 0

* Preparation of lime-water :—Take a few pieces of burnt lime and pour water on them in a vessel. Instantly it will begin to boil and *chunam*, commonly eaten with *pan bida*, is formed. Then pour in some more water, and keep it for a few hours, after stirring it well. Then pour off the clear solution without stirring the lime into a bottle, and use it for experiment.

† Chalk is insoluble in water, while lime is soluble.

Additional apparatus desirable, but not absolutely essential.

List No. II.

Name of experiment.	Apparatus.	Approximate price.
1	2	3
		Rs. A. P.
1. Preparation of carbonic acid gas.	A wide-mouthed bottle, with two tubes, funnel, &c.	1 0 0
2. Preparation of hydrogen gas.	Two beakers ...	0 8 0
	A basin	0 8 0
	Acid sulphuric ...	0 4 0
	,, hydrochloric ...	0 4 0
	Zinc	0 4 0
	Total ...	2 12 0

A very important practical portion in the teaching of agriculture in the Central Provinces is to be found in the fact that in every school where there is the slightest facility for it, a school garden is started. Naturally, these school gardens can be better fostered in the schools in the country than in those in town. The usual plan is for the plot of ground available to be marked out by small low raised banks into a number of separate plots, usually perhaps two or three yards square, and for each plot to be handed over to two of the boys of the school, who have to do practically all the work in connection with the plot in the way of sowing the seeds (usually those of vegetables and flowers), weeding, watering and generally bringing the crops up to maturity, when the produce of such plot of ground belongs to the boys who cultivate it.

The only expense in such a school garden is (1) for laying out the garden in the first instance, (2) for procuring the seeds, and (3) in some cases where water may have to be drawn up from a deep well, &c., a slight cost for part of the time of a cooly to draw up water, &c. As the third is an expense which can usually be avoided, and the second is one, which if the school-master understands his work can be prevented by his collecting and saving the seeds, etc., from the plants that are grown in the garden, practically the cost of a school garden usually reduces itself to the cost of laying it out in the first instance, amounting possibly to Rs. 3, Rs. 5, or Rs. 10 according to the size of the garden. Even this cost may be avoided by the school-master (with the aid of the villagers, &c.) doing the work himself. In the same way any tools required by the boys in the cultivation of their plots can always be borrowed from their own homes.

Definite instructions are issued in the form of circulars to school-masters, etc., on the subject of school gardens, dealing with the soil of the garden, the area wanted, watering, manuring, cultivation, sowing and transplanting, and also indicating the various crops, vegetables, flowers, etc., which may be grown at different seasons of the year in such school gardens.

3(B). It has been pointed out that in town schools agriculture is partly replaced by the teaching of a general elementary course in science in the upper primary standard, while physical science commences after the upper primary standard, and continues through the middle standard. The latter course is to a considerable extent similar to the plan adopted in middle schools in Bengal, where physical science is usually taught. There is, however, one point of difference, inasmuch as in the schools in the Central Provinces apparatus is provided for demonstrating the simple physical facts, while in middle schools in Bengal apparatus for such purposes is usually entirely wanting. On the other hand it is, in my opinion, doubtful whether the selection of the Physical Science Text-Book and of the apparatus to illustrate it in the Central

Provinces schools is quite judicious. In the case of the apparatus given, I am sure the selection is too ambitious, and several of the pieces supplied are not, and could not be, properly used. In Indian schools of this type the apparatus must be of exceedingly simple and inexpensive nature—apparatus which can be renewed or repaired locally in small villages by ordinary bazar artizans. This, however, is not the case in the Central Provinces, and in several cases I saw pieces of apparatus (such as Tate's air-pumps, Magdeburg hemispheres, &c.) out of order, which certainly could not be repaired by the master of the school or by any local artizan, and which were hence quite useless. The cost of the usual simple set of apparatus to teach physical science in middle schools in the Central Provinces is said to be about Rs. 26 or Rs. 27, but in larger towns under rich municipalities as much as Rs. 150 to Rs. 200 is spent for this purpose.

In the case of the science subjects taught in class IV (upper primary class) of the town schools in the Central Provinces, it is partly of the nature of that which is taught as agriculture in village schools and partly elementary natural history, etc. It is only intended in this course to give a slight and superficial knowledge of the materials met with in every-day life. There does not appear to be very much to comment on with reference to this section of the course. The subject and the teaching of it are probably not entirely satisfactory.

4. *Kindergarten.*—Kindergarten methods are used in the lower classes of the schools, and all the teachers who are now sent out from the training schools have to go through this system as a regular part of their instruction. As mentioned previously, kindergarten drawing is practised in the lower classes. Kindergarten or action songs are also encouraged, and in many schools the first six of the kindergarten gifts are employed in teaching. The cost of a set of the first six of Froebel's gifts, as made at Nagpur, is said to be about Rs. 7, but they are also made up in villages by carpenters, &c., for the use of village schools (where they are perhaps not quite so well finished as at Nagpur) for about Rs. 4 only. The following is a short description of the gifts alluded to:—

The first six kindergarten gifts of Froebel are usually—

The first gift of six soft balls, commonly of rubber covered with coloured worsted, but may be of wool only, representing the primary and secondary colours. With these the young pupils are taught to distinguish colours and to become acquainted with differences in material, shape, weight, and the properties of the balls. Games are usually designed in which the balls play a prominent part.

The second gift consists of a sphere, cylinder, and cube in wood. It offers opportunity for comparison first with the rubber balls, and then between the articles which constitute this gift as to shape, etc., etc.

The third gift is a cube (usually two inches) divided once in every way, thus forming eight cubes. With these various exercises in construction, etc., are carried out. The fourth, fifth, and sixth gifts consist of a cube variously divided, and these are used for similar exercises, but more advanced than those of the third gift.

Beyond these, as a rule, the schools do not go, though the seventh gift, a series of thin slabs or tablets, squares, half-squares, equilateral pieces, etc., etc., for making patterns, and the eighth gift a number of small wooden rods used for making figures, letters of the alphabet, etc., would certainly be useful. From the tenth gift (consisting of arrangements for drawing) upwards, practically Froebel's gifts introduce the elements of hand-and-eye and manual training. They illustrate drawing, paper cutting, paper weaving and interlacing, modelling, etc., etc., and these are usually included under these particular headings in schemes of general education. If I might venture an opinion on the kindergarten teaching in the Central Provinces, I should remark that this part has been taken practically bodily from European books, and it is doubtful whether more satisfactory results could not have been obtained by working on Froebel's principle or system, but giving the system, etc., what might be called a local atmosphere. Some of the gifts, in the form of wooden cubes, divided into complicated geometrical sections, are undoubtedly quite unfamiliar to Indian children in their ordinary lives, and it would probably have been better to select materials and objects for kindergarten work which are to be found in

every village, or which are easily within the power of construction of every village school-master.

5. *Object-lessons.*—I found in every village school that I went to small collections of objects which were used for the purpose of object-lessons. Generally also the village school-master had either himself prepared or had persuaded a village carpenter to prepare a small cupboard or box with compartments for storing these objects, most of them being duly named and kept in a particular compartment of the box or cupboard. I heard also one or two object-lessons given by the masters of the schools, but owing to my ignorance of *Mahrathi*, I can give only the general impression that the teachers seemed to know how to set to work to give object lessons.

Again, if I may make a criticism, it is to the effect that possibly the objects chosen might have been selected more judiciously. In some cases, various metals including even such valuable bodies as silver and gold, and the ores of such metals were taken as objects for lessons, and to my surprise gold quartz and silver ore were actually in the collections of some schools. It appeared to me that it would be better if the objects were such that they could all be procured in the school-house or in the immediate neighbourhood of each school, so that there would be no expense in making the collection, and all the objects worked with would be well known. Further, it would be a great advantage if the boys of a school were made to collect objects themselves, which would form part of a small school collection, and which would be used subsequently for the object lessons in the class. These collections could be wholly or partially renewed from year to year by fresh batches of pupils. In this way the children would take much more interest—even a personal interest—in the subject of the object-lessons, as they would deal with objects more or less belonging to them. If the system of object-lesson teaching is extended to Bengal schools, some such plan as this could be tried, for it would be certainly more economical, and probably more interesting and effective as a means of education.

6. *Manual training.*—I regret very much that owing to the discouragement which has been shown to this subject in the Central Provinces since 1891-92, I was unable to see the system at work in any of the village schools. It is, however, still taught in the training schools, and I was satisfied with the paper-cutting and pattern-making which I saw at the Nagpur School. I saw, however, no clay-modelling except in the shape of former specimens of work. So far as I could judge, these two forms of manual training must have been working fairly satisfactorily, and it was certainly a pity, when progress had been made, that they were more or less stopped. All the four ordinary forms of manual training, paper work and clay modelling with the addition of card-board work and sloïd work, seem to me to be very suitable for introduction into Bengal schools, but the work must be done in an exceedingly elementary way, and it must be a cheap system, and one that will not lead to the idea that any form of trade is being taught or fostered. That is, it must be taken up from the purely educational point of view, and probably no tools other than knives, scissors, &c., could be made admissible in such courses in schools. The introduction of trade or artizan implements—at all events at first—might probably lead to much opposition, and might prevent any progress being made in this highly important educational training.

This really concludes the criticism of the modern subjects taught in the vernacular schools of the Central Provinces. It does not appear necessary in any way to review the course of instruction adopted in such subjects as reading, writing, arithmetic, geography, history, &c., for the methods followed in the Central Provinces and Bengal appear to be fairly similar. It may, however, be remarked that while history and Euclid find a place in the upper primary course in Bengal, they are not taught even as optional subjects in primary schools in the Central Provinces. In other respects the subjects taught are more or less similar.

The above remarks also exhaust probably all that it is necessary for me to say on the subject of the education of boys up to the middle standard.

In the case of girls' education in the Central Provinces, I may remark it is exceedingly backward and limited in amount. Very few girls' schools indeed exist, and the great majority of these only teach up to the upper primary

standard. There is little necessity, therefore, for noticing these schools in detail. It may, however, be mentioned that in girls' primary schools needlework is compulsory; drawing, grammar, object-lessons or elementary science and kindergarten occupations and manual training being optional, of which any two may be taken. Sanitation, though not specially mentioned, is really compulsory, as it is taught in the reading lessons in the 3rd and 4th Readers. In the matter of agriculture, the chapters on this subject in the third and fourth Readers are cancelled for the girls' course.

There is also a difference in the method of teaching drill and gymnastics, and the physical exercises used in the girls' schools are more correctly described as action songs and calisthenics, rather than drill and gymnastics. The system which I saw followed in a girls' school in Nagpur was more or less English or European in its character.

CLASSIFICATION OF VERNACULAR SCHOOLS AS REGARDS SOURCES OF INCOME, AND NOTES AS TO INSPECTION OF SCHOOLS.

ALMOST the whole of the schools in the Central Provinces are under public management, receive aid from public funds, and submit to regular inspection from the officers of the Educational Department. It is stated that there are less than 100 "venture" primary schools in the whole of the province and no "venture" middle schools, while the total number of primary schools in 1896-97 was and of middle schools 149. Hence practically the venture schools may be 2,109 neglected in any discussion of the condition of education in the Central Provinces. These vernacular schools appear to be divided into three classes:—

(A) Those maintained by Government or by Boards such as District Councils, Boards, Municipalities, etc., the expenses being wholly met from public funds. This may be called the "fixed grant" system.

(B) Those maintained wholly by payment on the results of the examinations plus school fees. This may be called the "result grant" system.

(C) Those maintained partly by contribution from grants made by Government to public bodies, and partly by "payments by results" of the examination, etc., of the pupils. This may be called the "combined" system.

The schools of classes A and C constitute by far the larger number; those of class B are not so much encouraged. In this respect the schools in the Central Provinces exhibit a marked contrast to the primary schools in Bengal, where all except a small proportion belong to the result grant system, *i.e.*, they are paid solely by results.

The result grant system, in which a considerable number of schools in the Central Provinces are working, also differs decidedly from the system as worked in Bengal. The Central Provinces system gives a school aid calculated *partly* on the number of passes in an examination conducted after prescribed standards and *partly* on the average attendance of pupils. No school is examined for a result grant which has not on the date of examination met on 180 school days from the date of the last examination, or in the case of new schools from the date of registration. These qualifications (and others which are noted below) of the method of sole or simple payment on examination results appear to be very wholesome, and might probably be extended with advantage in Bengal.

The subjects for examination in the vernacular schools, as pointed out previously, are divided into two classes, compulsory and optional. In these examinations no pupil can earn a grant who has not attended the school for at least 90 days. To pass in a subject he must obtain one-third of the maximum marks, but he cannot earn a grant in more than four optional subjects. There are also age restrictions. In the compulsory subjects of any standard no pupil can earn a grant unless he passes in at least two of these subjects. In the optional subjects of the first standard no pupil can earn a grant unless he passes in the three compulsory subjects of the standard. In other standards he must pass in at least two subjects.

In the combined system of schools the fixed grant cannot exceed Rs. 6 per mensem, and the result grants are given at the rate of 50 per cent. of the maximum rate attained in result grant schools.

In order to pass the upper primary examination a candidate must pass in the three compulsory subjects and at least two optional subjects.

I made enquiries into the working and results of the three classes of schools, A, B, and C, as indicated above, and I was assured by the Inspector of Schools that—

Class A.—The fixed grant system (schools fully maintained from public funds) are by far the best; they give the best kind of teaching and education, but on the other hand they are the most expensive of the three classes.

Class B.—The result grant system (schools paid no fixed grant, but only paid on the results of examination, etc.). These are the worst of all the classes of schools in the Central Provinces, giving the poorest education and least satisfactory discipline, but on the other hand they are decidedly the cheapest.

Class C.—The combined system (schools paid partly by fixed grants and partly by results grants). These stand intermediate between A and B, and give a fair education, while they are decidedly cheaper than A, but more expensive than B.

Speaking generally, the housing of schools of classes A and C is better than that of B, though attempts are made to gradually provide schools of class B with suitable school buildings by appealing to private subscriptions, District Boards, etc.

It will be seen that class B practically corresponds in its method of working and general conditions to the ordinary lower primary schools in Bengal.

Another point which is worthy of note in the case of these schools is that while there are only 2,109 primary and 149 middle schools in the Central Provinces, and a correspondingly small number of high schools, yet there are four Inspectors of Schools (in addition to the Inspector-General, who is an energetic inspecting officer), and 30 Deputy Inspectors of schools for supervising the work, giving roughly to each superior inspecting officer 450 primary and secondary schools and to each Deputy 75 only. It will thus be seen that the superior inspecting officers can be, and are, much more in touch with and have far greater personal control over elementary education in the Central Provinces than is possible in Bengal with its enormous number of schools and relatively smaller staff of Inspectors. Further, the Deputy Inspectors in the Central Provinces can give long personal visits to schools, to teach new forms of instruction, or to correct mistakes, etc., while in Bengal the Deputy Inspectors have practically no time and no such opportunity of working in detail with primary schools. It is probably certain that to this relatively very strong inspecting staff a considerable part of the success of the Central Provinces educational scheme has been due, for the numerous inspecting officers have been able to personally and individually work out in the schools the improvements which it had been decided by Government to introduce.

The good results are also due partly, if not largely, to the system of training of teachers in normal schools, which has been practised in the Central Provinces to a larger extent than is the case in Bengal.

Hence it appears necessary to review briefly the existing system of training schools as carried out in the Central Provinces.

Training Schools for teachers.

Training schools.—There are three training schools for teachers in the Central Provinces. One is for teachers in English and native schools in Nagpur, and the others for native school teachers only in Raipur and Jubbulpore. Probably about 100 to 110 teachers are trained and turned out each year, and as there are roughly only about 2,200 schools in the Central Provinces, the supply would appear to be fairly ample.

The training institution at Nagpur, contains two departments, a secondary and a primary. In the secondary department graduates, F.A. certificate-holders, and those that have passed the matriculation examination of any Indian university are trained for a year for employment in colleges and in high schools and in those middle schools which teach English. In the primary department students are prepared for employment in primary and vernacular schools generally by one or two years' course, according to the standard worked for.

In the normal school arrangements are made for instruction in—

I.—The Principles of Education.
II.— ,, History ,, ,,
III.— ,, Practice ,, ,, including organisation of a school, methods of teaching, discipline, &c., and
IV.—Extra subjects (which may be taken up optionally), Physical Science, Drawing, and manual training.
V.—And in the lower parts of the school arrangements are made for continuing the general education of the teachers.

In the highest grade of teachership examination all the first four of the above subjects are taken up and have to be passed. For the secondary grade of certificates, section I is omitted, while even for the certificates of the primary grade of teachers the following subjects have to be passed*:—

* Page 82 of Central Provinces Education Manual.

A.—Easy questions on the Kindergarten system.
B.—Questions on the best method of teaching reading, spelling, grammar, writing, arithmetic, geography, drawing, and object lessons in a primary school.
C.—Questions on the art of oral teaching generally.
D.—Questions on the form of school registers, the mode of keeping them and making returns from them.
G.—To write notes on a lesson on a given subject.
F.—Questions on the organisation of a Primary school, and proof of ability to maintain order and inculcate principles of truthfulness, obedience, and general morality.

Only teachers who have passed the usual teachership examination are now allowed to join schools which receive aid from public funds, and comparing the standard which has to be reached for even primary teachers in the Central Provinces with the standard of qualification, or rather the want of qualifications, of the ordinary gurus in primary schools in Bengal, it will be seen how backward Bengal is in this respect.

It has not been thought necessary to add here any figures as to the cost of the ordinary work of normal or training schools. Such schools already exist at Calcutta, Hooghly, Dacca, Bankipur, &c., and their cost in Bengal is well ascertained.

The above subjects represented the ordinary course of instruction for a primary teacher up till recent years. Since, however, agriculture has been made a more prominent subject of teaching in primary schools, the course of instruction for teachers has also been extended, and they are now called upon to go through a six months' course in agriculture, theoretical and practical, and on the methods of teaching it, in the agricultural school attached to the Agricultural Experimental Farm at Nagpur. This course is partly theoretical, partly practical in the laboratory, and partly practical on the Farm. In addition also each teacher has a plot of ground given him, about two yards wide by five or six yards long, which he has to cultivate entirely himself (to dig, to plant, to weed, to water, etc., etc.), and the produce of this during the six months' course belongs to the student.

Batches of about 60 are taken each half-year, of whom about a quarter consist of students who have just passed through the training school, while the remaining 45 consist of actual teachers of schools who are drafted up from their schools, two or three being selected from each district for each course. At the end of six months there is the usual examination on which certificates are issued. In this way about 110 to 120 teachers of primary schools are trained annually in agricultural methods, and as time goes on practically all the teachers

of the province will become thus trained. In the case of the training school students who have just passed as certificated masters, they receive a scholarship allowance of Rs. 5 a month, while the actual masters drafted from the mufassal schools receive their own full pay, the pay of their substitutes being provided by the various District Councils, Boards, etc., under whom they are serving.

As this represents an important development in the method of training primary teachers, which is not at all represented in Bengal at present, and as it is connected with certain proposals made on the establishment of the Lower Agricultural Class at Sibpur (which has been lately opened, but which has not yet filled), it will be perhaps well to give a few details of the kind of instruction followed, and as to the staff, etc., required in the institution.

The following is the curriculum of study in the class which is intended for the instruction of vernacular school teachers:—

1.	Agriculture	...	As in Fuller's Primer.
2.	Chemistry	...	Selected lessons to illustrate Fuller's Primer.
3.	Kasra	...	Study of methods of land records, etc., and how to fill up certain forms used by village patwaris, and to learn cognate matters.
4.	Drawing	...	Primary course, model and freehand.
5.	Veterinary science	...	Lessons as given in Fuller's Primer.
6.	Botany	...	Lectures as far as required to illustrate Fuller's Primer.

The actual work which these teachers have to get through in their six months' course of study is more clearly shown in the following detailed syllabus of study.

Syllabus of Demonstration work to illustrate the Agricultural Primer.

Preliminary.—Exhibit the magnifying glass, show magnifying powers of a drop of water on leaf-hairs; explain general structure of the microscope and show its effect with previously prepared slides, and also with objects (such as as a flea) prepared for the occasion:—

Lesson I.—(With the microscope.) Vorticella, rotifera (fixed animals), desmids and diatoms (moving vegetables); volvox (the same in early stage).

(On the table.) Sensitive plant; examples of plants which open and close at certain hours.

(With the microscope.) The cellular structure of the root and stem of a plant.

Lesson II.—(On the table.) Structure of the orange, plantain, stem, tap roots and crown roots; root hairs as seen on a plant dug up, and on the rootlets of a plant grown in water; proof of root suction; exhibit endosmosis with a tube closed at one end by a piece of bladder; aerial roots of the maize; bargad and orchid; compare beet with carrot, onion and potato as specimens of root and of stem development.

Lesson III.—(With the microscope.) Fibro-vascular bundles in the plantain; cross sections showing their position in the plantain and the arhar; also the thickness of cell walls.

(On the table.) Sections of trees showing the annual growth under the outside bark, flax fibre and hemp fibre extracted from the plants. Experiments to show transpiration with a growing plant under a shade; then with leaves having their petioles in water and out of water.

(With the microscope.) Stomata of leaves; chlorophyll granules.

Lesson IV.—(On the table.) Cotton flower and seed.

(With the microscope.) Anthers and pollen grains; pollen grains adhering to stigma.

Lesson V.—(On the table.) Compare with cotton flower a flower of the pea-tribe; a til flower, a marigold, the flowering stock of the maize; male and female flowers of the gourd tribe; flowering stalks of the grass tribe; exhibit the Paris model of a pea flower and diagrams.

Lesson VI.—(On the table.) Repeat the experiment to show endosmosis, demonstrate the existence of invisible gases by showing the effect on light and on life of oxygen and carbonic acid gas confined in jars; prepare oxygen gas from chlorate of potash or red oxide of mercury; prepare carbonic acid gas from charcoal and prove its existence by lime water; show its existence in breath expelled from lungs; show the evolution of oxygen gas by leaves exposed to sunlight, in water, and the clearing of a jar of carbonic acid by plant action so as to render it possible to burn a light in it; illustrate the gaseous, liquid and solid conditions of matter by an experiment with sulphur.

Lesson VII.—(On the table.) Compare good and bad wheat seed and cotton seed; prove by pot cultivation that a good seed of wheat or cotton will produce a finer plant than a bad seed, if indeed the latter does not fail to germinate altogether; explain the loss in sowing for wheat a large amount of seed which does not germinate.

(In the field)—Show the effect on plants of not being crowded, but having plenty of room and air.

Lesson VIII.—(On the table.) Compare different kinds of wheat seed, pissi, haura, kathsa, and different kinds of cotton, bani, jari American.

Lesson IX.—(On the table.) Show by cultivation in distilled water that a plant can for some time live on what it obtains from air alone.

Chemical combination, its difference from mechanical combination illustrated by an experiment with zinc and sulphur, heated and unheated ; explode hydrogen and oxygen and produce water; decompose water by electricity; compare a piece of chalk with specimens of calcium, carbon and oxygen gas ; contrast chalk (carbonate of lime) with pure lime (lacking carbonic acid) ; prepare lime water from the latter ; drive off carbonic acid from the former, and show the formation of chalk by the combination of the carbonic acid with the lime water ; repeat the experiment on lime water with carbonic acid formed from charcoal ; illustrate chemical combination by the formation of copper nitrate ; show the rusting of iron by combination of oxygen ; then drive off the oxygen from red oxide of mercury and show its reduction to pure metal and loss of weight owing to loss of oxygen.

Repeat the experiments described in the second clause under lesson VI ; show loss of weight by dessication in case of cabbage or other fleshy leaved plant ; weigh a piece of green bamboo ; then dessicate to show weight of water; then reduce to charcoal to show the weight of substances other than carbon and mineral constituents ; then reduce to ashes to show weight of mineral constituents.

Lesson X.—(On the table.) Exhibit specimens of different kinds of soils and analyze them mechanically to show various degrees of fineness.

(In the field) The box system of keeping cattle and the proper storage of manure under cover.

Lesson XI—(On the table.) Effect of watering with solution of saltpetre in pot cultivation. Pot cultivation with various manurial substances.

(In the field.) The sewage farm, the Ville and manure series of experimental plots.

Lesson XII.—(On the table.) Ball and ring experiment to show expansion by heat, contraction by cold; the thermometer; cracking of soils by alternate heating and cooling illustrated by heating a glass rod and cooling it suddenly. Show by mechanical analysis the varying proportion of fine particles in different samples of soils.

(In the field). The construction and working of the earth-turning plough.

Lesson XIII.—(On the table.) Capillary action in a fine tube; in a sun-dry brick; contrast with a heap of loose earth.

Lesson XIV.—(In the field.) Embanking for wheat; effect of irrigation on wheat and garden crops.

(On the table.) Illustrate the effect of irrigation in pot cultivation.

Lesson XV.—(On the table.) Specimens of *kans* grass and of agia, if procurable.

(In the field.) Effect of allowing a field to become weedy or its plants overcrowded.

(With the microscope.) Rust, ergot, bunt and smut.

Lesson XVI.—(In the field.) Construction and use of the following implements:—

Swedish plough compared with the local Nagpur plough.
Bakhar, Daura, Dundia, Tifan, Argara.
Chain pump, steel lift, moth.
Winnower, thresher, sugarcane mills.

Lesson XVII.—(In the field.) Ensilage; if possible illustrate cattle-disease by examination of patients in the veterinary dispensary.

The following time table also shows the scheme of study of the students :—

NORMAL AGRICULTURAL CLASS.

TIME TABLE.

	7—8	8—9	9—10	3—4	4—5	5—6
Monday ...	Agriculture.			Kasra		(Leave)
Tuesday ...	Botany ...	Agriculture		Drawing	Gymnastics	Garden work.
Wednesday ...	Do. ...	Ditto		Model Farm	Model Farm	Ditto
Thursday ...	Chemistry	Ditto		Drawing	Gymnastics	(Leave)
Friday ...	Ditto ...	Ditto		Kasra	Ditto	Garden work.
Saturday ...	Examination.			Drawing	Veterinary science	Ditto

The staff which is required to teach these vernacular masters in two sections using two languages (Mahrathi and Hindi) and to superintend their practical training has also to take two higher grade Agricultural classes (first and second grade) working for revenue, etc., appointments which will be

referred to later on. The cost of the teaching staff is, however, moderate. It consists of the following gentlemen:—

	Pay. Rs.
Principal.—R. S. Joshi, D. Ag.	50
(Who gets also Rs. 175 as Superintendent of the Experimental Farm.)	
Lecturer.—I. N. Jakati, D. Ag.	80
„ B. V. Joshi (Rs. 40 to Rs. 60 in five years) ...	50
Drawing-master.—(Comes from training school)	Nil.
Veterinary lecturer.—Receives an allowance of	20
(Is also Veterinary Inspector to D. V. C. and gets Rs. 70.)	
Total ...	200

That is for training 120 vernacular teachers per annum, and also the two agricultural classes, the total cost of lecturers, etc., is Rs. 200 a month only.

As stated previously, there is a higher (English) class in agriculture the course for which extends over two years and which is held in the same building with the vernacular master's agricultural class. These students on passing out have a preferential claim on certain revenue, settlement and Court of Wards appointments. As this class is interesting at the present time, as it corresponds to the new agricultural class at Sibpur, I made a few enquiries as to its working. The numbers attending it are not large, as there are only fourteen students in the first-year class and four students in the second-year. The course of study which they have to go through comprises—

Agriculture (theory and practice).
Surveying (theory and practice).
Chemistry (theoretical and practical).
Botany.
Geology.
Elementary Veterinary Practice and Science.
Drawing.

In the case of practical agriculture each student is given a plot of about a quarter of an acre of land, which he is required to cultivate entirely with his own hands, and the produce of which he is allowed to keep. They have also to do actual work in connection with the experimental agricultural farm in studying improved forms of agricultural implements, in studying the effects of manures on various crops, etc., etc.

It may probably be interesting to place on record the detailed course of studies which these agricultural students have to work through, for the purpose of comparison with the course which is being taught at Sibpur.

AGRICULTURAL CLASS, NAGPUR.

Syllabus of Studies.

A.—Agriculture.

Soils.—(*First year.*)—Origin of soils; soils *in situ* and alluvial soils; description of principal soils of the Central Provinces, with names and qualities; classification of soils by mechanical analysis; fertility of soils as dependent on composition, texture, depth and lie of surface; effect of climate in improving soils; improvement of soils by levelling and by embankment; cost of these processes.

(*Second year.*)—Physical properties of soils; their absorbent and evaporative powers; capillary action; chemical composition of soils considered with reference to supply of the more important plant food elements: the use and abuse of soil analysis; soil analysis by cropping (Ville's method): dormant and active condition of plant food elements; effect of climate and of tillage in converting plant food from the dormant to the active condition;

loss of plant food by surface scouring; the exhaustion of soils; its signs and its causes; uses and methods of fallowing; rotation of crops.

TILLAGE.—(*First year.*)—Objects to be attained; influence of climate in assisting and obstructing tillage; use of a fine tilth; the conditions in which different soils are suitable for sowing; different systems of tillage instanced by the systems followed for wheat, for *juari*, for sugar-cane and for rice; implements used for tillage; the *nágar* in its different forms, *bakhar*, the clod crusher, English ploughs and harrows.

(*Second year.*)—The history of the plough; the theory and method of adjusting the English plough; the materials used for various implements and the method of their construction; special operations of tillage for breaking up waste land or eradicating grass; the advantages and dangers of deep ploughing; the effect of embanking land in lessening the need of tillage, the cost of the various operations of tillage.

SOWING.—(*First year.*)—The condition in which land is fit for sowing; methods of sowing practised with different crops; the *nari* plough, *tifans*, the *argara*; the broadcast sowing; the depths to which different seeds should be sown; thick and thin sowing; English drills; the growth of seedlings for transplanation; the advantages of transplanting.

(*Second year.*)—The vitality of seeds and means of ascertaining whether seed has retained its vitality or not; special preparation of seed for sowing; use of sulphuric acid for cotton; pickling seed; improvement of seed by special cultivation and selection; the principles to be followed in selecting seed, the use of changing seed; special treatments in preparing seed beds for the growth of seedlings for transplantation; cost of sowing and transplanting.

MANURE.—(*First year.*)—The need of applying manures; exhaustion of soils by continuous cropping; soils which give and do not give good returns for manuring; descriptions of manure used by the people and the method of their application; cattle dung, the best method of storing it; the condition in which it should be applied; the seasons for its application; green soiling; bones, the manufacture of bonemeal; saltpetre; town sewage.

(*Second year.*)—Manures considered in relation to plant food; the particular plant food supplied by different manures; suiting the manures to the requirements of the soil; the changes occurring in manure pits and the means of regulating them so as to prevent loss of value; the method of making bone superphosphate; the theory of green soiling and of growing crops in a mixture; use of slaked and unslaked lime and gypsum; the various methods of utilizing town sewage in agriculture; the cost of various manures and of applying them.

IRRIGATION—(*First year.*)—The crops for which irrigation is needed; monsoon irrigation of rice; cold weather irrigation of wheat, vegetable, and sugar-cane; different methods of lifting water; the well bucket, the Persian wheel, the lever lift, the swing bucket, pumps; kutcha and pucka wells; the means of irrigating from streams and nalas; the irrigation of rice and sugar-cane from tanks.

(*Second year.*)—The extent to which water enters into the composition of plants; use of water as a carrier of plant food; sources from which plants derive their water-supply; the rainfall; the retention of moisture by different soils; the depths from which plants can draw sub-soil moisture; the circumstances which render irrigation necessary; its use in distributing the supply from rainfall rather than in adding to it; the method of constructing different water-lifts and their cost; the construction of pucka and kutcha wells; the method of lining kutcha wells; the places favourable for well construction; the construction of tanks and the places favourable for their construction; the methods of roughly testing discharges and ascertaining the efficiency of different means of lifting water; surface and underground drainage, natural and artificial.

PROCESSES INTERMEDIATE BETWEEN SOWING AND REAPING.—(*First year.*)—Weeding; the names and characters of the principal weeds; the injury which weeds cause to crops; the importance of not permitting weeds to seed. Weeding by hand and by bullock power; the *daura* and *dundia*; cost of weeding; saving of weeding by good tillage; importance of keeping the ground open round the roots of growing plants in order to check evaporation.

(*Second year.*)—Increasing the yield of crops by checking their growth; lopping cotton; the "beasi" of Chattisgarh; watching crops; methods of scaring animals; cost of watching; cheap methods of fencing; means of trapping noxious animals.

GATHERING AND CLEANING (*First year.*)—The harvesting of *juari*, *til*, wheat and linseed; the means of threshing and cleaning them used by the people contrasted with threshing and winnowing machines; the importance of proper cleaning; the meaning of "refraction" in trade.

(*Second year.*)—The harvesting of rice, cotton, sugar-cane and tobacco; rice cleaning cotton ginning, sugar boiling and tobacco curing; the manufacture of drained sugar.

GENERAL (*First year.*)—The Indian seasons and the crops which grow in them; the effect of heat and cold, moisture, drought and cloudy weather on different crops; crop diseases; rust, ergot and caterpillars.

(*Second year.*)—The principal crops grown in the Central Provinces; the habits of growth of their roots and stems and their effects in cleaning land, enriching or impoverishing it; the amount of each principal plant food contained in a crop of wheat, and the sources from which it obtains these foods; the part played by the atmosphere in the nutrition of plants; carbonic acid, its presence in the air and its fixation by plants; the ammonia received by the soil in rain; Nessler's tests; nature of fungoid disease as shown by the microscope.

CULTIVATION OF SPECIAL CROPS.—Students will be practically taught to grow and prepare for market the following crops:—

(*First year.*)—*Juari, til*, wheat and linseed.

(*Second year.*)—Cotton, rice, sugar-cane, tobacco and garden crops.

FEEDING AND CARE OF STOCK.—(*First year*).—The food to be given to cattle in work and out of work; importance of a mixed diet; advantage of giving salt; injury resulting from sudden change from dry to green food; the comparative advantages of grazing and stall feeding; the growth of fodder crops, *poput, lakhori*, guinea grass.

(*Second year.*)—The chief breeds of cattle found in the Central Provinces; the best methods of housing cattle and preserving their manure; the use of the chaff cutter; ensilage; the comparative merits of cotton seed, *karbi* wheat straw, rice straw and pulses as cattle food; the influence of these foods on the value of cattle dung as manure.

FRUIT GROWING.—(*First year.*)—The methods of sowing and transplanting mangoes, oranges, plantains and guavas.

(*Second year.*)—Grafting and budding.

B.—ELEMENTARY CHEMISTRY.

First year.—Changes occurring in air during the burning of a candle; chemical action; indestructibility of matter; elements and compounds; resolution and formation of compounds by analysis and synthesis; metals and non-metals; water; its decomposition by electricity into oxygen and hydrogen; other methods of preparing oxygen and hydrogen; properties of oxygen and hydrogen; ozone, its formation and properties; determination of the composition of water by volume and weight; three physical states of water; ice; steam; change of state produced by heat; expansion of bodies by heat; thermometers; maximum density of water; latent heat of water; evaporation; weight of water; specific gravity; compressibility of water; Florentine experiment; porosity of matter; purity of water; hard and soft water; filtration and distillation; water of crystallization; solvent property of water; liquid diffusion; dialysis; osmose; air; chemical composition of air; difference between simple mixture and chemical compound; eudiometer; preparation and properties of nitrogen; functions played by the several constituents of air in the economy of nature; action produced by animals and plants on air; weight of air; barometer; air-pump; combustion; carbon, its varieties and properties; structure of flame; blow-pipe; reducing and oxydising flame; preparation of coal gas; Davy's safety lamp; preparation and properties of nitric acid; ammonia and carbon dioxide; chlorine, its preparation and properties; preparation and properties of hydrochloric acid; aqua regia; bleaching powder and its uses; occurrence, modifications and properties of sulphur; silicon, its occurrence and properties; occurrence, preparation, modifications and properties of phosphorous; occurrence and properties of zinc, tin, lead, copper, mercury, silver, gold and platinum.

Practical.—Solution and filtration; preparation of hydrogen, oxygen, ammonia, carbon dioxide and nitric acid; mechanical analysis of soil; detection of lime in soil; and chemical analysis of simple salts containing the following basic and acid radicles:—

Basic radicles—Lead, silver, mercury, bismuth, copper, cadmium, arsenic, antimony, iron, aluminium, chromium, nickel, cobalt, manganese, zinc.
Acid radicles—Sulphuric, carbonic, nitric, hydrochloric.

Second year.—Atom and molecule; atomic weight; laws of combination; nomenclature, symbolic notation and formulæ; nature of acids, bases and salts; preparation and properties of sulphuric acid and hydrogen sulphide; silica, its occurrence and properties; tribasic phosphoric acid, its preparation and properties; preparation and properties of potassium; caustic potash; potassium carbonate; potassium nitrate; composition of gunpowder; composition of soap; sodium; caustic soda; sodium chloride; sodium carbonate; sodium nitrate; sodium sulphate; ammonium; ammonium chloride, carbonate, nitrate and sulphate; calcium; caustic and slaked lime; calcium carbonate, sulphate and chloride; aluminium; alumina; aluminium sulphate; formation of clay; composition of glass, porcelain and earthenware; magnesium; magensia; magnesium sulphate; manganese; black oxide of manganese; iron, manufacture of wrought-iron, cast-iron and steel; ferrous sulphate and sulphide; ferric sulphate; carbohydrates; cane sugar; grape sugar; starch and woody fibre; albuminous substances; fibrine; casein; glutin and gelatin; composition of bone, blood, saliva, gastric juice, bile, milk and urine.

Practical.—Chemical analysis of simple salts, containing the following basic and acid radicles and a few mixtures of the above salts:—

Basic radicles—Barium, strontium, calcium, magnesium, potassium, sodium, ammonium.
Acid radicles—Sulphuric, carbonic, silicic, phosphoric, hydrochloric, nitric.

Manufacture of superphosphate; detection of organic acids in soils; detection and distinguishing of starch and sugar; detection of phosphates, potassium compounds and calcium compounds in soil and ashes of plants.

C.—Elementary Geology.

First year.—Object of geology; crust of the earth; materials of which the crust is made; definition of rock and mineral; three great classes of rocks—(1) sedimentary (including organically formed), (2) igneous and (3) metamorphic; description of typical specimens of the different classes of rocks; sandstone, chalk; granite, gneiss; origin and mode of formation of the different classes of rocks; change producing agencies; atmospheric agencies; action of carbon dioxide, oxygen, moisture, frost and winds; formation of soil *in situ*; aqueous agencies; action of streams, rivers, springs, seas and ice action; organic agencies, coral zoöphytes shell-fish, foraminifera; peat mosses, &c; formation of coal; igneous agencies; interior of the earth; hot springs, volcanoes, earthquakes and slow movements of the crust; fossils and fosilization; uses of fossils in geology; general characters of minerals of common occurrence, quartz, chalcedony, jasper, agate, flint, felspar, hornblende, zeolite, mica, calcite, gypsum, apatite, fluorspar, rock-salt.

Second year.—Structure of rocks, stratified, oolitic, crystalline, glassy, porphyritic vesicular, amygdaloidal, schistose; arrangement of rocks, stratification, ripple marks and rain-prints, conformable and unconformable strata, dip, strike, out-crop, anticline and syncline, faults, metamorphism, bosses, intrusive and interstratified sheets, veins and dykes; mineral veins; characteristics of different kinds of rocks, sandstone, grit, conglomerate, shale, limestone, dolomite, gypsum, rock-salt, iron stone, shell marl, coral rock, chalk, peat, lignite, coal, graphite, anthracite, bombs, volcanic ash, lava, obsidian, pumice, trachyte, granite, basalt, laterite, slate, mica-schist, gneiss, marble; succession of strata; relative age of rocks; tests for determining the relative age of rocks; geological divisions, azoic, palæozoic, mesozoic, neozoic; nebular hypothesis; azoic rocks and their occurrence in India, composition, distribution, economic products and characteristic fossils of the formations of stratified rocks; silurian, devonian, carboniferous, permian, triassic, oolitic, cretaceous, tertiary and recent; principal formations of Peninsular India, Gondwana, jurassic, cretaceous, Deccan trap, tertiary, post tertiary.

Practical.—Identification of the rocks and minerals of common occurrence, and a general knowledge of the geology of Nagpur based on Hislop's account of it.

D.—Elementary Botany.

First year.—General characters of flowering plants; structure of a typical plant; organs of nutrition and reproduction; characters of roots, stems, leaves; root fibres and root hairs; true and adventitious roots; ærial roots; forms of roots; parasites and epiphytes; buds; forms of stems; tendril; spine; prickle; parts of leaf; duration, arrangement, outlines, margin and surface of leaves; venation; simple and compound leaves; vernation; inflorescence; bracts; involucre; receptacle; floral whorls; insertion, adhesion, and cohesion of parts of floral whorls; suppression and multiplication of parts; æstivation; placentation; description of specimens of plants; functions of root, stem, leaves, flower; fertilization; crossing; classification; species, genera, orders and classes; primary division of plants, flowering and flowerless; distinguishing characters of dicotyledons and mono-cotyledons; structure of plants of the following natural orders, Leguminosæ, Malvaceæ, Cucurbitaceæ.

Second year.—The fruit and its parts; dehiscence of fruits; classification of fruits; structure of different kinds of fruits, legume, drupe, capsule, berry, achene, nut; the formation and development of the following fruits:—Orange, guava, mulberry, fig, cotton pod, cucumber, pea, mango, cocoanut; the seed and its parts; germination of seeds; conditions essential for germination; surface coverings and appendages; cells, their forms, structure, composition and contents; growth by division of cells; tissues of plants, parenchyma, epidermis, wood, bast and vascular tissues; latex vessels; fibrovascular bundles; internal structure of root, stem, leaves; arrangement of tissues of stem in dicotyledons and monocotyledons; food of plants; conditions of plant growth; selection and absorption of food and storing of nutriment; ascent of the crude sap; respiration, transpiration, assimilation; descent of sap; influence of light and heat on plants; origin of species; structure of plants of the following natural orders:—Compositæ, Cruciferæ, Myrtaceæ, Urticaceæ, Graminæ.

E.—Land Surveying.

First year.—Plotting to scale; map drawing and colouring and the use of conventional signs; chain surveying by triangles and by sight rule; survey by intersection; calculation of areas by mensuration and by acre comb.

Second year.—Use of the theodolite and chain in traversing; traversing with the sight rule and protractor; Gale's method of plotting a traverse; proving a traverse and calculation of areas by universal theorem; use of the planimeter, proportional compasses and pantagraph.

F.—Drawing.

First year.—Free hand.

Second year.—Model.

G.—Veterinary Science.

First-year (junior class) students.

Anatomy.—The main anatomical parts, and the practical names given to them by veterinarians; the age of bullocks; the names of important joints; contents of the thorax, abdomen and pelvis, with their names and positions; the different parts of the feet of a bullock; practical dissection.

Physiology.—The function of important organs in the chest and abdomen, and of the urinary organs. Respiration, circulation and the process of digestion.

Practical demonstration—Handling and casting animals.—Methods of throwing bullocks, the names and uses of the veterinary appliances at the hospital, and the uses of simple surgical instruments, including the clinical thermometer and catheters. Castrating instruments. The feeding, management, and general keep of cattle.

The dressing of wounds and ulcers, and treatment of ordinary cases attending the hospital.

Materia Medica and Pharmacy.—The methods of making up and administering drenches, balls. Making infusions, decoctions, powders, ointments and liniments. The names, uses and doses of the principal medicines, both English and country, with their actions, such as narcotics, diuretics, astringents, purgatives, diaphoretics, disinfectants, stimulants, sedatives and tonics. Botanical names of plants forming some of the above with ocular demonstration if possible.

Second-year (senior class) students.

(1) The four deadly forms of cattle disease, with their chief symptoms and medicinal treatment. Sanitary measures for the suppression and prevention of these diseases.
(2) Minor diseases of cattle, with chief symptoms and their treatment.
(3) Treatment of ordinary forms of wounds, broken horn and ulcers.
(4) *Post-mortem* examination
(5) The popular method of castration, with practical illustrations, and the principles of cattle-breeding.
(6) Lameness, sprains, shoulder slip, etc., with the names of the diseases of main joints and their treatment.
(7) Surgical operations, viz., opening abscesses, removing tumours, tapping the abdomen for hoven, etc., blood-letting.

The course of study and practice appear to be very practical and suitable, and likely to turn out men who will not be above their work, but who will take a practical interest in all matters connected with agriculture.

Probably, however, it is not necessary to go into greater detail in connection with this point.

Teachers' Manuals.

The last point it appears necessary for me to refer to in connection with my visit to the Central Provinces is on the subject of teachers' manuals.

It has been found desirable there to prepare books for the use of teachers of various grades of schools, treating on the various phases of school life, and the best methods of obtaining good results.

A manual was prepared many years ago by Mr. Carnduff, who was an Inspector of Schools in the Central Provinces. This work, or at all events the English edition, is now out of print. A work called *Siksa Patra*, which is still used by teachers in many schools in the Central Provinces, is said to be a Hindi translation of Mr. Carnduff's work. It appears to be a work which has done, and is doing good. It contains chapters on the qualities required in masters and pupils, and on the procedure as to registers, time-tables, management of schools and classes, etc., etc. Then follow instructions as to the best methods of teaching classes various subjects in various standards, and afterwards general subjects dealing with the management of school work, the connection of teachers with school committees, the nature of school buildings and school apparatus, etc. There was, and is, undoubtedly, ample scope for such a work, and specially there is scope for such a work in Bengal.

As Mr. Carnduff's work is out of print, and as the introduction of modern subjects and methods of teaching had rendered the work out of date, Mr. Spence, the Head Master of the Nagpur Training or Normal School, has written a Teachers' Manual, which is, I believe, really to be printed. Translations of it are now being prepared in Hindi, Mahrathi, etc., and I am informed when the translations are ready, the work will be simultaneously published in English and the vernaculars.

The Committee which is now sitting for the purpose of revising or remodelling the system of vernacular education in Bengal had at one of its first meetings come to the conclusion that a Teachers' Manual is urgently wanted for the use of school-masters in Bengal, and the fact that the want has also been fonnd, and is being supplied in the Central Provinces will probably show that the conclusion of the Committee was sound.

Concluding remarks.

In concluding my remarks on the subject of the vernacular education in the Central Provinces, and comparing it with that in Bengal, I am constrained to remark that in such matters as drill, drawing, agricultural teaching, physical science teaching, kindergarten teaching, and object-lesson teaching, the vernacular schools in the Central Provinces are very decidedly in advance of anything we can show in Bengal. In the matter of manual work also a good beginning was apparently made in the Central Provinces, and so far as it went the attempt was successful, and proved that manual training can be introduced in Indian schools.

All these modern methods and subjects of education therefore have been shown to be practical in one province, and it remains to be seen whether equally successful, or possibly more successful, results could not be obtained in other provinces, such as Bengal. Experience has there shown that such subjects are well suited to Indian children, and that they take much interest in them, and further that the introduction of modern methods of teaching does not enhance the cost of education, while European experience has proved that education conducted on these lines is far more satisfactory and gives far better results than when confined to the old methods and subjects of teaching.

ALEX. PEDLER.

FIRST FORECAST OF THE JUTE CROP IN BENGAL FOR SEASON 1899.

THE following is published for general information.

F. A. SLACK,

The 5th July, 1899. *Offg. Secy. to the Govt. of Bengal.*

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

First forecast of the Jute crop in Bengal for season 1899.

Explanatory.—The present forecast furnishes estimates of the area and outturn of the jute crop up to the middle of June, and is compiled from the returns received from the 26 important jute-growing districts of these Provinces. The cultivation of jute outside these districts is insignificant and has been left out of consideration.

2. *Character of the season.*—The rainfall in January was generally in excess of the normal in all the jute-growing districts except Orissa. In February, it was above the normal in East Bengal, Jessore, and Midnapore, and below the normal in all the other districts. In March, again, it was below the normal everywhere except in Jalpaiguri and Rangpur. In April, the rainfall was well distributed, and was generally above the normal. Very heavy rain was received in this month in Khulna and Noakhali. In May, with the exception of Burdwan, and a few districts in North Bengal and Bihar, the rainfall was everywhere above the normal, and was excessive in East Bengal and in the districts of Hughli, the 24-Parganas and Nadia. This excess does not appear to have affected the crop much in East Bengal (Noakhali excepted) but is reported to have prevented the full area from being sown in Hughli and the 24-Parganas, and to have injured the seedlings in Hughli and Nadia. In the first fortnight of June, the weather was, on the whole, seasonable, and weeding operations were carried out successfully in most places ; but the rain that has fallen up to date this month may have interfered somewhat with late sowings.

3. *Area cultivated.*—In the first forecast of the jute crop for the season 1898, it was explained that the figures of normal area as given in that report were obtained from a consideration of the actual areas sown during the past five years. Those figures have been accepted in the present returns as more or less correct in the case of most districts, but they have been revised by the District Officers of Burdwan, Nadia, Rangpur, Dacca, Faridpur and Backergunge, and with these revised estimates, the normal area under jute now amounts to 2,189,400 acres against 2,224,300 acres shown in the forecast of last year. The total area in Bengal sown with jute during the current year appears from the returns appended to this note to amount to 1,914,300 acres against 1,624,400 acres sown in 1898. The great decrease in 1898 was due to a fall in the price of jute and a simultaneous rise in the price of rice. Since then the price of jute has risen, while that of rice has fallen, and the increase in the area sown with jute this year, amounting to 289,900 acres or 17·8 per cent, is undoubtedly due to these fluctuations in prices. It will be noted, however, that the area is still smaller than that which was sown in 1895, 1896

and 1897, the cultivators not having yet forgotten the fall in the price of jute which took place in 1897.

4. *Character of the crop.*—In spite of the excessive rainfall in May in many important districts, the prospects of the crop as reported up to the middle of June are good, and the latest reports received in this Department from the chief jute-growing districts confirm this favourable report.

In the eleven important jute-growing districts marginally* noted, which each have an area over 50,000 acres and contain about 87 per cent. of the total jute-growing area of Bengal, the average outturn estimated for the year amounts to 93·2 per cent. In 10 districts, the present estimates of the crop are returned as 100 per cent. or over 100 per cent.; in 12 districts, they are now estimated at 75 per cent. to below 100 per cent.; and in 4 districts only, viz., Hughli, Nadia, Darjeeling, and Noakhali, are the returns below 75 per cent. Although rain has been somewhat excessive lately, it does not appear to have injured the crop; but the final outturn is greatly dependent on the weather experienced in July and August and on the height of the rivers in those months.

* Mymensingh, Rangpur, Tippera, Dacca, Pabna, Faridpur, Rajshahi, Dinajpur, Bogra, Purnea, Jalpaiguri.

It would appear probable, therefore, that if the present conditions continue, a crop slightly below the average will be reaped in the area sown this year. It must be remembered, however, that this area is still a good deal below the average, and that the total outturn for the whole Province will be accordingly, in all probability, considerably below the normal.

5. *Stocks of previous crops in hand.*—It is reported by almost all District Officers that very little jute is now left in hand from the stocks of 1897 and 1898.

6. *Gross outturn.*—Taking into consideration the estimates of area and outturn detailed in the returns, and accepting 3 bales per acre as the outturn of a normal or 100 per cent crop, the gross outturn of jute may be roughly estimated for the present crop at 58 lakhs of bales. The normal outturn for the Province may be taken as about 66 lakhs of bales, so that the present estimated outturn approximates to 87 per cent. of the normal outturn. Taking 16 annas to represent this normal outturn, the outturn of the present crop, is thus estimated to amount to 14 annas of the normal. As noted in the forecasts for the year 1898, the above is at best only a rough estimate. The District returns are published in full, and those who are interested in the jute trade are in a position to make such deductions from them as their experience may suggest.

N. N. BANERJEI,
Asst. Director of the Department of Land Records and Agriculture, Bengal.

Countersigned.

P. C. LYON,
Director of the Dept. of Land Records and Agriculture, Bengal.

CALCUTTA;
The 27th June 1899.

First Forecast of the Jute Crop of Bengal, 1899.

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1898).	Estimated area sown this year (1899).	Taking 100 to represent the normal outturn per acre, how much represented outturn last year (1898)?	Taking 100 to represent the normal outturn per acre, how much will represent this year's outturn (1899)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.				
Burdwan ...	Burdwan	11,000	11,000	11,000	100	86	Rainfall was deficient at the time of sowing in the Sadar and Katwa subdivisions and heavy in the Kalna subdivision. In the Raniganj subdivision, it was seasonable.	
	Midnapore	12,100	11,800	12,300	79	86	The increase in area and outturn is due to seasonable rainfall.	
	Hooghly	12,000	13,900	13,100	100	61	The decrease in area this year as compared with that of last year is due to excessive rain during the latter part of May. The decrease in the outturn in column 7 is due to the fact that a large area was submerged after sowing. Prospects may be better later on.	
Presidency ...	24-Parganas	37,700	30,000	33,600	100	95	Decrease in the outturn this year is anticipated, owing to the heavy rain in May, which interfered with the successful sowing of the crop. The increase in area is due to the low price of rice and the higher price of jute.	

Division.	District.	Approximate normal area under Jute.	Approximate area sown last year, (1898).	Estimated area sown this year (1899).	Taking 100 to represent the normal outturn per acre, how much represented last year (1898)?	Taking 100 to represent the normal outturn per acre, how much will represent this year's outturn (1899)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.				
Presidency—*concld.*	Nadia	47,600	26,600	40,000	81	70	The increase in the area sown this year is due to seasonable rainfall at the time of sowing and to the high prices of jute now prevailing; but the recent excessive rain has done much damage to the crop; hence the decrease in the outturn.	The outturn has possibly been underestimated. The estimate of normal area seems high.
	Murshidabad	21,700	16,000	19,680	83	88	The increase in the area sown this year is due to the low prices of food-grains, and the increase in the estimated outturn is due to favourable rainfall at the time of sowing.	
	Jessore	33,200	18,100	27,200	71	95	The prospects this year are better on account of seasonable rain.	
	Khulna	20,800	14,300	18,100	70	93	Owing to timely rainfall and to the low price of paddy, the cultivation of jute this year is a little in excess of that of 1898.	
	Rajshahi	108,100	100,200	108,700	78	103	... ...	
	Dinajpur	99,500	75,000	75,000	100	100	The area sown with jute this year is about the same as that of last year. Up to date the rainfall seems favourable to the cultivation of jute, which is likely to yield an average crop.	

Rajshahi ...	Jalpaiguri	66,700	63,800	64,800	68	78	Seasonable rainfall has helped the growth of the crop. The outturn of this year may be expected to be better than that of last year.
	Darjeeling (plains) ...	2,500	1,000	1,000	50	80	Owing to unseasonable rainfall this year, no better outturn is expected than that of last year.
	Rangpur	277,600	182,000	213,930	82	91	Owing to the high price of jute last year, the cultivators have sown more lands with this crop this year than in the last year. The rainfall has been favourable on the whole till now, and so a better outturn is expected.
	Bogra	95,900	40,000	75,000	73	100	Better prices obtained for jute during last year as compared with the preceding year, and the low price of rice induced cultivators to grow jute to a larger extent during the current year than in the last. The stock of food-grains being full, the cultivators appear to have turned to jute as a means of making money. Want of rain in the beginning has interfered with the sowings, but sufficient rain has since fallen, and a full average crop may be expected if the weather continues favourable.
	Pabna	144,800	103,800	123,000	80	100	The more extensive cultivation of jute is due to the low price of paddy. The favourable weather holds out hope of a good outturn.
Dacca ...	Dacca	171,000	132,400	152,000	85	100	... ... The Collector has revised the normal area in column 3.
	Mymensingh	250,500	197,500	208,000	90	92	Owing to the fall in the price of rice, the area sown with jute has increased during this year.
	Faridpur	126,000	70,000	90,000	60	100	The normal area has been revised, as the figure reported last year by the Subdivisional Officer of Goalundo appeared on the face of it absurd. The increase in area this year as compared with that of last year is due to timely rainfall during the sowing season. The outturn will probably be better than that of last year, owing to better rainfall during the year under report.
	Backergunge	10,000	7,500	10,000	100	100	The area under jute this year is about normal. The relative prices of rice and jute have caused an increase in the area this year over that of last year. The area in column 3 has been revised by the Collector after enquiry.

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1898).	Estimated area sown this year (1899).	Taking 100 to represent the normal outturn per acre, how much represented outturn last year (1898)?	Taking 100 to represent the normal outturn per acre, how much will represent this year's outturn (1899)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.				
Chittagong ...	Tippera	231,100	118,800	234,600	85	82	The increase in the area sown this year is partly due to timely and abundant rainfall and partly to paddy lands being sown with juta, owing to the fall in the market price of rice.	
	Noakhali	4,600	3,500	2,000	82	60	The smaller estimated outturn is due to excessive rainfall since the sowing of jute.	
Bhagalpur ...	Bhagalpur	21,900	22,400	22,400	105	100	The sowing has just commenced, and if the weather continues favourable, the whole area sown last year will probably be sown this year.	
	Purnea	71,300	35,000	33,000	94	95	The rainfall in the Sadar and Araria subdivisions has done good to the crop, but the short rainfall in May in the Kissenganj subdivision has retarded the growth of the plants in that locality.	
	Malda	22,500	20,000	18,000	88	94	Owing to timely rainfall, a better outturn than that of last year is expected.	
Orissa ...	Cuttack	4,800	5,600	5,500	110	108	In certain localities sowing has not yet begun. Owing to seasonable rainfall, the outturn has been estimated above the normal.	
	Balasore	2,000	2,800	2,000	97	100	The season seems to be favourable for the growth of the crop. The decrease in the area sown this year as compared with that of last year is due to the fact that there has been no cultivation of jute in Chakla Singla this year, whereas 200 acres were under cultivation last year.	
	Total ..	2,189,400	1,024,400	1,914,300	85	95*		* Estimated by this Department.

CALCUTTA MUNICIPAL BILL.

MUNICIPAL DEPARTMENT.

THE following correspondence is published for general information.

E. W. COLLIN,

Offg. Secy. to the Govt. of Bengal.

The 11th July 1899.

No. 180T., dated Calcutta, the 4th May 1899.

From—The Asst. Secy. to the Government of Bengal, Legislative Department,
To—The Secretary to the Government of India, Legislative Department.

I AM directed to submit, in pursuance of Rules 3 and 7 (4) of the revised instructions regarding legislation in Local Councils, a copy* of the Calcutta Municipal Bill as amended by the Select Committee, together with a copy* of the Report of the Committee, and to request that the sanction of the Government of India may be accorded to the penal clauses of the Bill, namely, sections 602 to 609. These sections have been modified by the Select Committee, and His Honour the Lieutenant-Governor proposes to accept them as they stand in the amended Bill.

* With 25 spare copies.

No. 93, dated Simla, the 17th June 1899.

From—A. H. L. FRASER, ESQ., C.S.I., Offg. Secy. to the Govt. of India, Home Dept.,
To—The Secretary to the Government of Bengal, Legislative Department.

I AM directed to acknowledge the receipt of your letter No. 180T., dated the 4th ultimo, submitting a copy of the Calcutta Municipal Bill as amended by the Select Committee with a copy of the Committee's report. These papers have been carefully considered by His Excellency in Council, and I am to communicate the following remarks and proposals.

2. The late Lieutenant-Governor of Bengal, Sir Alexander Mackenzie, set forth the grounds for the introduction of this Bill in Mr. Risley's letter No. 383T.M., dated the 17th June 1897. He drew attention to certain matters in respect of which the existing system of municipal government in Calcutta had failed, and to certain flagrant abuses which had grown up under it. The principal grounds for the introduction of the present Bill, as summarized by him, were as follows:—

(1) the complete failure of the elective system to secure adequate representation even of the different interests existing in the native city;

(2) the practical exclusion of European men of business from all share in the municipal government of Calcutta;

(3) the growth of party spirit and the appearance among the elected Commissioners of a class of professional and in some cases corrupt politicians;

(4) the abuse of the Committee system, which paralyzed the executive officers and demoralized the subordinate staff; and

(5) the consequent breakdown of the conservancy and water-supply of the town and of every department of municipal administration.

3. The Government of India fully accepted the necessity for the remedy of these abuses; and they assented generally to the principle of the proposed legislation, while in respect of details they relied at that early stage upon the high authority of Sir Alexander Mackenzie. In submitting the Bill to the Secretary of State (Despatch No. 1, dated the 6th January 1898), the Government of India said: "We desire to give our fullest support to the Lieutenant-Governor in his endeavour to improve the system of municipal government and to remove the sanitary defects of Calcutta, and we approve of the introduction

in the Legislative Council of Bengal of a Bill based on the general lines of the Bill under consideration. But we have refrained for the present from any general discussion of the details of the Bill; and we think that the responsibility for them should rest with Sir Alexander Mackenzie." It may be noted also that in this Despatch the Government of India, even at that early stage, indicated a preference, as regards the constitution of the General Committee, for the model of the Bombay City Municipal Act. It was only in deference to Sir Alexander Mackenzie's strongly-expressed objections that they did not at that time persist in their views in this respect.

4. The Secretary of State (in His Lordship's Despatch No. 25, dated the 10th February 1898), after summarizing the views of the Bengal Government and of the Government of India, communicated in very cautious language his acceptance, not of the Bill itself, but of the principle that the executive should be strengthened, and that the bodies representing the trade of Calcutta should have a voice on the General Committee. He added that he would watch with interest the discussion of the proposed Bill in the Council of the Lieutenant-Governor.

5. In these circumstances the Bill was introduced into the Local Council on the 19th March 1898; and it was referred to a Select Committee on the 4th April 1898. Meanwhile Sir Alexander Mackenzie resigned the office of Lieutenant-Governor; and Sir John Woodburn succeeded him on the 7th April 1898. In opening the winter session of the Local Council on the 12th November 1898, His Honour made a statement upon the course of business. He dwelt especially on this Bill, the consideration of which by the Select Committee was to be the main work of the session. He accepted fully the decisions of the Council, which had endorsed the proposals of his predecessor. He specially quoted with approval the opinion of Sir Henry Harrison, a distinguished Chairman of the Corporation, that "under its present constitution there is a lack of motive power. The energies of the municipal government expend themselves in criticism and not in action;" and His Honour added, "in the administration of a great city there must be provision for prompt, steady and efficacious action; and there is no room for doubt that reform of some sort is needed."

6. The Select Committee began their sittings on the same date, the 12th November 1898, and have met forty times, discussing the Bill section by section, and devoting to it what appears to have been a very patient and thorough examination. They have carefully considered the Bill itself, the voluminous criticisms referred to in the first paragraph of their report, and the views of the Calcutta Building Commission. They have recognized the limitations imposed by the reference from the Local Council under which they were acting; but they have proposed a large number of alterations, some of which are of considerable importance. And now the amended Bill with their report is submitted for the renewed consideration of the Government of India.

7. The Government of India cannot fail to realize that they have a special responsibility in this case. It would be strange indeed if they did not feel a peculiar interest in a measure affecting the municipal constitution of a city, which is not merely the capital of the Province of Bengal, but also the seat of the Imperial Government and the capital of the Indian Empire. They are deeply persuaded of the importance of a local administration, which shall adequately represent the various great interests that have placed, and still keep, Calcutta in its premier position in India, and which shall be businesslike, efficient, and free from scandal or reproach. At the same time it would be their natural desire, in the interests both of continuity of administration and of public harmony, to see these objects attained, not by any contravention of the broad principles of Local Self-Government already conceded, but by a curtailment of the abuses to which in practice they may have become exposed, and by a restriction, within limits suggested by experience, of the range of their future operation. In these opinions the Government of India are convinced that they have the sympathy of the Lieutenant-Governor.

8. In the course of the passage of the Bill through its various stages, much criticism has been bestowed upon it from many quarters; and, while a good deal of this criticism has been of only ephemeral value and has rested upon no solid foundation, the Government of India have been led, after a careful

and independent investigation, to think that there are features in Sir Alexander Mackenzie's Bill, which are not in entire accordance with the principles just laid down, and which might not in practice ensure that amicable and patriotic co-operation of all parties in the future municipal government of the city, which is essential to its efficient administration.

9. The first of these points is the want of correspondence, in constituent proportions, between the Corporation, which is still left under the Bill with its original numbers (75) and constituent elements (50 elected by wards, 10 elected by bodies representing trade, and 15 appointed by the Government) and the new General Committee of 12 members, to be constituted in the opposite proportions of 8 from the 25 members representing trade or appointed by the Government and 4 from the 50 ward members. This proposal, however fairly it may be held to give representation on the General Committee to the leading interest in the city, and however well it may have been expected by Sir Alexander Mackenzie to work in practice, is undoubtedly illogical, inasmuch as it introduces a wholly different basis of representation in the small executive body from that upon which the larger administrative body is constituted. Moreover, it has been anticipated that this lack of proportion, and the divergent interests which it may be expected to some extent to create, will be liable to produce friction between the two bodies, upon whose harmonious co-operation the future government of Calcutta must so largely depend. To the success of any scheme of municipal reform the absence of such a spirit of concord would unquestionably be detrimental, if indeed it did not in the long run prove to be disastrous.

10. Such were the opinions which the Government of India had been led to form by attitude of public opinion towards the Bill, and by a careful study of the Bill itself at the time when the Select Committee began their labours. It has now emerged from the Select Committee; and the Government of India are called upon to consider the Bill in its amended shape.

11. In some respects the Bill is now a stronger and a better Bill than when it was introduced into the Local Council. Passing over minor details, in respect of which there has been improvement, there have been inserted, for example, sections 26-D, 26-E and 26-F in place of sections 22 and 63 (*b*) of the Bill as introduced. These modifications follow the English law; and the powers of inspection and of prompt and effective intervention thus bestowed will enable the Local Government to exercise much more efficient control. And though an appeal will still lie to the Government of India, the provision for the suspension of action pending appeal has been very properly abandoned. Another instance of the improvement of the Bill in important respects is the action taken in the Select Committee to reduce the burden of work and responsibility laid upon the General Committee by the Bill as originally introduced.

12. On the other hand, the fears entertained by the Government of India as regards the institution of co-ordinate authorities and as to the possibility of friction resulting therefrom have been confirmed by changes which have been made in the Bill in the Select Committee, and by the opinions recorded by the Honourable Messrs. Narendra Nath Sen and Surendra Nath Banerjee in their Minute of Dissent. The powers of the Corporation over its officers and over the work of the General Committee have been very considerably increased by the provisions of sections 28-J, 57 and 66 regarding the appointment and leave of the officers, and by the provisions of sections 79, 95 and 126 regarding contracts, control and finance, as well as by several other provisions of perhaps minor importance. At the same time an unequivocal declaration has been made by the two members of the Local Council, who represent the opinions of the majority of the Corporation as constituted by the present Bill, that "an emasculated Corporation, but lately in possession of supreme power, must view with uneasiness, if not with positive jealousy, the creation of authorities, hitherto subordinate to it, but now rendered independent of it, in respect of the bulk of their powers and functions." The Government of India are not without alarm that the want of homogeneity already complained of may, if uncorrected, prejudicially affect the future success of the measure.

13. In these circumstances, the Government of India have carefully considered whether the Bill should receive their sanction in its present form, or whether it is susceptible (without any such radical reconstruction as would

produce general irritation and throw away the labours of the past year) of modifications either of principle or form which would meet the objections previously stated, and lessen, if not altogether remove, the possibilities of future friction. The Government of India have been struck, in their examination of the grounds advanced both by Sir Alexander Mackenzie and Sir John Woodburn for the measure, by the allegation that the existing Corporation has devoted itself to speech and to criticism rather than to action. This charge, while doubtless to some extent due to the temper and spirit in which it has approached its work, is in the main to be attributed to the considerable and, as it would seem excessive, numbers of the municipal body. Their numerical strength, when viewed in regard either to the number of electors by whom the majority are returned, or to the experience of municipal institutions elsewhere, seems to be disproportionately and unnecessarily large. There can be no reason why a number of voters returned as only 13,890 out of a total ward population estimated at about 650,000, or a proportion of little more than 2 per cent., should return as many as 50 members; or why the interests of a city even of over 681,000 inhabitants should require the services of 75 Commissioners for their proper protection. The Government of India are disposed, therefore, to think that a most effective, though hitherto unsuggested, check upon the abuses and anomalies complained of might be found in a reduction of the numerical strength of the Corporation.

14. Such a reduction might further enable the Government of Bengal to secure that more just and adequate representation of the various interests that compose the corporate life and wealth of Calcutta, which has been the avowed object of the promoters and supporters of the existing Bill, without presenting the illogicality of form, or producing the possible friction, associated with the measure now under discussion. It should be found, if possible, in a plan which would recognize, and constitute in some sort, an equality of balance between the two main interests and classes in the population of the city, viz., the European interest, largely preponderating in wealth and influence, and the Native interest, largely preponderating in numbers.

15. It will be remembered that already, at a very early stage in the history of this Bill, the Government of India had indicated a partiality for the Bombay model, as regards the constitution of the General Committee, and the numerical ratio existing between its constituent elements and those of the main body of the Corporation. Their attention has been recalled to this suggestion by a remarkable paragraph in the able Note of Dissent recorded by the two native members of the Select Committee who have most distinguished themselves by their frank and intelligent criticisms of the present Bill. It will be found that they there (paragraph 24 of their Note) throw out the following noteworthy suggestion :—

> The constitutional part of the Bill, as we have already remarked, is largely modelled on the Bombay Act of 1888. But the fact is lost sight of, that while the Bombay Act is the natural outgrowth of the systems of municipal administration, previously in force in Bombay, the principles of that Act are entirely foreign to the spirit which has characterized the municipal legislation of Calcutta since 1863. Besides, the present Bill only partially borrows from the Bombay Act, incorporating some of its objectionable provisions, while all those which tend to popularize that system have been altogether left out. In the course of this Note we have pointed out how in certain important respects the provisions of the Bill differ from those of the Bombay Act, and we now propose to draw attention to some of the most prominent features of the Bombay Act which find no place in the present Bill. In Bombay the Corporation is the superior administrative body. It chooses its own President, who is the chief spokesman of the Municipality. The Standing Committee, corresponding to the General Committee under the Bill, is really a Committee of the Corporation, and not so merely in name, fully two-thirds of its members being elected by the Corporation. There is thus a solidarity of feeling among the majority of the members of the Standing Committee, who owe their position, and are responsible to one central authority, whose policy they are obliged to carry out with the utmost loyalty. The Standing Committee too elects its own Chairman, and the Municipal Commissioner, the Chief Executive Officer, is not even a member of either the Corporation or the Standing Committee. The Municipal Commissioner performs all executive work and carries out all orders of the superior administrative body. It is true he is appointed by Government, but the appointment is for a renewable period of three years, and his salary cannot be increased beyond Rs 2,500 a month except with the approval of the Corporation. Can any one say that this is the constitution that is proposed for Calcutta under the Bill? We are no advocates of the Bombay system; but if is at all to be given a trial in Calcutta, we are certainly of opinion that it will not do to borrow from it here and there, but that the system should be introduced into Calcutta in its entirety.

16. The Government of India are inclined to think that in this suggestion and in a more close adaptation of the Bombay model, might be found the solution for which they are seeking. I am desired, therefore, to submit, for the consideration of His Honour the Lieutenant-Governor, the following amended plan for the constitution of the reformed Corporation of Calcutta and of its Committees.

17. The Bombay Corporation is composed of two factors equal in numbers, and consisting respectively of members elected by the wards and of members appointed by the Government or elected by representative bodies. These two sections consist of 36 members each, or a total of 72. For the reasons already named, the Government of India are inclined to think that this total, which falls little short of the 75 hitherto allotted to Calcutta, is not required in the latter city in the interests either of adequate representation or of efficiency. They are the more disposed to take this view in the case of Calcutta, because any attempt to raise the strength of what may be described as the European element to the existing level of the Native element would not merely greatly augment total numbers, which are already in their opinion excessive, but would give to European interests a share in the numerical strength of the Corporation to which it is believed that they have no desire to lay claim; whilst if the Native proportion in the Corporation were diminished by 14, and the European proportion were increased by 11, so as to follow exactly the Bombay model, it is conceived that while the objection already stated would apply to the increase of the European section, serious exception would also be taken to a reduction of the Native element, which would either involve a radical reconstruction of the wards, or would call into existence an illogical and ill-balanced scheme of representation. I am accordingly to suggest that the future Calcutta Corporation should, like that of Bombay, consist of two equal factors, the strength of which should be determined by that of the moiety now returned by what are in the main European interests. In other words it is advised that the Corporation should be composed of 50 members, 25 being elected as now by the 25 wards into which the city is already divided, and 25 being partially nominated (as now) by the Government and partially elected (as now) by bodies representing commercial interests. The Bombay model would in this way be faithfully reproduced, though with smaller numbers, in Calcutta. There would be created a strict equality and balance of interest between the European and the Native elements. And, owing to the fact that no reconstitution of the existing wards would be required, and that the European element would continue to be constituted as at present, the change could be introduced with the minimum of friction and delay. In speaking, however, of the European element the Government of India must guard themselves against a possible misinterpretation of the phrase. For convenience sake the term may be employed and has here been employed by them. But they are well aware that the section of the Corporation of which they are speaking need not necessarily be exclusively European in its composition; since it is to the Bengal Government and to the power of nomination enjoyed by the latter that certain non-European and Native elements of the population of Calcutta must look for representation, in the event of their being unable to secure it under the existing method of election by wards. The Government of Bengal have never failed in this respect to consider the interests of the sections of the population here alluded to; and it is not unlikely that under the amended scheme which is now suggested, their good offices may be called into action in defence of non-European and Native interests, that might otherwise remain unrepresented in the remodelled Corporation. To this extent must a qualification be admitted in the use of the phrase which has been employed in this paragraph.

18. The Select Committee have already in section 89A followed the Bombay model in giving to the Corporation power to appoint Special Committees to consider matters which are reserved by law for decision by the Corporation, and to delegate such of their duties to such Committees. The Bill also provides in section 88 for the appointment of Sub-Committees by the General Committee. But I am desired specially to suggest that that model be more nearly followed in the constitution of the General Committee. They note the special approval with which the Honourable Messrs. Narendra Nath Sen and Surendra Nath Banerjee draw attention to that feature of the Bombay constitution which provides for the formation of what is there known as the Standing Committee. Their words are as follow:—"The Standing Committee, corre

sponding to the General Committee under the Bill, is really a Committee of the Corporation, and not so merely in name, fully two-thirds of its members being elected by the Corporation. There is thus a feeling of solidarity among the majority of the members of the Standing Committee, who owe their position and are responsible to one central authority, whose policy they are obliged to carry out with the utmost loyalty." The Government of India, who see much force in this argument, are disposed to recommend to His Honour the Lieutenant-Governor a similar procedure at Calcutta. They think that a General Committee, thoroughly representative both of the principal interests involved and of the larger Corporation, and qualified to discharge the important duties which it is proposed to place upon its shoulders, might be constituted by the nomination, as in Bombay, of one-third of its total number of 12 members by the Government and by the election of the remaining two-thirds by the Corporation itself.

19. The circumstances of Bombay, however, differ materially from those of Calcutta, in one respect, viz., in the numbers and strength of the various communities that compose the total population of the city, and are represented in the Municipal body. The Bengal Government will doubtless, therefore, find it desirable to suggest some plan that will secure to that proportion (two-thirds) of the General Committee which is to be elected by the entire Corporation a strictly fair and proportionate representation of the constituent elements of the electoral body. Otherwise it might be possible for either party, in the chances of voting, by a bare numerical majority, to swamp the General Committee, and to secure that the entire two-thirds proportion should be of their own political complexion or class. Such a result would be destructive of that fairer representation of interests which the Government of India, equally with Sir Alexander Mackenzie and Sir John Woodburn, desire to secure. And it would be fatal to the harmonious co-operation of all parties in the future, which they hope by this suggestion to produce.

20. I am also to suggest that it might be desirable to lay down rules for the appointment of the Special Committees and Sub-Committees which would secure their being truly representative, in respect of their constituent elements, of the Corporation or General Committee appointing them. The provisions regarding the making of rules and bye-laws for the conduct of the business of Special Committees and Sub-Committees under sections 89A and 590, in connection with sections 595 and 597, might be extended to include their constitution in general agreement with the principles already laid down. It might not be necessary or feasible for all such Special Committees and Sub-Committees to be homogenous in constitution with the body appointing them; but it is clear that in some cases at least such homogeneity alone would secure efficiency and obviate friction.

21. Such are the outlines of the revision of the existing scheme which, in the interests of the future efficient and orderly administration of Calcutta, the Government of India commend to the consideration of the Government of Bengal. No scheme that can be proposed will secure the unstinted approbation of all parties. The Bill already introduced has excited no small share of criticism. Exception can also doubtless be taken to the provisions of the suggested, or indeed of any other possible, modification of that Bill. The Government of India, however, who in framing these proposals have been actuated by a sincere desire to promote harmony equally with good government in the future, entertain the hope that there may henceforward be a truce to such dissension, and that the Bill as remodelled may be accepted by all classes in the spirit in which its modification has been discussed and put forward by them. For the successful municipal administration of a city like Calcutta, composed of such various and important interests, and with fortunes so momentous at stake, are required both a high standard of public duty on the part of those of its citizens who may be willing to enter its service, and the friendly and disinterested co-operation of every section of the community. Such a co-operation the Government of India confidently hope that His Honour the Lieutenant-Governor may look forward to receiving. That evils and abuses have grown up in the existing municipal system will not be disputed. That they stand in need of correction cannot be denied. It should be the aim of all parties so to apply or to accept this correction as to purge the reputation of the city, of which they are the guardians,

from the least stigma of reproach, and to vindicate the wisdom of the decision that twenty-three years ago first accorded the privileges of Local Self-Government to the capital of the Indian Empire.

No. 276T.—M., dated Darjeeling, the 3rd July 1899.

From—E. W. COLLIN, Esq., Offg. Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Secretary to the Government of India, Home Department.

I AM directed to acknowledge the receipt of your letter No. 93, dated the 17th June 1898, conveying the views of the Government of India on the subject of the Calcutta Municipal Bill.

2. It is pointed out in paragraph 9 of your letter that there is a want of correspondence, in constituent proportions, between the Corporation, which is to consist of 75 members, of whom 50 are to be elected by wards and 25 are to be selected by Government and bodies representing commercial interests, and the new General Committee, which is to consist of 12 members to be constituted in the opposite proportion of 8 from the 25 members selected by Government and commercial associations, and 4 from the 50 members elected by the wards. It is anticipated that this lack of proportion, and the divergent interests which it may be expected to create, will be liable to produce friction between the two bodies upon whose harmonious co-operation the future government of Calcutta must depend. It is also observed that the defects of the existing Corporation have been due to a great extent to the fact that the numbers of the Municipal body were excessive. It is therefore proposed to reduce the number of Commissioners, so that the future Calcutta Corporation should, like that of Bombay, consist of two equal factors; and in order to effect this object, it is suggested that the Corporation should be composed of 50 members, 25 being elected by the 25 wards into which the city is at present divided, and 25 being partially (as now) nominated by Government and partially elected by bodies representing commercial interests. With regard to the General Committee it is suggested that the Bombay model should again be followed, with certain reservations necessary on account of the special features of Calcutta, and that two-thirds of its members should be elected by the Corporation. The object of the reservations suggested above is to secure that the members of the General Committee, who are to be so elected, should constitute a strictly fair and proportionate representation of the constituent elements of the electoral body.

3. The Lieutenant-Governor desires me to acknowledge the courtesy with which the Government of India have discussed the solution, which they have presented to his consideration, for the future government of Calcutta. The solution is one which had of course been examined by himself in studying the manifold criticisms upon the scheme of the Municipal Bill, and the precedent and authority of the Bombay system assumed, undoubtedly, the greater prominence when the dissenters from the report of the Select Committee had declared their general adherence to it. The Lieutenant-Governor has not therefore been surprised that an adaptation of the Bombay system to the circumstances and conditions of Calcutta is commended to him by the Government of India.

4. With the Government of India, as it has always been with himself, the first consideration is the good government of Calcutta—the prompt and efficient discharge of the multifarious duties which the administration of so great a city involves. The adaptation of the Bombay system, which the Government of India propose, does not conflict with the arrangements which he considered to be necessary in Calcutta to that end, and he has no objections to offer to the settlement of the issue on the lines they recommend. The reasons which led him personally to prefer the maintenance of the present numbers of the Corporation have been publicly stated and were before the Government of India. They have held that these reasons are outweighed by the danger of friction in a Corporation, where the executive and managing committee is out of harmony with the main body. Sir John Woodburn has never concealed the force of these objections, and he will not press his personal

opinion on this point further against the deliberate conclusion of the Government of India.

5. With regard to the suggestions in paragraph 19 of your letter, that provision should be made to secure to the portion of the General Committee, which is to be elected by the Corporation, a proper representation of the constituent elements of the Corporation, he recognizes that such provision is necessary. The necessary amendment will accordingly be introduced into the Bill.

WEATHER AND CROP REPORT.

For the week ending the 10th July 1899.

Burdwan.—Rainfall at Sadar 4·50, Kalna 3·55, Katwa 2·74, Raniganj 3·89. Weather seasonable. Transplanting of *aman* paddy going on briskly. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa decreased slightly. Common rice selling as follows:—

	Srs.	
Sadar	16 to 19	per rupee.
Kalna	15	
Katwa	18	
Raniganj	17	

Birbhum.—Rainfall at Sadar 3·24, Rampur Hât 3·20. Weather rainy and hot. Sowing of seed and tillage going on. Price of common rice at Sadar and Rampur Hât 18 seers per rupee. Fodder sufficient. No cattle-disease.

Bankura.—Rainfall at Bankura 5·55, Vishnupur ·88. Weather cloudy and rainy. Transplantation going on. Sugarcane growing. Fodder and water sufficient. No cattle-disease reported. Price of common rice at Bankura 17½ seers and at Vishnupur 17¼ seers per rupee.

Midnapore.—Rainfall at Sadar 1·91, Tamluk 4·02, Ghatal ·75. Weather seasonable. Transplantation going on. Prospects of sugarcane, jute and flax favourable. Cattle-disease reported from Chandrakona. Common rice selling as follows:—

	Srs.	
Sadar	14 to 20	per rupee.
Tamluk	14¼	
Ghatal	14 to 16	

Hooghly.—Rainfall at Sadar 7·92, Serampore 6·64, Jahanabad 2·60. Sowing of winter paddy going on. Excessive rain damaged jute and paddy. Cattle-disease in Sadar and Serampore. Common rice sells from 13 to 15 seers per rupee.

Howrah.—Rainfall at Sadar 5·77, Ulubaria 2·54. Weather cloudy with rain almost every day. Sowing of *aman* and *aus* still continues. Transplantation of *aman* going on. Some damage has been done to sugarcane and jute in Shingti outpost by floods. Paddy seedlings have also to some extent been damaged in places in Howrah and Ulubaria owing to recent excessive rain. Fodder and water sufficient. Common rice sells at 12 to 15 seers per rupee.

24-Parganas.—Rainfall at Sadar 6·92, Barasat 5·18, Basirhat 1·40, Diamond Harbour 6·79. Weather hot and rainy. Excessive rain is doing injury to *aus* and jute crops, and has retarded weeding operations. Transplantation of *aman* going on slowly. Cattle-disease reported from some parts of the Basirhat subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	13½ to 16	per rupee.
Barasat	16½	
Basirhat	18-4½ch.	
Diamond Harbour	16	

Nadia.—Rain at Sadar 3·96, Kushtia 1·22, Chuadanga 1·65, Ranaghat 4·99. Weather hot and cloudy with occasional rain. Prospects of crops promising. Fodder and water sufficient. Price of common rice stationary.

Murshidabad.—Rain at Sadar 3·76, Jangipur 2·60, Kandi 2·08. Weather cloudy. Transplantation of *aman* still going on. *Bhadoi* and jute plants doing well. Prospects of mulberry and indigo favourable. Paddy plants are under water in some parts of the Sadar subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Kandi	18½	

Jessore.—Rainfall at Sadar 2·14, Jhenida ·75, Magura 1·73, Narail 1·76, Bangaon 1·76. Weather cloudy, rainy and occasionally hot. Weeding of *aus* and jute going on. Prospects of standing crops good except in the Jhenida, Magura, and Narail subdivisions, where insects are damaging them. Cattle-disease reported from thana Gaighata. Fodder and water sufficient. Common rice sells as follows:—

		Srs.	
Sadar	16 to 20	}	per rupee.
Jhenida	16		
Magura	17 to 20		
Narail	20		
Bangaon	18		

Khulna.—Rainfall at Sadar 2·35, Bagirhat 1·64, Satkhira 2·94. Weather hot, cloudy and rainy. Cultivation for and transplantation of *aman* going on. Fodder and water sufficient. Cattle-disease reported from Rampal thana. Common rice sells as follows:—

		Srs.	
Sadar	19 to 23	}	per rupee.
Bagirhat	19		
Satkhira	15 and 20 (coarse *aus*).		

Rajshahi.—Rainfall at Sadar 3·83, Nator 2·15, Naugaon 3·95. Prospects of crops good. No cattle-disease. Fodder and water-supply plentiful. Rice sells from 16 to 22 seers per rupee.

Dinajpur.—Average rainfall 5·91. Weather seasonable. Transplantation of *haimanti* paddy has commenced. Weeding of *aus* and jute retarded by excessive rain. Cattle-disease reported from five thanas. Rice selling at 18 to 20 seers per rupee. Fodder and drinking-water sufficient.

Jalpaiguri.—Rainfall at Sadar 7·05, Alipur Duars 10·46. Weather hot and cloudy. *Bhadoi* paddy and jute doing well. *Haimanti* paddy being transplanted. Prospects good. Fodder and water sufficient. Common rice sells from 10 to 13 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 6·94, Siliguri 4·92. Weather seasonable. *Hills*—*Bhutta, bhadoi* paddy, and *chota marua* promising well. *Terai*—Jute, *bhadoi*, and sugarcane doing well; prospects good; *haimanti* paddy not yet transplanted. Coarse rice sells follows:—

		Srs.	
Hills	9 to 13	}	per rupee.
Terai	16 to 18		

Bhutta sells at Darjeeling 24 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 5·64, Gaibanda 3·56, Kurigram 4·60, Nilphamari 8·47. Weather rainy. Cutting of *aus* and transplanting of winter rice going on. Prospects good. Common rice selling from 16 to 22 seers per rupee. Fodder and water sufficient. Cattle-disease reported from some villages in thana Jaldhaka.

Bogra.—Average rainfall 3·70. Prospects good. Cultivation of land for *aman* still continues. Transplantation has begun. Common rice sells from 17 to 23 seers per rupee. Fodder and water ample.

Pabna.—Rainfall at Sadar 2·76, Sirajganj 1·43. Weather cloudy and rainy. Crops on low lands damaged in places, but otherwise prospects good.

Dacca.—Rainfall at Sadar 1·41, Manikganj 3·60, Munshiganj 1·51, Narainganj 2·18. Weather seasonable. Prospects of crops fair. Insects are destroying paddy and jute in the Sadar and Munshiganj subdivisions. In Manikganj *aus* paddy has been damaged in low lands by sudden rise of flood-water. Fodder available. No cattle disease. Price of common rice 16 to 19 seers per rupee.

Mymensingh.—Rainfall at Sadar 3·81, Kishorganj 3·79, Tangail 1·87, Netrokona 6·1 Jamalpur 3·65. Weather showery. Prospects of crops excellent. Condition of cr good. Fodder and water ample. Common rice sells as follows:—

		Srs.	
Sadar	...	20	} per rupe
Kishorganj	...	20	
Tangail	...	18	
	...	24	

Faridpur.—Rainfall at Sadar 1·55, Goalundo 3·34, Madaripur ·19. Weather seasonable. State and prospects of standing crops good. Common rice selling at 17 to 18 seers per rupee.

Backergunge.—Rainfall at Sadar 3·64. Weather seasonable. Prospects of crops fair. Common *aman* rice sells from 13 to 21 seers per rupee.

Tippera.—Rainfall at Sadar 5·42, Brahmanbaria 2·53, Chandpur 1·55. Weather seasonable. Standing crops doing well. *Aus* and jute beginning to be reaped in Brahmanbaria. Average price of common rice 19 seers per rupee.

Noakhali.—Rainfall at Sadar 3·42, Feni 2·14. Prospects of standing crops fair. Fodder sufficient. Price of rice stationary.

Chittagong.—1·55. Weather seasonable. Cultivation of *aus* in progress. Prospects fair. Prices stationary. Water and fodder sufficient.

Patna.—Rainfall at Sadar 2·95, Barh 1·11, Bihar 2·74, Dinapore 2·92, Bikram 2·78, Hilsa 4·50. *Makai* still being sown, but more rain will be injurious to this crop. Transplantation of *marua* almost completed. Paddy sowing going on. No cattle-disease. Fodder and water for cattle sufficient. Common rice in Patna sells at 19 seers per rupee.

Gaya.—Rainfall at Sadar 1·88, Jahanabad ·73, Aurangabad 1·31, Nawada 4·61. Transplantation of *marua* millet and sowing of paddy going on. *Bhadoi* injured a little by excessive rain. Common rice selling at 16 seers per rupee.

Shahabad.—Rainfall at Sadar 3·22, Buxar 5·12, Bhabua 6·73, Sasaram 3·70. *Bhadoi* and paddy sowing going on; those sown are coming on well. Sugarcane in Buxar reported to be damaged by heavy rain. Fodder and water sufficient. Cattle-disease reported from four villages in the Sasaram subdivision.

Saran.—Rainfall at Sadar 3·94, Siwan 1·80, Gopalganj 3·63. Weather showery. General prospects good. Weeding of *bhadoi* going on. Transplantation of paddy begun. Average price of common rice 14·12 seers and of *makai* 24·12 seers per rupee.

Champaran.—Rainfall at Motihari 2·25, Bettiah 4·62, Barharwa 3·13, Bagaha 3·35, Ramnagar 1·58. *Bhadi* sowings nearly finished and germinating well. Paddy transplantation going on. Prospects good. Weeding retarded by rain. *Makai* and indigo suffered somewhat from heavy rainfall. Price of common rice 13½ seers and of maize 22½ seers per rupee.

Muzaffarpur.—Rainfall at Sadar 13·34, Hajipur 2·51, Sitamarhi 4·40. A few days' sunshine is urgently required to facilitate the weeding of the *bhadoi* crop; otherwise prospects good. Prices are—Common rice 12 to 15 seers, wheat 16 to 18 seers, barley 23 to 24 seers, *makai* 23 to 24 seers, gram 22 to 23 seers, and *rahar* 20 to 21 seers per rupee.

Darbhanga.—Weather cloudy and rainy. Rainfall at Sadar 6·09, Samastipur 3·82, Madhubani 3·98. Sowing of *bhadi* almost completed. Transplantation of paddy has commenced. *Makai* and *marua* doing well. Common rice selling at Sadar 13½ seers per rupee. Fodder and water sufficient.

Monghyr.—Rainfall at Monghyr 3·57, Begusarai ·47, Jamui 2·36. Weather seasonable. Transplantation of *marua* commenced. *Bhadoi* and paddy sowings continue. Weeding of *bhadoi* commenced in places. Prospects generally good. Common rice sells as follows:—

	Srs.	
Monghyr	13 to 16	per rupee.
Begusarai	12 to 15	
Jamui	16	

Bhagalpur.—Weather wet and cloudy. Rainfall at Sadar 2·44, Banka 4·00, Madhipura 3·03, Supaul 2·57. Transplantation of paddy going on briskly. Sowings are in full progress except in Banka, where they are a little retarded by the heavy rain. Common rice sells at 15½ seers per rupee.

Purnea.—Rainfall at Sadar 6·26, Kishanganj 7·09, Araria 1·54. Weather rainy. Excessive rainfall retarded growth of paddy, jute and sugarcane. Transplantation of *aghani* on high lands going on. Dry weather much needed No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Kishanganj	15	
Araria	16	

Malda.—Rainfall at Sadar 5·88, Chanchal 7·77, Gajole 5·30. Weather hot and cloudy with frequent showers of rain. Transplanting of winter rice commenced in places. *Bhadoi* paddy and jute thriving well. Common rice sells at 18 seers per rupee.

Sonthal Parganas.—Average rainfall 3·76. All crops doing well, but Indian-corn needs fair weather. Indigo being cut in Rajmahal. Price of rice 14 to 18 seers, and of maize 20 to 30 seers per rupee. Cattle-disease in Rajmahal.

Cuttack.—Rainfall at Sadar 4·05, Jajpur ·90, Banki 1·92. Weather seasonable. *Sarad*, jute and sugarcane growing. *Beali* being weeded and harrowed. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

				S.	ch.	
Cuttack	...	...	...	17	1	per rupee.
Jajpur	...	...	...	17	1	
Banki	...	...	...	17	15	

Balasore.—Rainfall at Sadar 3·12. Sugarcane thriving well. *Beali* and *sarad* growing well, latter being reploughed. Rice sells from 16 to 24 seers per rupee in the interior, and at 17 seers per rupee at Balasore and Bhadrak. Cattle-disease prevailing in chakla Singla. Fodder and water sufficient.

Angul.—Rainfall at Sadar 1·63, Bisipara 1·12. Weather seasonable. *Bhadoi* and winter paddy seedlings doing well. Common rice selling at 24 seers per rupee in Angul and 15 seers at Bisipara. Condition of cattle generally good; but cattle-disease reported from some places.

Puri.—Rainfall at Sadar ·94, Khurda 1·44. Young plants of *sarad* and *mandia* growing well. *Bali* being harrowed. Sugarcane and other miscellaneous crops promise well. Fodder and water sufficient. Cattle-disease continues. Price of common rice stationary.

Hazaribagh.—Rainfall at Sadar 5·35, Giridih 3·90. Weather seasonable. Ploughing and sowing in progress. Prospects of sugarcane good. Common rice sells from 15 to 20 seers per rupee.

Ranchi.—Rainfall 3·53. Weather seasonable. Sowing of paddy continues. Rice sells at Ranchi 15 seers and in the interior from 16 to 21 seers per rupee. Fodder and water plentiful.

Palamau.—Rainfall 4·86. Weather cloudy. *Bhadoi* sowing going on. Sugarcane doing well. Rice selling at 16 seers per rupee.

Manbhum.—Rainfall at Sadar 3·29, Gobindpur 1·93. Weather seasonable. Prospects of crops generally good. Cattle-disease reported from thana Jhalda. Fodder and water sufficient. Average price of common rice at Sadar 18½ seers and at Gobindpur 17 seers per rupee. Supply sufficient.

Singbhum.—Rain 2·98. Prospects good. Transplantation going on. Rice sells from 16 to 20 seers per rupee.

General Summary.—The rainfall during the week has been general and heavy. Cultivation of winter rice is in active progress, but a cessation of rain is now generally required. Owing to excessive rain the young crops in the ground are reported to be suffering in several places and weeding is retarded. In Dacca and Jessore the insects are still damaging the rice and jute plants. There is ample supply of fodder in every district, but reports of cattle-disease continue to be received from many districts. Prices are practically stationary, the variations reported being very slight and confined to a few districts.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

REVENUE DEPARTMENT,
The 11th July 1899.

STOCKS OF RICE IN AND AROUND CALCUTTA.

No. 474 Statistics.—The following is published for general information.

F. A. SLACK,
Offg. Secy. to the Govt. of Bengal.

Statement showing the Stocks of Rice in and around Calcutta during July 1899.

BIHAR—*concluded.* ORISSA. CHOTA NAGPUR.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JUNE 1899.

WEATHER has been unusually settled throughout the month, especially over the Bay, where the advancing monsoon almost invariably gives rise to disturbances of more or less severity. During the past month there was not the least sign of cyclonic weather at any time, a fact which is the more remarkable, as shallow depressions such as occur during the monsoon season were not unfrequent in May. It is possible that the occurrence of these shallow depressions indicated the commencement of monsoon weather earlier than usual, a surmise which is supported by two noticeable features in the weather of May and the early part of June. The first of these was the typical monsoon weather with general cloud and heavy rainfall which obtained during a large portion of the month of May; the second that notwithstanding the low pressure in the east of the province, subsequent to the occurrence of these depressions, the wind circulation retained its usual monsoon directions over the Bay and the province.

The comparatively dry weather which prevailed over the west of the province in the early part of June was more of the nature of a break in the rains, and it came to an end in consequence of the formation of a shallow land depression about the 10th such as not unfrequently forms in July and August. Though the depression filled up soon after its first appearance, it caused the showery weather, which had been continuous in the eastern districts from the beginning, to extend westward over the whole province, and from about the 13th ordinary monsoon weather became established in the central districts, Bihar and Chota Nagpur.

The rainfall which occurred during the third week of the month was due, to a very large extent, to local thunderstorms, and these probably arose from the small variations of pressure and changing winds which in the moist and comparatively quiet condition of the atmosphere are likely to be followed by ascensional currents, formation of cumuli and heavy rainfall.

About the end of the third week pressure rose more over the province than over the Bay, and the gradient became not only less steep than was usual for the season, but less so than had been previously the case from the beginning of the month. Rainfall in consequence became lighter and more scattered, but only for a few days, as a brisk fall of pressure which began on the 23rd and continued on the 24th restored the distribution to a practically normal condition. A slight depression formed over Assam and East Bengal with almost general westerly winds. The depression was too shallow, however, to cause a regular cyclonic circulation of winds which remained so light that they were affected by the smallest changes of pressure. The changes which followed were always of small amount; but as they were of an oscillatory nature, upwards in the east, downwards in the west, or *vice versâ*, on successive days, the winds were constantly changing, and heavy general rainfall was received in all parts of the province, except the south-west. The rainfall was similar in character to what had occurred earlier in the month, was due to local disturbances, irregular in its distribution, and in places much above the normal amounts.

At the beginning of the month pressure was rising in the south-east of the Bay and falling over the province, where the gradient was moderately steep. Winds were normal in direction, south-westerly over the Bay and in the south-western districts and between south and east at other inland stations. Temperature was above the normal, but not by large amounts, except at a few stations in East Bengal and in the extreme west, where mean excess was between 5° and 8°. Showers were fairly general in East and North Bengal, and a few fell in South-West Bengal. Weather such as described above continued from day to day during the first ten days of the month with daily rainfall in the eastern districts and occasional showers, as on the 6th and 7th, further west. A ridge of slightly high pressure developed over the centre of the Bay, in consequence of which the pressure distribution was more uniform than usual for the season in that area, and weather was quiet and settled. Over the province, on the other hand, the gradient remained fairly steep.

On the 10th irregular pressure changes occurred over the province. A moderate to brisk rise was reported from Bihar and East Bengal, which with a slow fall in the central districts caused the slight depression referred to above as the only one during the whole month. Readings were above the normal at all stations, but most so in East Bengal, and the centre of the low pressure area was in the west of South Bihar with a fairly regular circulation of light cyclonic winds. The heavy rainfall which had been of daily occurrence in the eastern districts for some days extended westward, and in the course of the next two or three days reached the extreme west of the province.

This advance of cloudy rainy weather is shown by the temperature changes. On the 10th the difference from the normal varied from excess of 10° in Chota Nagpur to defect of 9° in Assam; on the 11th from excess of 2° in Orissa and Chota Nagpur to defect of 8° in Assam; and on the 12th there was a moderated defect in all districts.

A brisk to rapid rise of pressure occurred on the 11th in the depression area of the 10th, and readings were then above the normal at all inland stations by considerable amounts, more so than at coast stations, but a fall began on the 12th and continued for

several days, till a uniform distribution was established over the province. The small oscillations of pressure which then followed till about the end of the third week probably caused the continued showery weather which was a feature of those days, especially in the west of the province, where cloudy rainy weather prevailed with unusually low temperature.

Rainfall became less general on the 20th owing to the comparatively high pressure which obtained over the province for a day or two, and temperature became practically normal. Pressure fell on the 22nd, and showery weather such as occurred during the third week recommenced and continued without interruption till the end of the month. As before, the pressure distribution was uniform and winds light, so that the small oscillatory changes of pressure were sufficient to cause the local variations in the winds from east to west with thunderstorms and heavy falls of rain. Temperature remained low, with the largest defect, as in the previous period of showery weather, in the west of the province.

Pressure changes were much smaller than usual during June, owing to the absence of cyclonic disturbances, and the difference from the normal was never large. It was above the normal in the early part of the month for some time, and as subsequently the changes generally consisted of small oscillations about the normal, the means for the month are generally somewhat in excess. The greatest excess is ·03 inch in Orissa and part of South-West Bengal. Elsewhere the difference from the normal varies from excess of ·02 inch in East Bengal to a slight defect in the west of Bihar.

Temperature was above the normal during the first ten days, the excess being large in the western districts. After the showery weather became general it fell everywhere, and while the general rainfall continued, readings, both maximum and minimum, remained in defect, the largest differences being again in the west of the province.

The large excess in Chota Nagpur and Bihar in the early part of the month was largely neutralized by the subsequent defect, so that the means for the month differ by only small amounts from the normal. The difference in maximum readings varies from excess of less than 1° in Chota Nagpur to defect of 2° in South-West Bengal and Orissa, and in minimum readings from excess of 1° in North Bengal and Bihar to defect of less than 1° in Lower Bengal and Bihar. In South-West Bengal, Orissa and Assam the mean difference from the normal was on an average for the division from 1° to 1°·6, and in North Bengal, Bihar and Chota Nagpur the difference was less than half a degree.

Rainfall was general in the east of the province during the greater part of the month, especially in the Rangpur, Cooch Behar and Jalpaiguri districts, where it was continuous and heavy. In the central districts showers were of occasional occurrence during the first ten days, but in the extreme west it was altogether absent. Between the 10th and 13th monsoon weather was established, and from the latter date rainfall was daily reported in varying quantity from a large proportion of the measuring stations.

The general weather conditions were of a somewhat exceptional nature during the latter half of the month. No cyclonic storms occurred over the north of the Bay, so that the coast districts generally show deficient rainfall. Inland the heavier falls were caused by thunderstorms or small local disturbances, and consequently the distribution is less regular than usual. The total fall for the month is below the normal over the greater part of Orissa, the Sunderbans and over a tract of country in the neighbourhood of the Assam hills. In South-West Bengal and North Bengal there were centres of heavy rain, and over considerable areas surrounding these centres excess ranges up to 10 inches in the former and 15 or 20 inches in the latter. In the western and central districts there has been generally a small excess, except in Champaran, which is the only part of Bihar with deficient rainfall, though not to any great extent.

The average fall in North Bengal for the month is 21·9 inches, in East Bengal 17·4, in South-West Bengal and Chota Nagpur nearly 13, in Bihar 11·2, and in Orissa 8·5.

The following table gives a condensed view of the rainfall of the various divisions of Bengal in June, and in each of the previous months of the present year, as compared with the normal values for the same periods. The figures given represent the actual falls expressed as percentages of the normal falls :—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	Actual rainfall of first six months of 1899 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	230	52	17	135	116	122	113
North Bengal ..	270	49	112	93	85	127	112
East ,, ...	300	169	51	153	137	104	120
Bihar ...	224	56	17	283	101	143	136
Orissa ..	49	38	10	357	144	93	114
Chota Nagpur ..	164	24	Nil	255	85	154	126

The following table gives full data for the comparison of the actual and normal rainfall of the month of June in all districts in the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance being made for the area which each represents. This gives a more accurate average than the arithmetical means given in the monthly meteorological tables. The first column gives the normal district rainfall as determined from the rainfall records of the past 25 years; the second column the district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in the district; the third column expresses the ratio of the actual district rainfall of the past month to the normal as a percentage, while the fourth gives the percentage variation or the difference of column 3 from 100 :—

Percentage Table for June 1899.

Division.	District.	Normal district rainfall for June.	Actual district rainfall June 1899.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).

Meteorological Office, Bengal,
The 11th July 1899.

C. Little,
Meteorological Reporter to the Govt. of Bengal.

Abstract of the Results of Meteorological Observations taken at the Alipore Observatory in the month of June 1899.

	Inches.	Date.	Hour.
The mean pressure of the month	29·587		
The average pressure of June from 24 years' registers ...	29·549		
The highest pressure in the month	29·724	11th	10
The lowest pressure in the month	29·455	14th	16
The range of pressure	0·269		
	Hours.		
The total number of hours of bright sunshine during the month	32·7		
The maximum possible number of hours of sunshine ...	403·4		
	⊖		
The mean temperature of the month	84·4		
The average temperature of June from 24 years' registers ...	85·0		
The highest temperature in the month	97·2	1st	
The lowest temperature in the month	73·2	11th	
The range of temperature during the month	24·0		
The mean daily range of temperature	12·3		
The greatest range of temperature in one day	22·0	11th	
	Per cent.		
The mean humidity of the month	85		
The average humidity of June from 24 years' registers ...	81		
	Inches.		
The mean vapour tension of the month	0·995		
The average vapour tension of June from 9 years' registers ...	0·998		
The mean cloud proportion of the month	7·92		
The average cloud proportion of June from 22 years' registers ...	7·03		
	Ins.		
The total rainfall of the month	16·94		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	16·94		
The average fall of June from 48 years' registers ...	12·08		
The greatest fall in 24 hours	4·42	28th	
	Days.		
The number of rainy days in the month	19		
The average number of rainy days in June from 24 years' registers	19		
The mean maximum equilibrium temperature of solar radiation during the month	⊖ 142·5		
The mean difference of sun and air temperatures	52·0		
The greatest sun temperature	155·6	12th.	
The greatest excess of sun over air temperature	64·3	12th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	77·4		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	1·1		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	3·1	5th.	
	Miles.		
The mean movement of the wind per day	146·1		
The greatest movement of the wind in one day	260·0	9th	
The greatest movement of the wind in one hour	18·0	6th, 11 to noon and 3 to 4 P.M.	

The number of hours with winds from each of the 8 points—
N. 4, N.E. 3, E. 12, S.E. 114, S. 311, S.W. 223, W. 36, N.W. 12, Calm 5.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·5° higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew Standard thermometer, which is the standard of reference at the present Observatory.

G. W. KÜCHLER,

METEOROLOGICAL OFFICE, GOVT. OF INDIA, *For Meteorological Reporter to the Govt. of India.*
Calcutta, the 10th July 1899.

Results of the Meteorological Observations taken at the Alipore Observatory from 2nd to 8th July 1899.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	2 86
The total fall from 1st January to 8th July 1899	37·13
The average fall of the corresponding period for 24 years, Surveyor-General's Office	24·82

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; ≤, lightning.

WEATHER AND CROP REPORT.

For the week ending the 17th July 1899.

Burdwan.—Rainfall at Sadar 4·06, Kalna 8·37, Katwa 6·10, Raniganj 4·23. Weather seasonable. Transplanting of *aman* paddy going on briskly. Sugarcane, *til* and jute doing well. Fodder and water sufficient. Cattle-disease in Katwa decreasing. Common rice selling as follows:—

	Srs.	
Sadar	17 to 20	per rupee.
Kalna	15 to 16½	
Katwa	17	
Raniganj	16½	

Birbhum.—Rainfall at Sadar 9·38, Rampur Hât 2·82. Weather rainy. Transplantation of paddy going on. Price of common rice at Sadar 18 seers and at Rampur Hât 17½ seers per rupee. Fodder sufficient. No cattle-disease.

Bankura.—Rainfall at Bankura 8·72, Vishnupur 4·28. Weather rainy. Transplantation rapidly progressing. Fodder and water sufficient. No cattle-disease reported. Price of common rice at Bankura 17½ seers and at Vishnupur 17¼ seers per rupee.

Midnapore.—Rainfall at Sadar 11·63, Tamluk 8·49, Ghatal 5·22. Weather seasonable. Transplantation going on. Prospects of sugarcane, jute and flax favourable. Cattle-disease reported from Benapur outpost. Common rice sells as follows:—

	Srs.	
Sadar	12 to 20	per rupee.
Tamluk	14¾	
Ghatal	14 to 17	

Hooghly.—Rainfall at Sadar 6·06, Serampore 7·92, Jahanabad 3·31. Sowing of winter paddy going on. Excessive rainfall damaged jute and paddy seedlings. Cattle-disease reported from Pursura. Common rice sells from 12 to 16 seers per rupee.

Howrah.—Rainfall at Sadar 5·81, Ulubaria 7·99. Weather cloudy with heavy showers almost every day. Transplantation of *aman* retarded on account of heavy rainfall. Seedlings damaged in places in Ulubaria. Fodder and water sufficient. Common rice sells from 12 to 15 seers per rupee.

24-Parganas.—Rainfall at Sadar 6·76, Barasat 6·58, Basirhat 3·43, Diamond Harbour 10·50. Weather rainy. Excessive rainfall has injured the standing crops. Weeding and transplanting operations are at a standstill except at Basirhat, where transplantation of *aman* is reported to be going on. Cattle-disease reported from Basirhat subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	13 to 15	per rupee.
Barasat	16½	
Basirhat	18-13ch.	
Diamond Harbour	15	

Nadia.—Rainfall at Sadar 4·24, Kushtia 2·97, Meherpur 2·14, Chuadanga 2·40, Ranaghat 3·44. Weather cloudy and rainy. Prospects of standing crops promising. Paddy and jute are being damaged by insects in parts of Chuadanga and Ranaghat subdivisions. Fodder and water sufficient. Price of common rice stationary.

Murshidabad.—Rainfall at Sadar 3·70, Kandi 9·10, Jangipur 4·16. Weather cloudy. Transplantation of *aman* is still going on. *Bhadoi* in ear in some places. State of indigo and mulberry favourable. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Kandi	18½	
Jangipur	18	

Jessore.—Rainfall at Sadar 3·84, Jhenida 3·26. Magura 1·79, Narail 1·74, Bangaon 4·55. Weather cloudy and rainy Weeding of paddy and jute going on. Insects damaging the paddy. Early *aus* paddy is being harvested in Narail. Fodder and water sufficient. Cattle-disease reported from thana Gaighata. Common rice sells as follows:—

	Srs.	
Sadar	16 to 19	per rupee.
Jhenida	16	
Magura	17 to 20	
Narail	20	
Bangaon	17 to 18	

Khulna.—Rainfall at Sadar 1·47, Bagirhat 2·57, Satkhira 2·78. Weather hot, cloudy and rainy. Cultivation and transplantation of *aman* going on. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	19 to 23	per rupee.
Bagirhat	19	
Satkhira	15 and 20 (coarse *aus*).	

Rajshahi.—Rainfall at Sadar 1·03, Nator 1·5. Prospects of crops good. No cattle-disease. Fodder and water ample. Price of rice ranges from 16 to 22 seers per rupee.

Dinajpur.—Average rainfall 4·22. Weather seasonable. Transplantation of *haimanti* paddy has commenced. Cattle-disease reported from five thanas. Fodder and drinking-water plentiful. Rice selling at 18 to 20 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 4·48, Alipur Duars 2·59. Weather hot and cloudy. State and prospects of standing crops good. Transplantation of *haimanti* paddy rapidly going on. Fodder and water sufficient. Common rice sells from 10 to 13 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 9·95, Siliguri 3·61. Weather seasonable. *Hills*—*Haimanti* paddy being transplanted; *bhutta*, *bhadoi* paddy, and *chota marua* doing well. *Terai*—Jute, *bhadoi*, and *jamera* paddy doing well. Coarse rice sells as follows :—

				Srs.	
Hills	...	...	...	9 to 12	} per rupee.
Terai	...	...	...	16 to 17	}

Bhutta sells at Darjeeling 24 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 2·08, Gaibanda 1·20, Kurigram 3·26, Nilphamari 3·24. Weather hot and rainy. Cutting of *aus* and jute going on. Prospects good. Common rice selling from 16½ to 20 seers per rupee. Fodder and water sufficient. Cattle-disease prevailing in some villages in thana Jaldhaka.

Bogra.—Average rainfall 3·54. Harvesting of early *aus* and jute begun in some places. Preparation of land for and transplantation of *aman* going on. Prospects good. Fodder and water ample. Common rice sells from 16 to 23 seers per rupee.

Pabna.—Rainfall at Sadar 1·84, Sirajganj 6·17. Weather cloudy and rainy. Prospects of crops good in spite of some damage to low land paddy.

Dacca.—Rainfall at Sadar 4·95, Manikganj 2·77, Munshiganj 3·99, Narainganj 5·57. Weather seasonable. Prospects of crops fair. Insects are destroying jute and paddy in Sadar and Munshiganj subdivisions. *Aus* paddy in low lands in Manikganj damaged by sudden rise of water to certain extent. Fodder available. No cattle-disease. Common rice 16 to 20 seers per rupee.

Mymensingh.—Rainfall at Sadar 3·73, Kishorganj ·97, Tangail 7·81, Jamalpur 1·45. Weather dull and showery. Prospects of crops excellent. Condition of cattle good. Fodder and water-supply ample. Common rice selling at 20 seers per rupee.

Faridpur.—Rainfall at Sadar 2·67, Goalundo 3·24, Madaripur 3·53. Weather rainy. and seasonable. State and prospects of standing crops generally good. Common rice selling at 17 to 19 seers per rupee.

Backergunge.—Rainfall at Sadar 5·39. Weather seasonable. Prospects of crops fair. Common rice sells from 13 to 21 seers per rupee.

Tippera.—Rainfall at Sadar 1·60, Brahmanbaria 1·62, Chandpur 5·40. Weather seasonable. Jute being cut. *Aus* paddy doing well. Some damage to crops by insects reported from the Brahmanbaria subdivision. Average price of common rice 19 seers per rupee.

Noakhali.—Rainfall at Sadar 9·17, Feni 5·98. Transplantation of *aman* commenced. Prospects fair. No cattle-disease. Fodder and water sufficient. Price of common rice 14 to 21 seers per rupee.

Chittagong.—Rainfall 7·25. Weather seasonable. Cultivation of *aus* progressing In places it is being reaped. Lands being prepaired for *aman*. Prospects good. Prices stationary. Water and fodder sufficient.

Patna.—Rainfall at Sadar 7·40, Barh 13·34, Bihar 9·08, Dinapore 7·74, Hilsa 7·32, Fikram 3·41. The rain will do much damage to the *bhaddi* crops. Transplantation of *marua* continues in some places. Fodder and water for cattle sufficient. No cattle-disease. Common rice in Patna sells at 19 seers per rupee.

Gaya.—Rainfall at Sadar 8·15, Jahanabad 5·45, Aurangabad 2·20, Nawada 5·02. Paddy being sown. *Bhadoi* suffered much from excessive rain. Common rice selling at 16 seers per rupee.

Shahabad.—Rainfall at Sadar 7·67, Buxar 3·04, Bhabua 2·95, Sasaram 5·25. Sugarcane and *marua* good. *Bhadoi* reported to be damaged in Buxar and Sasaram owing to excessive rain. Twenty deaths out of 47 cases of cattle-disease reported from the Sasaram subdivision. Fodder and water abundant.

Saran.—Rainfall at Sadar 11·21, Siwan 4·35, Gopalganj 4·54. Weather rainy and cloudy. Prospects good. Weeding of *bhadoi* crops and transplanting of *aghani* paddy going on. Incessant rain not beneficial to the *bhadoi* crops. Clear and sunny weather very much wanted. Cattle-disease reported from Chatra police-station. Average price of common rice 14·11 seers and of *makai* 25·2 seers per rupee.

Champaran.—Rainfall at Motihari 7·00, Bettiah 2·77, Barharwa 6·06, Bagaha 6·62, Ramnagar 2·58. Prospects good. Paddy transplantation continues. *Bhadoi* sowings almost over. Weeding till retarded. *Makai* somewhat damaged by heavy rain. Price of common rice 13½ seers and of maize 22½ seers per rupee.

Muzaffarpur.—Rainfall at Sadar 9·05, Hajipur 7·59, Sitamarhi 6·63. *Bhadoi* crops damaged to some extent by excessive and continued rain. A few days' fair weather urgently needed to improve the *bhadoi* crops. Rice being transplanted where practicable. Prices are—Common rice 12 to 15 seers, wheat 16 to 18 seers, barley 23 to 24 seers, *makai* 23 to 24 seers, gram 22 to 23 seers, and *rahar* 20 to 21 seers per rupee.

Darbhanga.—Weather cloudy and rainy throughout the week. Rainfall at Sadar 3·66, Madhubani 8·92, Samastipur 11·52. Weeding of *bhadoi* crops is retarded owing to continued and heavy rainfall, which has done damage to the *bhadoi* crops. Cessation of rain for a week is badly wanted. Transplantation of paddy is in progress. Common rice selling at Sadar 13 seers per rupee. Fodder and water sufficient.

Monghyr.—Rainfall at Sadar 10·62, Begusarai 4·87, Jamui 2 62. Weather very rainy. Weeding retarded by rain. Transplantation of paddy and *marua* going on. *Bhadoi* sowing continues, but somewhat damaged by excessive rainfall. Rice sells as follows:—

	Srs.	
Monghyr	13 to 15	per rupee.
Begusarai	12 to 15	
Jamui	15½	

Bhagalpur.—Weather rainy and cloudy. Rainfall at Sadar 11·93, Banka 5·07, Madhipura 4·81, Supaul 4·02. Heavy rain damaging the *bhadoi* seedlings. Stray cases of cattle-disease reported from the three subdivisions. Common rice sells at 15¾ seers per rupee.

Purnea.—Rainfall at Sadar 6·56, Kishanganj 1·71, Araria 3·28. Weather rainy. Standing crops not doing well owing to incessant rain. Early-sown *bhadoi* in ear. Transplantation of *aghani* continues. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Kishanganj	15	
Araria	16	

Malda.—Rainfall at Sadar 3·52, Shibganj 3·16, Gajol 4·18. Weather hot and cloudy with frequent showers of rain. Transplanting of winter rice going on. Prospects good. Common rice sells at 18 seers per rupee.

Sonthal Parganas.—Heavy rain, especially in Dumka (10 inches) and Deoghur (13 inches) damaging the Indian-corn crop; prospects otherwise good. Price of common rice 13 to 18 seers, and of maize 17 to 32 seers per rupee. Cattle-disease in Rajmahal.

Cuttack.—Rainfall at Sadar 2·08, Jajpur 3·05, Kendrapara 2·02, Banki 1·41 Weather seasonable. *Sarad*, jute and sugarcane growing. *Beali* being weeded. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

	S.	ch.	
Cuttack	17	1	per rupee.
Jajpur	17	1	
Kendrapara	19	11	
Banki	17	15	

Balasore.—Rainfall at Sadar 7·63. Sugarcane thriving well. Re ploughing of *sarad* going on. Rice sells from 16 to 24 seers per rupee in the interior, and at 17 seers at Balasore and Bhadrak. Cattle-disease prevailing in chaklas Singla, Dhamnagar, and Chandbali. Fodder and water sufficient.

Angul.—Rainfall at Sadar 2·64, Bisipara 8·21. *Bhadoi*, winter rice and sugarcane crops thriving. Broadcasting and puddling of winter rice and transplanting of *mandia* in progress. Common rice sells at 24 seers per rupee at Angul and 15 seers at Khondmals.

Puri.—Rainfall at Sadar 2·14, Khurda 3·85. Young plants of *sarad*, *beali* and *mandia* growing well. Puddling commenced in places. Sugarcane and other miscellaneous crops promising. Fodder and water sufficient. Cattle-disease continues. Price of common rice stationary.

Hazaribagh.—Rainfall at Sadar 1·94, Giridih 4·86. Weather cloudy and rainy. Rain excessive for *bhadoi* crops. Ploughing and sowing in progress. Common rice sells from 15 to 20 seers per rupee.

Ranchi.—Rainfall 4·32. Weather seasonable. Agricultural prospects favourable. Rice sells at Ranchi 16 seers per rupee and in the interior from 16 to 23 seers per rupee. Health of cattle good. Fodder and water sufficient.

Palamau.—Rainfall 6·43. Weather seasonable *Marua* being planted. *Makai* injured to some extent by excessive rain. Sugarcane doing well. Rice sells at 16 seers per rupee.

Manbhum.—Rainfall at Sadar 5·74, Gobindpur 4·94. Weather seasonable. Prospects of crops generally good. Cattle-disease reported from thanas Jaldah, Raghunathpur, and Tundi. Fodder and water sufficient. Average price of common rice at Sadar 17½ seers and at Gobindpur 17 seers per rupee. Supply sufficient.

Singbhum.—Rain 2·97. Prospects of crops good. Rice sells from 16 to 20 seers per rupee.

General Summary.—There was general and heavy rain during the week. A break is now required. The autumn rice and jute crops in parts of South-West Bengal and the *bhadoi* crops in the Patna and Bhagalpur Divisions are reported to have been damaged to some extent, and transplantation of winter rice is retarded in some parts. Damage to crops by insects is reported from parts of Nadia, Jessore, Dacca, and Tippera. There is cattle-disease in several districts, but the fodder-supply is everywhere sufficient. Prices continue practically stationary.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

The total fall from 1st January to 15th July 1899	44·1[illegible]
The average fall of the corresponding period for 24 years, Surveyor-General's Office	27·51

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

RESOLUTION ON THE ANNUAL REPORT ON THE POLICE ADMINISTRATION OF THE TOWN OF CALCUTTA AND ITS SUBURBS FOR THE YEAR 1898.

RESOLUTION—No. 36J.R.T.

POLICE.

Dated Yacht Rhotas, the 18th July 1899.

READ—

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs for the year 1898.

The Annual Report of the Chief Presidency Magistrate.

The Annual Report of the Presidency Magistrate of the Northern Division.

Read also—

The Reports for the two previous years and the orders of Government recorded thereon.

Mr. James held the office of Commissioner of Police throughout the year.

2. The following table shows the total number of cognizable and non-cognizable offences reported in the town and suburbs of Calcutta during each of the last five years:—

	1894.	1895.	1896.	1897.	1898.
1	2	3	4	5	6
Town	41,512	45,291	51,855	52,866	65,058
Suburbs	13,014	13,589	15,064	13,761	13,428
Total ...	54,526	58,880	66,919	66,627	78,486

The abnormal rise in the town in 1898 is entirely due to an enormous increase in the number of applications for summonses under the Municipal Act, 33,105 having been received in the year under report against 17,617 in 1897. Of these applications, no less than 20,106 related to failure to take out licenses for professions, callings and trades, and 3,252 to similar failure in regard to carriages and animals. The increase is explained to have been due to a large number of people having left Calcutta or changed their shops during the scare caused by the plague. It has not been stated that it was wholly due to this cause and, from the inquiries made at the time, the Lieutenant-Governor was greatly disappointed to find that the main cause was nothing less than the laxity of the Municipal subordinates. Had they insisted on the punctual taking out of licenses, and applied for summonses against defaulters in due time, the Magistrates' Courts would not have been swamped with 14,416 applications in the month of June 1898. This matter formed the subject of correspondence with the Corporation; measures were taken to assist the Magistrates in the disposal of the work as quickly as possible and, after much delay, a system was introduced, which ought to have been adopted long before, for ensuring that neglect in taking out licenses shall have reasonably prompt notice and action. But it is altogether wrong that the Criminal Courts should be used as the ordinary method for enforcing the payment of taxes, and the Select Committee on the Calcutta Municipal Bill have most properly introduced a procedure for the recovery of arrears of these taxes, which will very greatly reduce the necessity for proceeding against defaulters in the Courts and prevent, the Lieutenant-Governor hopes, the possibility of the recurrence of a state of affairs, which justly excited very strong comment.

The table below compares the crime reported during the past five years in the town and suburbs together, showing separately cognizable and non-cognizable crime, and offences under the Indian Penal Code and under the Municipal and other laws:—

	1894	1895.	1896.	1897.	1898.
1	2	3	4	5	6
Cognizable—					
Penal Code	7,492	6,836	8,116	9,109	8,786
Miscellaneous	23,316	24,392	26,714	28,019	26,708
Non-cognizable—					
Penal Code	6,277	6,760	6,608	6,259	5,479
Miscellaneous	17,441	20,892	25,481	23,240	37,513
Total ...	54,526	58,880	66,919	66,627	78,486

The figures of cognizable crime for 1897 and 1898 given in the report have been found incorrect on investigation. The errors show much carelessness, which must be avoided in future.

3. In the following statement are shown the cognizable and non-cognizable cases which were sent up by the Police or taken up direct by the Magistrates during the last two years and the number tried and their results, and also the division of work between the Courts of the Presidency and Suburban Magistrates :—

Court.	Cases instituted.			Cases tried.				Number of cases ending in conviction.			
	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Cognizable cases sent up by the Police. Figures for preceding year.	7,520	670	6,777	6,045	399	3,584	10,028	6,467	277	2,629	9,373

The total number of cases tried in the town and suburbs during the year was 42,600, of which 38,202, or 89·67 per cent., ended in convictions. Of these the police sent up 29,390 cognizable cases and obtained convictions in 28,443, or 96·77 per cent. The Magistrates took up direct 2,138 cases and convicted in 798 or 37·32 per cent. Of 36,814 non-cognizable cases instituted in the town, only 8,810 were actually tried. The bulk of the cases which did not come on for trial were, no doubt, those under the Municipal Act, for omission to take out licenses, of which the Chief Presidency Magistrate explains that a very large number was struck off because service of processes could not be effected, while many more were dismissed owing to the licenses being subsequently taken out.

4. The cases declared false in the town and suburbs during the year were 152 in number, the percentage of false to true cases being ·19. Out of 111 false cases in the town, prosecutions under the Penal Code were instituted in 15. In 10 of these convictions were obtained, and fines were imposed, aggregating Rs. 77, in 4 cases the accused were discharged, and 1 case was withdrawn. Out of 41 false cases in the suburbs prosecutions were instituted in 8, in 7 of which convictions were obtained, fines aggregating Rs. 100 being imposed in 5 cases and the accused in the remaining 2 being sentenced to two and three months' imprisonment respectively. It is not shown whether any use was made of the provisions of sections 250 and 553, Criminal Procedure Code, in the Courts of the Stipendiary Magistrates. Information on this subject should be given in future reports. The number of prosecutions for false charges is again small, and the punishments awarded in the cases tried appear to be generally quite inadequate for so serious an offence.

5. *Property stolen and recovered.*—The value of property stolen in the town and suburbs was Rs. 2,76,460 against Rs. 3,06,963 in 1897, and the recoveries amounted to Rs. 1,82,350 against Rs. 1,72,629, the percentage on the property stolen being 65·95 against 56·23.

6. *Cognizable offences in the Town.*—The total number of cognizable offences in the town was 25,796 against 26,592 in the preceding year. A decrease occurred in offences, both serious and minor, against the person and property under the Indian Penal Code, and also in offences under special and local laws. There were 10 cases relating to coinage and forgery of currency notes against 7 in 1897, two important convictions being obtained in respect of forged notes. Two riots were committed in connection with plague measures, in both of which convictions were obtained. In 2 cases of murder capital sentence was passed: in 1 the accused is still at large, and in the fourth the murderer was found to be insane. There was one case of murder by robbers, in which no clue could be obtained. Cases of grievous hurt decreased from 47 to 39, and cases of kidnapping also showed a reduction from 6 to 1. The number of robberies was 3—the same as in 1897. Burglaries were fewer than in the preceding four years, being 124 against 152 in 1897, 185 in 1896, 134 in 1895 and 141 in 1894. Detection followed in 73 cases, and 77 persons were convicted. Thefts also show a large decrease, the total being 1,060 against 1,700 in 1897. Of these, 857 cases were detected, 855 persons being convicted. There was a further decrease in the number of cases of criminal breach of trust, the total for the year being 153 against 187 in 1897 and 476 in 1896. Many cases of a civil nature appear to have been formerly brought before the Magistrates. Action was taken against vagrants and bad characters under Chapter VIII, Criminal Procedure Code, in 242 cases against 80 in 1897, and 235 persons were required to furnish security for good behaviour against 85. The increase shows greater energy on the part of the police in a direction in which it was needed. The larger number of cases and of persons bound down possibly accounts in part for the decrease in burglaries and thefts. Offences against the Police and other Acts numbered 12,312 against 10,717 in 1897, and there were 108 prosecutions under the Shipping Act against 70 in 1897. The cases under the Port Act were 784 in number, being approximately the same as in the preceding year. Prosecutions for cruelty to animals showed a decrease from 7,323 in 1897 to 6,636 in the year under review.

7. *Non-cognizable crime in the Town.*—Three important cases of forgery were successfully prosecuted during the year. In one of them an attempt was made fraudulently to obtain possession of a large sum of money lying to the credit of a suit pending before the High Court. Several of these cases are under enquiry, and it appears that a number of persons have been engaged for some time in putting forward false claimants for money in deposit in the High Court. The number of cases under the Calcutta Municipal Act was nearly double that in the preceding year, as already shown. Bogus firms carrying on fraudulent business, details of which have been given in previous reports continue to decrease, the number at the end of the year being 42 against 57 at the end of 1897.

8. *Cognizable crime in the Suburbs.*—There was a decrease in cognizable offences in the suburbs from 7,301 in 1897 to 6,419 in 1898. It was common to all classes of crime, except class 1 (offences against the State, public tranquillity, safety, and justice). There were 7 cases of counterfeiting coin against 6 in the previous year. A serious riot occurred, in which two medical officers on plague duty were attacked by a mob. On their being followed into the second storey of a house where they had been given shelter by the owner, one of the officers fired and wounded two men, both of whom died subsequently. Seven of the rioters were convicted and sentenced to various terms of imprisonment. There were 3 murders against 4 and 29 cases of grievous hurt against 34 in 1897. Cases of hurt by a dangerous weapon fell from 38 in 1897 to 21 in the year under review. A dacoity occurred in the outlying Tollyganj section. Arrests were made, but no conviction was obtained. Burglaries and thefts showed a decrease from 127 and 631 cases respectively in 1897 to 71 and 330 cases in 1898. In the suburbs, as in the town, proceedings were taken against a larger number of vagrants and bad characters, under the preventive sections of the Criminal Procedure Code. Forty-one persons were sent up, and order to furnish security for good behaviour was passed against 26, 3 being still under trial at the end of the year.

9. *Non-cognizable crime.*—The total number of non-cognizable cases was 6,178 against 6,777 in the previous year. There was a decrease in the number of municipal cases from 5,270 in 1897 to 4,439 in 1898.

10. *Suicides and accidental deaths.*—There were 89 suicides during the year against 101 in 1897. The number of accidental deaths was 329 against 331 in 1897. The Police appear to have exercised greater vigilance in checking rash driving, 130 drivers having been prosecuted for this offence against 100 in 1897. The number of fatal accidents in the Port of Calcutta was 87, of which 73 were by drowning.

11. *Working of the Arms Act.*—At the beginning of the year 3,249 fire-arms were in the hands of licensed dealers. The number imported was 3,715, and 1,319 weapons were purchased in the country. In all 5,309 weapons were sold against 5,568 in 1897. The balance in hand at the end of the year consisted of 3,610 pieces Importations of guns and rifles were smaller than in the previous year. The figures show that revolvers and pistols are imported in steadily increasing numbers year by year. Twelve prosecutions were instituted under the Arms Act during the year. The most important case was a prosecution of an officer of a German steamer for importing a number of revolvers and offering them for sale without a license.

12. *European Vagrancy Act.*—At the close of 1897 there were 17 European vagrants in the Work-house, and 48 were admitted during the year. Twenty-seven were released on obtaining employment. Altogether 11 persons were deported, after entering into agreements under the Vagrancy Act. Twenty-two seamen had resort to the Alms-house, and passages were arranged for them by the Superintendent.

13. *Fire-Brigade Act.*—The Brigade was employed at 40 fires during the year, 13 in the town and on the river, 13 in the suburbs, and 14 in Howrah. The number of fires attended in 1897 was 32. The manual engines at out-stations rendered assistance in 10 fires. Eighty-nine other fires occurred in which the loss was trifling, being under Rs. 7 in each case. The estimated loss of property by fire during the year was Rs. 4,92,220 against Rs. 2,43,760 in 1897.

14. *Strength and discipline of the Police Force.*—The sanctioned strength of the Force at the end of the year was 3,004 against 3,007 on the last day of 1897. This number includes police permanently supplied to the Port Commissioners and other public bodies and private individuals. Sixteen members of the force were punished judicially during the year against 5 in 1897. Fifty-nine men were dismissed against 60 in 1897. The total of minor punishments was 501. There were 20 desertions against 6 in the preceding year. Proposals were submitted to the Government of India during the year for sanction to a considerable increase to the strength of the Force, and final orders are awaited. The necessity for a body of armed police was again felt in the past year, during the excitement which arose on the occurrence of plague and the adoption of precautionary and preventive measures. A large force of Military and Reserve Police was brought down from the districts, and their presence in the city proved of great value to the Commissioner of Police in preserving order.

15. *Old offenders and Anthropometry.*—The police kept surveillance over 744 released offenders. Out of 1,093 persons convicted of offences againt property, and whose antecedents were unknown to the police, previous convictions were proved against 164—by means of anthropometry in the case of 27, and by finger-prints in the other cases. Previous convictions were proved against 480 offenders in all, against 517 in the previous year.

16. *Judicial Work.*—Mr. Pearson was on leave from the beginning of the year until the 2nd April, from which date until the end of the year he held the office of Chief Presidency Magistrate. Mr. Bonnaud officiated during his absence. The Hon'ble Nawab Bahadur Syed Amir Hussein, C.I.E., was Magistrate of the Northern Division during the year, except from the 14th October to the 28th November 1898, when Mr. Bonnaud acted.

17. *Court of the Chief Presidency Magistrate.*—The total number of cases instituted during the year and pending from the previous year was 10,930 against 11,286 in the previous year. A total of 11,963 persons was concerned in these cases, of whom 10,659 were convicted and 1,292 discharged.

Appeals were preferred against the order of the Court in 27 cases. In 21 cases the appeals were summarily rejected and in 6 they were dismissed. Motions were made to the High Court in 8 cases, of which 1 only was successful.

18. *Court of the Northern Division Magistrate.*—The total number of cases instituted was 16,812 against 16,966 in the year preceding. Of 18,749 persons appearing before the Court, 17,989 were convicted and 696 were acquitted or discharged. Appeals were preferred in 42 cases, and the order of the Lower Court was upheld in all except 1, which was remanded for re-trial. Motions were made to the High Court in 22 cases, and of these 1 was partially successful, the case being remanded for further evidence.

19. The following statement compares the number of persons against whom process issued in non-cognizable cases, with the numbers actually appearing before the Court in each of the past two years:—

Name of Court.	Number of persons against whom process issued.		Number of persons actually appearing.		Percentage of persons appearing to persons against whom process issued.		Remarks.
	1897.	1898.	1897.	1898.	1897.	1898.

Chief Presidency Magistrate ..	2,837	2,321	857	886	30·2	38·2	
Presidency Magistrate, Northern Division.	4,904	3,636	1,351	1,138	27·5	31·8	
Honorary Presidency Magistrates ...	19,880	32,637	12,174	17,320	61·2	53	
Total ...	27,621	38,594	14,382	19,364	52	50·2	

20. *Work of Honorary Magistrates.*—A total of 2,070 cases was transferred for trial to the Bench of Honorary Magistrates against 2,493 in the previous year, and 2,599 cases to Honorary Magistrates sitting singly as compared with 2,944 in 1897. Of the 4,669 cases thus transferred, 3,264 were from the Southern and 1,405 from the Northern Division. Of 6,475 persons who appeared before the Courts in these cases, 4,659 were convicted and 1,788 acquitted or discharged. Appeals were preferred in 14 of the cases, but the conviction was upheld in all. The High Court was moved in 6 cases, in 2 of which the order was set aside. The number of Municipal cases which came before the Honorary Magistrates was 32,702. Of these, 16,890 were struck off, and of the 15,812 cases which came on for trial, 10,271 resulted in acquittal or discharge and 5,227 in conviction. The amount of fines imposed in Municipal cases was Rs. 30,989-14 against Rs. 23,280-14 in the previous year. Out of this amount a sum of Rs. 22,257-8 was realised. Practically the whole of the cases instituted by the Corporation under Act II (B.C.) of 1888 is disposed of by the Honorary Magistrates. The very large number of cases struck off indicates much waste of labour in issuing processes, which could have been avoided if the Municipal establishment had been more energetic in compelling the taking out of licenses. An extra clerical staff had to be employed. Since the commencement of the present year three additional clerks have been sanctioned for the Bench for one year. If it be found necessary to retain this establishment permanently, the matter should be separately submitted for the orders of Government. The Lieutenant-Governor desires to thank the Honorary Magistrates who have assisted in disposing of the large amount of work done by the Bench, and especially those whom Mr. Pearson mentions as having frequently attended out of their regular turn to take the place of absentees.

21. Since the close of the year the Government has received representations from public bodies urging the necessity for the appointment of a third Stipendiary Magistrate. The matter will be settled on the Lieutenant-Governor's return to Calcutta.

22. The efficiency of the Calcutta Police Administration has been maintained under Mr. James' control, and he again acknowledges the assistance rendered by Mr. Paget, the Deputy Commissioner. Several of the Superintendents and Inspectors are commended for their good work.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of Police, Calcutta, for information and for communication to the Presidency Magistrates.

Ordered that a copy of the Resolution be forwarded to the Commissioner of the Presidency Division; the Chairman of the Corporation of Calcutta, and the Municipal Department of this Government, for information.

Ordered also that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Chief Secretary to the Govt. of Bengal.

RESOLUTION ON INLAND EMIGRATION REPORT FOR 1898.

GENERAL DEPARTMENT.—EMIGRATION.

Calcutta, the 20th July 1899.

RESOLUTION—No. 2135.

READ—

The Report of the Superintendent of Emigration, Calcutta, on Inland Emigration for the year 1898.

DR. C. BANKS held the appointment of Superintendent of Emigration throughout the year.

2. In accordance with the orders of Government contained in paragraph 3 of the Resolution on the Inland Emigration Report for 1897, the Superintendent of Emigration has in section I of his Report summarized the more important questions connected with Inland Emigration which engaged the attention of Government during the year. These were—

(1) the precautionary measures adopted by Government to protect the tea industry from the spread of the plague;

(2) the arrangements for the segregation of emigrants infected with cholera, small-pox, and other contagious diseases at Sara, Naihati, and the various halting places along the emigration routes to the labour districts in Assam;

(3) the revision of the rules issued under the Assam Labour and Emigration Act, I of 1882, and the Inland Emigrants' Health Act, I (B.C.) of 1889, in order to improve the transit of emigrants to Assam, Sylhet and Cachar; and

(4) the opening of an alternative route for emigrants proceeding to Cachar and Sylhet *viâ* Chandpur.

The arrangements under items (2) and (3) in the above list are now being carried out, the orders of the Government of India as to the establishments proposed for the various halting places having been recently received.

Besides these administrative measures, the amendment of the Assam Labour and Emigration Act, I of 1882, with the object of removing abuses in connection with the recruitment and despatch of coolies to Assam, was under consideration, and since the close of the year the opinion of this Government on the subject has been submitted to the Government of India.

3. *Contractors' emigrants.*—There were three licensed contractors with depôts in the suburbs of Calcutta during 1898, of whom one closed his business on the 9th July 1898. They had 14 recruiters working under them as against 15 in the preceding year, and they registered 2,867 coolies as against 5,227 in 1897. This large decrease of 2,360 in the number of emigrants recruited on behalf of licensed contractors during the year was no doubt due to the greater prosperity of the agricultural population and the abundance and cheapness of food-supplies. Of the 2,867 coolies, all but 30 were registered in the 24-Parganas, which corroborates the conclusion drawn in last year's Resolution that contractors depend largely on the numerous free emigration depôts in Calcutta for their supply of labour. Of the coolies registered, 45 per cent. were natives of Bengal; 1·5 came from Bihar; nearly 5 per cent. were natives of Orissa; hardly any came from the North-Western Provinces and Oudh; 21 per cent. were natives of the Central Provinces; 7 per cent. of Central India; and 19 per cent. were natives of Madras. These details are based on the statements of the emigrants themselves, and cannot be regarded as absolutely correct. Out of the 2,867 emigrants, 5 were discharged and 6 deserted from sub-depôts, reducing the total number to 2,856. To this number must be added 99 coolies who were already in the depôts on the first day of the year, and one infant born in a depôt, raising the total number of persons accommodated in the depôts to 2,956. Of these, 41 were discharged, 78 deserted, 3 died, 1 was rejected, 52 remained over in the depôts at the close of the year, and 9 were unaccounted for. These last belonged to the depôt which was closed during the year. The percentage of sickness during 1898 amounted to 0·27 as against 1·82 in the previous year, and the death-rate per mille was 1·01 as against 6 87. These figures show that the health

of the emigrants was good, and no case of cholera, small-pox, chicken-pox or measles occurred during the year. The percentage of contracts for four years on the total number of contracts registered rose to 90·9 as against 81·4 in the previous year. The emigrants despatched to Goalundo numbered 2,817, including 49 despatched from Calcutta on the 31st December 1897. Of these, 1,957 emigrants were landed in Assam, and 839 went to Cachar and Sylhet.

4. *Special Local Agents.*—During the year under report 11 special local agents were licensed as against 8 in the previous year. Their recruiting operations, which were confined to the districts of Manbhum, Ranchi, the Sonthal Parganas, and Singhbhum, resulted in the enlistment of 7,447 emigrants as against 15,471 in 1897. This considerable falling off in the number registered, notwithstanding the employment of a larger number of special local agents, must also be attributed to the return of prosperity locally. The proportion of labourers to dependents was approximately 3 to 1. Of the entire number, Manbhum contributed nearly 73 per cent., Ranchi 26·5 per cent., and the Sonthal Parganas 0·5 per cent. Of the total number of emigrants, 7,261 were registered for Assam, 81 for Cachar and 105 for Sylhet. Of these, 5,386 were despatched to Goalundo, where they arrived without casualty, while at Goalundo there were 34 releases and 7 desertions, the number of emigrants being thus reduced to 5,345, of whom 5,207 were embarked for Assam, 80 for Cachar and 58 for Sylhet. Of the number despatched to Assam, 15 deserted and 9 died, 8 of the deaths being due to cholera, the percentage of the total number of casualties amounting to 0·46 and of deaths to 0·17 as against 0·84 and 0·69, respectively, in the previous year. No casualties occurred among the emigrants embarked for Cachar and Sylhet. One hundred and eighteen emigrants left for Assam *viâ* Dhubri, and duly arrived at their destination.

5. *Certificated garden sardars.*—There were 4,306 certificated garden sardars and 31 sardarnis as against 4,439 sardars and 65 sardarnis in 1897. The marginal table gives the number for each of the last five years, and shows that the number of sardars and sardarnis has been gradually on the decrease since 1895. No licenses of local agents were cancelled or certificates of garden sardars withdrawn during the year. The number of coolies registered by garden sardars and sardarnis amounted to 13,624 and 71, respectively, as against 18,775 and 184 in the previous year—a decrease, for which the prosperity of the agricultural population and the abundance and cheapness of food-grains is again responsible. Of the 13,695 emigrants, 12,522 were registered for Assam, 361 for Cachar, and 812 for Sylhet. The total number of emigrants who left the districts of recruitment during the year for embarkation at Goalundo was 19,280, of whom 10 were released, 2 deserted, and 2 died at Goalundo. Of the remaining 19,266, 17,052 were embarked for Assam, 875 for Cachar, and 1,339 for Sylhet. Out of the 918 sardari emigrants who were despatched to Assam *viâ* Dhubri, 4 died of cholera at that place, and the remaining 914 were landed at their destination as there was no casualty on the passage by steamer.

Year.	Number of—		
	Sardars.	Sardarnis.	Local agents.
1894 ...	5,274	156	138
1895 ...	5,317	164	172
1896 ...	4,748	73	164
1897 ...	4,439	65	119
1898 ...	4,306	31	144

6. *Free emigrants.*—The figures as to free emigration, which are only approximately accurate, are derived from information received from the Emigration Agents at Goalundo and Dhubri as to the number passing through these stations. Their reports show that 21,054 free emigrants left the recruiting districts for Goalundo, and 1,463 for Dhubri, giving a total of 22,517 as against 54,934 in 1897. Of the coolies who travelled *viâ* Goalundo, 3 deserted, 2 died, and 31 were released at that place, the total casualties thus amounting to 36. Of the remaining 21,018 emigrants, 8,314 were bound for Assam, among whom 2 desertions and 8 deaths subsequently occurred, but no casualty of any description occurred *en route* among the 4,465 and 8,239 free emigrants who embarked for Cachar and Sylhet, respectively. Out of the 1,463 free emigrants who were despatched to Dhubri, 1,431 eventually arrived, the casualties numbering 32 as against 187 in the previous year. In addition to this number, 6,950 free emigrants who embarked at Goalundo were landed at Dhubri for the purpose of executing contracts, bringing the actual number of arrivals at Dhubri to 8,381. This number was increased

by the 5 emigrants that remained at Dhubri at the close of the previous year to 8,386. Among these there were 218 casualties, viz., 208 released, 6 desertions, and 4 deaths. Eventually 8,155 were re-embarked and 13 left behind at Dhubri. Of the number embarked, 7,952 executed labour contracts, and 203 proceeded as free emigrants.

7. *Execution of contracts.*—The following statement gives the figures connected with the execution of contracts under the Assam Labour and Emigration Act I of 1882:—

Place.	Three years.				Four years.				Grand Total.
	Contractors' coolies.	Special local agents' coolies.	Garden sardars' coolies.	Total.	Contractors' coolies.	Special local Agents' coolies.	Garden sardars' coolies.	Total.	
1	2	3	4	5	6	7	8	9	10
Assam	.....	.....	225	225	1,574	5,282	6,589	13,445	13,670
Cachar	.....	13	147	160	384	40	50	474	634
Sylhet	202	14	312	528	62	42	158	262	790
Total for 1898 ...	202	27	684	913	2,020	5,364	6,797	14,181	15,094
Total for 1897 ...	694	643	8,496	9,833	3,041	9,645	1,354	14,040	23,873

Fifteen thousand and ninety-four contracts were executed during 1898, of which 6 per cent. were for three years, and 94 per cent. for four years. In 1897 the number of contracts executed was 23,873, of which 41 per cent. were for three years, and 59 for four years.

8. *Offences connected with emigration and inspection of depôts.*—The quarterly returns of offences connected with emigration submitted by district officers and their annual reports of inspection of cooly depôts are dealt with separately, and need not be noticed here.

9. *Summary.*—The following table summarizes the statistics of emigrants registered to proceed during the year from the recruiting districts to the labour districts in Assam *viâ* Calcutta, Goalundo, and Dhubri:—

	1897.				1898.			
	Viâ Calcutta.	*Viâ* Goalundo.	*Viâ* Dhubri.	Total.	*Viâ* Calcutta.	*Viâ* Goalundo.	*Viâ* Dhubri.	Total.
1	2	3	4	5	6	7	8	9
Number registered through licensed contractors.	5,227	.....	.....	5,227	2,863	.....	4	2,867
Number registered through special local agents.	.....	11,881	3,590	15,471	.....	5,511	1,936	7,447
Number registered through certificated garden sardars.	.....	15,519	3,440	18,959	.....	8,482	5,213	13,695
Free emigrants	.....	46,940*	7,994	54,934	.....	21,054*	1,463	22,517
Total ...	5,227	74,340	15,024	94,591	2,863	35,047	8,616	46,526

* These figures include the free emigrants who were landed at Dhubri for execution of contracts.

Taking all classes of emigrants together, the results of the year's operations show that during 1898 there was a decrease of 48,065 in the number of coolies embarked for the labour districts in Assam, an obvious consequence of the abundant harvests and improved comfort of the later year.

10. *Transport.*—Emigrants were conveyed from Goalundo to the labour districts by steamers, and these vessels were inspected at certain places *en route* by officers specially appointed for the work. The average length of the river journey to Assam was during 1898 from six to eight days, and to Cachar and Sylhet from one to six days. Of the 3,934 batch way-bills of emigrants proceeding *viâ* Goalundo, issued in 1898, 3,443, or 87 per cent., were eventually returned to the Superintendent of Emigration. In 1897 out of a total of 4,199 batch way-bills issued, 3,634, or 86 per cent., were returned to that officer. In regard to the despatches from Dhubri, out of a total of 261 batch way-bills issued, 209, or 80 per cent., were returned in 1898 as against 817, or 77 per cent., in the preceding year.

11. *Casualties.*—As compared with the decrease in the number of emigrants despatched to the labour districts, there has been more than a corresponding

decrease in the total number of casualties, the total of which fell from 2,507, or 2·53 per cent., in 1897 to 609, or 1·19, during the year under report. Deaths from cholera amounted to 0·11 per cent. as against 0·99 per cent. in the preceding year, while the mortality from other causes fell from 0·12 per cent. during 1897 to 0·03 per cent. in 1898. The number of casualties among free emigrants also decreased from 2·53 per cent. in 1897 to 1·43 per cent. during 1898. There has been also a considerable decrease in the number of deaths among this class of emigrants, which was only 24, or 0·1 per cent., during 1898, as against 541, or 0·98 per cent., during 1897.

12. The thanks of Government are due to Dr. Banks for the active and careful discharge of his duties as Superintendent of Emigration. There was a marked improvement in all the circumstances and arrangements relating to coolie emigration to Assam.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE LEGAL AFFAIRS OF THE GOVERNMENT OF BENGAL FOR THE YEAR 1898-99.

No. 37J.R.T.

RESOLUTION.

JUDICIAL.

Dated Yacht Rhotas, the 20th July 1899.

READ—

The Report on the Legal Affairs of the Government of Bengal for the yea r 1898-99.

Read also—

The Reports of the two previous years, and the orders of Government recorded thereon.

The report is submitted by Mr. Pratt, who was Legal Remembrancer at the close of the year. There were several changes in the appointment during the year, due to the temporary promotion to the High Court of Mr. Wilkins, the substantive incumbent, and Messrs. Pratt and Gupta, officiating incumbents.

2. Only one appeal in which the Government is interested was pending before the Privy Council. It relates to a claim to lands against the Syedpore Trust Estate, which is managed by the Collector of Khulna. The appeal is against a decision of the High Court, on appeal, rejecting the claim.

3. The table below compares the results of Government litigation in all the Civil Courts of Bengal during 1898-99 with those of the two preceding years :—

	Original suits.			Appeals— Before Lower Courts.			Appeals— Before High Court.			Total.			Remarks.
	1896-97.	1897-98.	1898-99.	1896-97.	1897-98.	1898-99.	1896-97.	1897-98.	1898-99.	1896-97.	1897-98.	1898-99.	
1	2	3	4	5	6	7	8	9	10	11	12	13	14
1. Decided in favour of Government.	118	143	142(*a*)	35	51	30(*b*)	14	33	26(*c*)	167	227	198	(*a*) 17 cases wer governed by 8 judgments.
2. Decided against Government.	54	36	75(*e*)	7	10	16(*d*)	6	3	5	67	49	96	(*b*) 5 appeals by 2 judgments.
3. Compromised, remanded or withdrawn.	24	29	48	2	1	6	2	4	33	28	34	87	(*c*) 29 cases by 7 judgments.
4. Percentage in favour of Government.	72·8	82·1	71·5	83·3	91·1	69·2	73·6	91·3	78·2	74·5	83·2	71·7	(*d*) 7 appeals by 3 judgments. (*e*) 9 appeals by 1 judgment.

Excluding cases under the Land Acquisition Act, the figures are as follow :—

	Original suits.			Appeals— Before Lower Courts.			Appeals— Before High Court.			Total.			Remarks.
	1896-97.	1897-98.	1898-99.	1896-97.	1897-98.	1898-99.	1896-97.	1897-98.	1898-99.	1896-97.	1897-98.	1898-99.	
1	2	3	4	5	6	7	8	9	10	11	12	13	14
1. Decided in favour of Government.	103	121	88	35	51	30(*b*)	14	21	12	134	193	130	(*a*) 20 cases were governed by 3 judgments.
2. Decided against Government.	37	26	49(*a*)	7	10	16(*c*)	5	2	4	49	38	69	(*b*) 8 appeals by 2 judgments.
3. Compromised, remanded or withdrawn.	19	27	31	2	1	6	2	3	33	23	31	70	(*c*) 7 appeals by 3 judgments.
4. Percentage in favour of Government.	79·2	82·3	73·3	83·3	91·1	69·2	73·6	91·3	75	77·4	85·5	72·5	

There was an increase under all heads of litigation except that of appeals in the Lower Courts, the total of all cases being 381, against 310 and 262 respectively in the two preceding years. Excluding suits compromised, remanded or withdrawn, the percentage of successful cases was lower than in either of the two preceding years, being 71·7 against 82·2 and 74·5 in 1897 and 1896 respectively.

4. Out of 64 appeals before the High Court, 33 are shown as having been compromised, remanded or withdrawn. It would be convenient if in future years the cases remanded are shown separately from those compromised or withdrawn. Five cases were decided against Government and of each of these the Legal Remembrancer gives a brief account. In three the Government was defendant-respondent, and in two defendant-appellant. In the Lower Appellate Courts the percentage of successful cases was 69·2, twelve cases being decided against Government. In five of these a second appeal has been preferred to the High Court. In the Courts of first instance there were 265 cases, out of which 48 were compromised or withdrawn, while of the remainder 71·5 were decided in favour of Government, two or more cases governed by one judgment being counted as one. No special interest appears to attach to any of the litigation in which the Government was concerned during the year, and no irregularities on the part of officers giving rise to litigation are brought to notice.

5. The following statement shows the result of Court of Wards' litigation during the last three years :—

	1896-97.	1897-98.	1898-99.
Decided in favour of the Court of Wards ...	2,206	3,041	2,439
Ditto against the Court of Wards ...	162	183	186
Compromised, remanded or withdrawn ...	159	249	184
Percentage decided in favour of the Court of Wards	93·1	94·3	86·8

The percentage of successful appeals before the High Court was 85·7, against 60 in the previous year and 75 in 1896-97. This result is satisfactory. That in the Lower Appellate Courts was less so, only 56·6 per cent. of the cases having been successful, against 76·5 in the preceding year. In the Courts of first instance the number of cases was large, 2,625 suits having been instituted. Of these, excluding cases compromised or withdrawn, 95·3 per cent. were successful.

6. The following table shows the amounts realised under decrees in favour of Government during the year 1898-99 compared with the two preceding years :—

	1896-97.	1897-98.	1898-99.
Brought forward from last year	41,435	43,057	55,284
Decreed during the year	22,196	33,311	18,769
Total amount due	63,631	76,368	74,053
Amount realised	20,574	21,084	20,630
Percentage of amount recovered to total amount due	32·3	27·6	27·8

The percentage of realisations was practically the same as in the preceding year. The heaviest outstanding balances were in the districts of the 24-Parganas, Ranchi, Midnapore, Tippera, Darbhanga, Gaya, Faridpur, Chittagong and Backergunge. The explanations given of the short realisations show that in Midnapore, Gaya, Faridpur and Chittagong the success attained in realising amounts which were recoverable during the year was very small. A sum of Rs. 450-5-6 was distributed in rewards to officers in three districts whose special exertions led to the recovery of sums aggregating Rs. 3,800-6-9, which could not be realised in the ordinary way.

7. In Court of Wards' cases the realisations under decrees were worse than in either of the two preceding years, being only 26·3 per cent. against 30·2 and 28·8. The attention of the Commissioners concerned will be drawn to the failure of the District Officers to submit returns for the estates mentioned in paragraph 72 of the Report.

8. The revised Civil Suit Rules, the issue of which has been delayed owing to the necessity of making certain references to the Accountant-General on matters of account, will shortly be published.

9. The Lieutenant-Governor regrets to observe that in almost every section of the work of the Legal Remembrancer's office there has been a distinct decline during the past year.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Superintendent and Remembrancer of Legal Affairs and to the Solicitor to Government for information.

Ordered also that a copy of this Resolution be forwarded to the Board of Revenue and to the Revenue Department of this Government for information.

Ordered also that a copy of the Report and of the Resolution be submitted to the Government of India in the Home Department for information.

Ordered also that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Chief Secretary to the Govt. of Bengal.

RESOLUTION ON THE FINAL REPORT OF THE SETTLEMENT OF THE PALAMAU GOVERNMENT ESTATE.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 20th July 1899.

RESOLUTION—No. 2423.

READ—

The Final Report on the settlement of the Palamau Government Estate in the district of Palamau.

Read also—

Letters No. 288A., dated the 30th March 1899, from the Board of Revenue, No. 329S., dated the 21st February 1899, from the Director of Land Records, and No. 736L.R., dated the 16th November 1898, from the Commissioner of the Chota Nagpur Division, reviewing the Settlement Officer's Final Report.

Letter No. 569A., dated the 15th June 1899, from the Board of Revenue, on the subject of the grant of pattas to the raiyats.

THE new settlement of the Palamau Government estate began to take effect from September 1896, but the report of the Settlement Officer, which bears date the 24th October 1897, reached Government on the 7th April 1899. It appears that the correction of the proofs was much delayed owing to the want of time on the part of the officer engaged on the work, so that the final copies were not issued until August 1898. Considerable delay also occurred in the submission of the remarks of the Divisional Commissioner. The Lieutenant-Governor, agreeing with the Board, is unable to regard the explanation offered as wholly satisfactory.

Notwithstanding certain inaccuracies noticed by the Commissioner of the Division, the Report with its appendices contains much interesting information relating to the physical features of the country, its agriculture, the habits and customs of the people, and other matters. But the accounts given in it of the traverse and cadastral survey, the preparation of the records, and the determination of the rates of rent, are meagre, and much too little has been said of the valuable work done by the Deputy Commissioner, Mr. W. R. Bright, who fully discussed every important question which came before Government in connection with the settlement, and by whom the proceedings were organised from the beginning, and practically the whole of the survey and record-writing and some part of the attestation supervised.

2. The Government estate, the settlement of which forms the subject of the present report, lies in pargana Palamau, part of the district of the same name. This tract, a hilly and wild region, was conquered from its Chero rulers in 1773 A.D. After several successive settlements made with the descendants of the old Rajas, the estate was purchased by Government in 1812 at an auction sale for arrears of revenue. In 1816 it was granted to the Raja of Deo, in the district of Gaya, as a reward for loyal services rendered, but was resumed in 1818 in consequence of oppression on the part of the Raj agents, a remission of Rs. 3,000 a year from the revenue of his Bihar estates being allowed to the Raja by way of compensation.

3. The native rulers of Palamau had alienated a large part of the pargana as *jagirs* and other tenures granted at quit-rents, subject to a right of re-entry

in default of heirs male. Government on acquiring the rights of the old Rajas did not resume these tenures. After a searching enquiry made in 1893-94, they have been recognised as estates, permanent, heritable, and transferable: and the right of Government to resume on failure of male heirs has been abandoned once for all. The villages not so given away, known as *khalsa* or personal villages, constitute the Government estate, which has been settled raiyatwari from time to time, with thikadars to collect the rents from the raiyats.

4. The last regular settlement was commenced in 1864 and completed in 1872. The total number of villages settled was 401 with a total area of 273,635·81 acres (or 427·55 square miles), out of which 30 villages were subsequently included in the Palamau Reserved Forests, while 12 were added to the roll by resumption or jungle-clearing. The terms of settlement of the several villages were so fixed as to expire simultaneously on the 31st March 1894; but, when the resettlement operations were in progress the existing settlement was extended to the 31st March 1896 in order to admit of the completion of the proceedings.

5. Proposals for a resettlement of the estate were submitted to Government in September 1892, but the survey was not commenced until July 1893. The traverse survey was practically completed in the survey year 1893-94. Cadastral survey was commenced in November 1893, but, owing in great part to the slowness of the local *Kol* amins, was protracted till the end of the survey year 1894-95. In August 1895 Government decided that, in order to set back encroachments made by jagirdars or other tenure-holders and to protect the Government estate from further encroachments, the external boundaries of all the *khalsa* villages should be surveyed and demarcated in accordance with the revenue survey of 1860, except where this had already been done in the course of the survey of the cultivated blocks. This work was commenced on the 10th November 1895 and completed on the 12th June 1896. The initial record-writing was done by the survey amins under the supervision of Babu Rameshwar Prashad; and this officer also did some amount of attestation under the guidance of the Deputy Commissioner, Mr. Bright, who had drawn up detailed rules for both *khanapuri* (initial record-writing) and attestation. The Settlement Officer, Mr. D. H. E. Sunder, joined on the 17th November 1894. The attestation work was completed in the survey year 1894-95, except for one village, which was dealt with in the following year. Assessments were completed and announced to the raiyats by the end of April 1896. *Jamabandis* or rent-rolls were published in August 1896 in accordance with the provisions of Act VIII (B.C.) of 1879, and extracts showing the details of the lands in each holding and the rent payable were distributed to the raiyats. The submission of the final report was delayed till October 1897, in consequence mainly of the deputation of the Settlement Officer to famine—relief.

By a notification of the 17th July 1894, all waste lands the property of Government in the *khalsa* villages, with the exception of lands used by the villagers for cultivation or habitation, had been declared "Protected Forests." Accordingly the Settlement Officer was required to mark off, in consultation with the local Forest officers, the village areas in blocks of a convenient shape, adding to the cultivated lands such quantity of waste land as would be sufficient for the needs of the villagers. The blocks of waste land left out of these village areas, if of suitable size, were to form Protected Forests. It seems, however, that the Settlement Officer failed to grasp the intention of Government, and his final report contains no mention of what he did in this matter. After the close of the settlement operations, this work was entrusted to the Sub-Deputy Collector, Babu Rameswar Prashad, in charge of the Government Estate, who has completed it, and his report on the proceedings is being separately considered by Government.

6. The Palamau Government estate as now settled comprises 399 villages. The total area traversed, including jungle and waste, is 272,000 acres, or 425·23 square miles, of which 187,520 acres, or 293·93 square miles, from the occupied area, and have been cadastrally surveyed.

The aggregate area, cultivated and culturable, including homestead, held by tenants is 65,546 acres, of which 56,278·51 acres are reported to have been found actually under cultivation. The Settlement Officer calculates the increase in cultivation since the last settlement at 221 per cent., taking the total cultivated area at that time to have been 17,511·44 acres. The cultivated area shown in Table III appended to Mr. L. R. Forbes' Report of the last settlement is, however, 43,426·25 acres, and on this basis the increase in cultivation amounts to only 29·6 per cent. The discrepancy has been noticed by the Commissioner of the Division, and a copy of the explanation called for by him should be submitted to Government.

Of the total cultivated area 10,428·20 acres are double-cropped. Rice occupies 23·84 per cent. of the cropped area, while 54·39 per cent. is covered by other food-crops. The total irrigated area reported by the Settlement Officer is 8,558·58 acres. *Ahars*, or reservoirs made by throwing embankments across drainage hollows or across the natural slope of fields, constitute the principal source of irrigation. Mr. Sunder has recommended the construction or improvement of certain *ahars*. The matter is receiving the attention of the Board and the local officers, and the Lieutenant-Governor will be glad to have a report on the action taken to give effect to the Settlement Officer's recommendations.

7. A great part of the population of Palamau consists of aboriginal tribes who were not accustomed to the ordinary system of assessing each bigha of land at a certain rate of rent, known in Palamau as the *uttakar* system, which was, therefore, at the last settlement adopted only in the case of villages where cultivation was more permanent and the raiyats were of the more advanced castes. In the more jungly villages lying chiefly to the south, the system adopted was the *pariadari* system, which was the only one the aboriginal raiyats understood, and under which certain of the village lands, generally the lowlands fit for paddy, were divided into a number of *parias* or shares, each of which carried with it the right to cultivate a certain extent of *bhita* or upland free of rent. The *parias* were classified as first, second and third class, according to the soil contained in each, and a rent was fixed for the whole area according to the class in which the *paria* was placed.

For the new settlement it was at first decided that the *uttakar* system should be introduced wherever possible, it being left to the discretion of the Settlement Officer to continue the crude *pariadari* system where he failed to induce the raiyats to accept the other method. Subsequently, in the course of his proceedings, the Settlement Officer found that the general development of the country had been such that there was no need to settle the estate partly on the *uttakar* and partly on the *pariadari* system; and in accordance with a recommendation made in his Rate Report, Government decided that throughout the estate the settlement should be made on the *uttakar* system.

8. After considerable discussion it was finally decided that for purposes of assessment the two broad divisions of cultivated land, *dhankhet* and *bhita*, should each be divided into three classes. First-class *dhankhet* is the lowest land on which most water remains, and which is therefore best suited to winter rice; the other two classes possess the same character but in lower degrees. First-class *bhita* is the land on which *bhadoi* or autumn paddy, wheat, barley, maize and sugar-cane are grown; lands yielding *marua* (*eleusine corocana*), linseed and gram have been classed as second-class *bhita*, and those producing til or jinjilli (*sesamum indicum*), cotton and pulses have been classed as third-class *bhita*. This classification is the same as that current in the adjoining districts of Hazaribagh and Lohardaga; but the Settlement Officer observes that while it appears to be understood by the more intelligent raiyats of the higher castes, the bulk of the people cannot grasp the distinction between the several classes.

Whilst the above classification of soils was retained unaltered from the last settlement, the similar triple division of villages was abandoned, and in its place a more complicated division, based on a variety of factors, was introduced.

In fixing the rates, Government was influenced by the consideration that Palamau is still in a backward condition, partly owing to the absence of railways, and the vicissitudes of the rainfall. Therefore it was decided for the most part to keep to the rates of the previous settlement, and in some cases those rates were even reduced.

9. The following table shows the class of tenants, the areas held by them and the rents assessed:—

Class of tenants.		Number of tenancies.	Aggregate cultivated and culturable area held by each class.	Average area of cultivated and culturable lands per holding.	Rent— Actually paid by tenants as found at attestation.	Rent— According to settlement.	Average rent per acre as now settled.	Remarks.

Non-occupancy raiyats.	Resident ...	3,593	10,642·22	2·97	8,098 10 5	9,019 9 0	0 13 6	
	Non-resident ...	1,883	6,373·49	3·38	5,708 8 5	6,545 3 0	1 0 5	
Rent-free holders.	A. Service tenures	222	385·15	1·73	.....	.....	.....	
	B. Chaukidari and Goraiti	19	28·63	1·50	.....	.....	.....	
	C. Others (Khairat, &c.)	51	116·40	2·28	.....	.....	.....	
	Total ...	13,244	65,546·03	.....	57,693 2 1	74,432 10 0	.....	
Shikmi or under-raiyats		2,519	2,977·24	1·18	5,966 14 6	Not settled.	.....	

The classification of raiyats into settled, occupancy and non-occupancy raiyats has been made in accordance with the principles of the Tenancy Act, although that Act is not in force in the Chota Nagpur Division, and although occupancy rights are unknown in the *jagirdari* villages. The large percentage of non-occupancy raiyats shown above is due to the unstable disposition of the people. Besides the concession of occupancy rights, all the raiyats, whether rent-paying or not, have for the first time been given *mahua* trees free of rent at the rate of two trees per raiyat in the northern and four in the southern villages. The flower of these trees, dried and preserved, forms a a valuable article of food for the lower classes. The resident raiyats have also been allowed to hold their homestead lands rent-free, the total area of land thus left unassessed being 991·51 acres, or an average of 0·19 acre per raiyat. Of the rent-free holdings, the service tenures, which are resumable, are held on the distinct understanding that they will be retained in their tenures only so long as the raiyats are satisfied with them. The Lieutenant-Governor agrees with the Commissioner and the Board in thinking that the lands comprised in the chaukidari tenures, amounting only to 29 acres, need not be resumed, and that the service tenures referred to in paragraph 97 of the final report need not be specially sanctioned since they are all resumable save those called *khairat*, which appear to be petty maintenance grants given by the former Chero Rajas to *jakirs*, Brahmans and others.

10. The total raiyati rental fixed at the last settlement was Rs. 40,843. This by various means the thikadars or farmers increased to Rs. 57,693, which was the rent actually paid as ascertained at attestation. The new rental being Rs. 74,433, the increase on the attested rental amounts to 29 per cent. The Lieutenant-Governor agrees with the Board in thinking that (paragraph 5, Board's report,) the incidence of the rent per acre, viz. Re. 1-2-3, is moderate. The increase in the rental is due chiefly to extension of cultivation and has been accepted by the tenants.

The cost incurred was as follows:—

	Total cost.	Cost per acre of the area cadastrally surveyed.	Cost per acre of the total area surveyed.
	Rs.	Rs. A. P.	Rs. A. P.
Survey	79,165	0 6 9	0 4 8
Settlement	40,387	0 3 5	0 2 4
Total ...	1,19,552	0 10 2	0 7 0

The actual expenditure incurred, and the time occupied were, however, more than double those originally contemplated, this being due to the fact that the original estimates were based on the assumption that only 110 square miles would have to be cadastrally surveyed, whereas in reality the area was 294 square miles.

11. To the rental of the estate should be added the revenue derived from the following species of trees:—

(1) *Mahua trees.*—Those in excess of the number allowed to the raiyats free of rent have been settled for the period of the settlement (15 years at 4 annas per tree in the northern villages and at 2 annas in the southern villages.

(2) *Asan trees*, used for rearing silk cocoons, sold by auction annually by the Deputy Commissioner either for the whole estate or for groups of villages.

(3) *Khair trees* used for the manufacture of *kath* or catechu and in growing lac. The Deputy Commissioner has been left free to settle these trees from year to year to the best advantage. The manufacture of *kath* involves the destruction of the trees. It was therefore decided in 1896 that in villages where *khair* trees are numerous some of them might be allowed to be felled, but that in others it might not be advisable to allow such destruction, specially where the trees are used for lac cultivation. *Khair* trees are used also for house posts and ploughs, and for making charcoal, and the Settlement Officer recommends that the destruction of these trees in the Government estate should be stopped altogether. The Deputy Commissioner does not agree in this recommendation. The Conservator of Forests will be requested to have the trees in question inspected, and to submit a report as to whether, looking to the rules relating to these trees in the reserved and protected forests, it would be inadvisable to give effect to the decision already arrived at by Government.

(4) *Palas and Kusum trees* used in growing lac. It was decided in 1896 that such of the trees as had already been entered in the raiyats' names in the khatians as being in their possession should be settled with them separately at the rates noted on the margin for one year, on the distinct understanding that they would be re-settled with them or not as Government might determine on receipt of fuller information. On this question and that of other lac-bearing trees, the Lieutenant-Governor awaits the report called for in paragraph 3 (*e*) of Government Order No. 3292L.R., dated the 17th August 1896.

In the northern villages—
Palas ... 2 annas a tree.
Kusum ... 6 „ „
In the southern villages—
Palas ... 1 anna a tree.
Kusum ... 4 annas „

The excess *mahua* trees have been settled for a period of 15 years with the raiyats for Rs. 3,270 per annum; the *palas* and *kusum* trees were settled for 1896-97 at Rs. 10,087, and the revenue obtained from *kath* in that year was Rs. 265. No revenue was obtained from silk cocoons in 1896-97.

12. The term of settlement of the land revenue has been fixed at 15 years, commencing from the beginning of the Fasli year in September 1896. The kists fixed at the last settlement were 4 annas, due on the 28th October, 8 annas on the 28th January, and 4 annas on the 28th March, paid respectively from the sale-proceeds of the *bhadoi* crops, of the paddy and other *kharif* crops, and of the *rabi* crops. Rents for *mahua* and lac-bearing trees were payable on the 28th March along with the last kist of land revenue. These kists have been continued, but it appears that a large balance generally remains uncollected at

the end of the financial year, owing presumably to the *rabi* crops not being ready for the market till the end of April, and *mahua* and lac till May. The Lieutenant-Governor therefore accepts the recommendation of the Board and the local officers that the 4-anna instalment of land revenue paid from the sale-proceeds of *rabi* crops should be fixed for the 28th of April, and that rents for *mahua* and lac-bearing trees should be made payable in one instalment on the 28th of May. In view of the circumstances referred to a report is desired as to whether there is any need to make a similar change in the dates at present prescribed for the collection of land revenue in the district of Palamau.

13. The rents were formerly collected through thikadars or farmers who were paid a commission of 10 to 15 per cent. on the actual collections made by them, and were allowed certain privileges which were a source of considerable gain. In some villages, the thikadar also held the *manjhas*, or *nijjote* lands, at village rates; but as he was entitled to hold these lands only so long as he might manage the village properly and treat the raiyats well, he was precluded from acquiring any right of occupancy over them. It came to light that the thikadars generally had made no improvements in the estate, and had to a great extent violated the conditions of their leases. The system was therefore abolished and khas management introduced on the 1st April 1896; but the local officers have permission to settle with such individual thikadars as may have special claims to consideration on account of long ancestral connection with the village or of extensive improvements effected by them or by their predecessors.

14. No *pattas* have yet been issued, and the Settlement Officer is apparently not in favour of the grant of formal leases, seeing that the raiyats are content with the extracts from the *jamabandi* already given to them. But under section 5 of the Chota Nagpur Landlord and Tenant Procedure Act I (B.C.) of 1879, every raiyat is entitled on demand to receive a *patta* showing (1) the quantity and boundaries of the land, (2) the amount of annual rent, (3) the instalments in which it is to be paid, and (4) any special conditions of the lease, and the *fehrists* distributed do not appear to contain anything as to items (3) and (4). The Lieutenant-Governor therefore accepts the recommendation of the Board and the Commissioner of the Division, that a *patta* should be given to every raiyat who may demand it, and that should any village be hereafter let to a thikadar, a *patta* should be given to each raiyat before possession is given to the farmer. He also approves the revised form of *patta* submitted with the Board's letter No. 569A., dated the 15th June 1899, subject to the following corrections, viz., the dates given in the preamble should be made to conform with the actual facts—the settlement having taken effect only from September 1896—and a column giving boundaries should be added to the statement at the end of the form, as the law requires this. If there is to be no general distribution of *pattas*, the Board are requested to consider what steps should be taken to make known to the raiyats the kists, and the special conditions of the lease, such as those on the restriction of transfers, the term of sub-leases, the supply of *rasad* and coolies, and the reservation of mineral rights and of the right to take up lands for public purposes, &c., which every raiyat ought to be aware of.

15. As to the question of the maintenance of the settlement records, Government awaits the Board's opinion on the special report which the Director of Land Records is to submit on the question. It will be obvious to them that this question requires very early attention and decision.

16. In paragraph 29 of his final report and in the appendices, the Settlement Officer has recommended the construction or improvement of certain roads. The attention of the District Road Committee should be drawn to these proposals.

17. As suggested in paragraph 375 of the Report, arrangements should be made for the Sub-Deputy Collector in charge of the estate and his tahsildars to annually inspect the permanent survey marks and submit a report thereon, and the Lieutenant-Governor agrees with the Board and the Commissioner that the improvement of the markets should be made out of allotments from the management grant.

18. The Lieutenant-Governor will await a report from the Commissioner of the Division showing what, if any, action it is proposed to take on the Settlement Officer's suggestions in Appendices XX and XXI to the final report as to the sale of skins of wild animals, the transfer of cubs, &c., to the Calcutta Zoological Gardens, and the preservation of certain species of birds. The report called for by the Commissioner concerning the manufacture and sale of country guns in Palamau should be submitted with his own remarks to the Judicial Department of this Government.

19. The Lieutenant-Governor's thanks are due to Mr. W. R. Bright for the excellent work done by him, as Deputy Commissioner, in organizing the proceedings and carrying them through the earlier and more difficult stages; to Mr. L. F. Berkeley, who as officer in charge of the survey did excellent work; and to the Settlement Officer Mr. Sunder, who by indefatigable industry, tact in dealing with the people, and mastery of detail, has carried out the settlement with marked success. The acknowledgments of Government are also due to Babu Rameswar Prashad for the good work done by him as Assistant Settlement Officer.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette* and that a copy of it be sent to the Board of Revenue and to the Conservator of Forests, Bengal.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secy. to the Govt. of Bengal.

RETURNS OF JOINT-STOCK COMPANIES FOR THE YEAR 1898-99.

REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT, 1893, IN CALCUTTA DURING THE YEAR 1898-99.

No. 3822M.—The 22nd July 1899.—The following report is published for general information.

F. A. SLACK,
Offg. Secy. to the Govt. of Bengal.

No. 527J., dated Calcutta, the 22nd June 1899.

From—W. R. BRIGHT, ESQ., C.S., Chairman of the Corporation of Calcutta,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit the following report under section 41 of Act I of 1893 (B.C.) of the Warehouses in Calcutta for the year ended 31st March 1899.

2. During the year under report the fees under section 10 of the aforesaid Act continue to be levied at $7\frac{1}{2}$ per cent. on the annual valuation of the Warehouses.

3. The following statement describes the result of applications for licenses:—

Applications.		Total.	Nature of applications.	No. sanctioned.	No. refused.	No. pending.
Pending since last year.	Received during the year.					
1	2	3	4	5	6	7
6	31	37	Wood, &c. ...	31	4	2
1	4	5	Jute	2	.....	3
7	35	42		33	4	5

4. During the year under review 40 licenses were issued for 1897-98 and 575 for 1898-99. The following is a statement of the aggregate amount of receipts during the year:—

	Rs.	A.
License fees for 1897-98	1,053	8
Ditto for 1898-99	24,925	0
Mutation fees and fines	249	0
Total ...	26,227	8

5. Of 593 licenses for Warehouses in 1897-98, 450 were renewed, 29 cancelled as vacant or unoccupied or not assessable under the Act, while the license fees of 24 remained unrealised at the close of the year.

6. The following statement shows the receipts and disbursements of the Warehouse Fund during the year 1898-99:—

Receipts.	Amount.	Total.	Disbursements.	Amount.	Total.
1	2	3	4	5	6
	Rs. A. P.	Rs. A. P.		Rs. A. P.	Rs. A. P.

WEATHER AND CROP REPORT.

For the week ending the 24th July 1899.

Burdwan.—Rainfall at Sadar 8·84, Kalna 8·79, Katwa 12·04, Raniganj 4·23. Weather cloudy and rainy. Transplantation of *aman* paddy going on briskly. No more rain is wanted at present. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa decreasing rapidly. Common rice selling as follows:—

	Srs.	
Sadar	17 to 20	per rupee.
Kalna	15 to 17	
Katwa	17	
Raniganj	16	

Birbhum.—Rainfall at Sadar 6·34, Rampur Hât 3·46. Weather rainy. Transplantation of paddy going on. Price of common rice at Sadar 18 seers and at Rampur Hât 17½ seers per rupee. Fodder sufficient. No cattle-disease.

Bankura.—Rainfall at Bankura 1·03, Vishnupur 5·43. Weather hot with occasional light showers. Transplantation going on. Fodder and water sufficient. No cattle-disease reported. Price of common rice at Bankura 17½ seers and at Vishnupur 17¼ seers per rupee.

Midnapore.—Rainfall at Sadar 3·60, Tamluk 5·79, Ghatal 5·79. Weather seasonable. Transplantation going on. Ghatal circuit embankment lands over-flooded. Cattle-disease reported from Salboni police-station. Common rice selling as follows:—

	Srs.	
Sadar	12 to 20	per rupee.
Tamluk	14¾	
Ghatal	14 to 18	

Hooghly.—Rainfall at Sadar 6·26, Serampore 8·22, Jahanabad 10·92. Excessive rainfall has caused injury to jute and *aus*. Transplantation of winter paddy going on. Cattle-disease in Hooghly and subdivisions. Common rice sells from 13 to 16 seers per rupee.

Howrah.—Rainfall at Sadar 5·89, Ulubaria 5·71. Weather cloudy with heavy showers. Transplantation of *aman* retarded and seedlings damaged in places. Fodder and water sufficient. Common rice sells from 12 to 15 seers per rupee.

24-Parganas.—Rainfall at Sadar 2·30, Barasat 8·00, Basirhat 5·27, Diamond Harbour 2·88. Weather cloudy and rainy. Excessive rain has injured the standing crops. The low lands are flooded and *aman* seedlings have been destroyed in many places, especially in Diamond Harbour, where the prospects of the winter rice crop are not favourable. Weeding and transplanting operations are at a standstill except at Basirhat, where transplantation of *aman* is reported to be going on. Cattle-disease reported only from Basirhat subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	13 to 15	per rupee.
Barasat	16	
Basirhat	18 13/16	
Diamond Harbour	15	

Nadia.—Rainfall at Sadar 8·71, Kushtia 9·77, Meherpur 8·96, Chuadanga 6·19, Ranaghat 7·20. Weather rainy and cloudy. Transplantation of *aman* commenced. Excessive rain damaging *aus* crop on low lands. Fodder and water sufficient. Price of common rice stationary.

Murshidabad.—Rainfall at Sadar 1·63, Kandi 4·58, Jangipur 3·51. Weather cloudy. Transplantation of *aman* still going on. State of *bhadoi* good. Jute, indigo, and mulberry doing well. The recent rain has done some injury to the paddy plants in Sadar subdivision. No cattle-disease reported. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Kandi	18¼	
Jangipur	18	

Jessore.—Rainfall at Sadar 8·36, Jhenida 9·24, Magura 7·40, Narail 6·61, Bangaon 5·57. Weather cloudy and rainy Weeding of paddy going on. Rain and insects damaging the paddy. Prospects of *aman* crop fair. Rivers are rising fast. No cattle-disease reported. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16 to 20	per rupee.
Jhenida	16	
Magura	17 to 19½	
Narail	18	
Bangaon	17 to 18	

Khulna.—Rainfall at Sadar 10·18, Bagirhat 4·85, Satkhira 11·13. Weather hot, cloudy, and rainy. Cultivation for and transplantation of *aman* going on. Fodder and water sufficient. Cattle-disease reported from Morelganj and Mollahat. Common rice sells as follows:—

	Srs.	
Sadar	19 to 23	per rupee.
Bagirhat	20	
Satkhira	15 and 20 (coarse *aus*).	

Rajshahi.—Rainfall at Sadar 1·27, Nator 4·82, Naugaon 4·31. Prospects of crops good. Cattle-disease reported from one village in Lalpur thana. Fodder and water available. Rice sells from 15 to 22 seers per rupee.

Dinajpur.—Average rainfall 5·07. Weather seasonable. *Haimanti* paddy being transplanted. Cattle-disease reported from two thanas and two outposts. Fodder and drinking-water plentiful. Rice 17 to 20 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 6·44, Alipur Duars 1·88. Weather seasonable. *Bhadoi* and jute thriving well. Transplantation of *haimanti* paddy going on. Fodder and water sufficient. Common rice sells from 10 to 13 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 7·83, Siliguri 3·61. Weather seasonable. *Hills*—*Haimanti* paddy and *bara marua* being transplanted; *bhutta*, *bhadoi*, and *chota marua* flourishing. *Terai*—*Haimanti* paddy being transplanted; jute, *bhadoi*, and sugarcane doing well. Prospects good. Coarse rice sells as follows:—

	Srs.	
Hills	10 to 12	per rupee.
Terai	16 to 18	

Bhutta sells at Darjeeling 24 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 1·33, Kurigram 1·00, Nilphamari 5·70. Weather rainy. Cutting of *aus* and jute going on. Prospects good. Fodder and water sufficient. Cattle-disease prevailing in some villages in thana Jaldhaka.

Bogra.—Average rainfall 2·99. Harvesting of *aus* and jute going on in places. Preparation of land for and transplantation of *aman* going on. Prospects good. Fodder and water sufficient. Common rice selling from 16 to 22 seers per rupee.

Pabna.—Rainfall at Sadar 6·89, Sirajganj 4·16. Weather cloudy and rainy. Lowland crops greatly damaged owing to excessive rainfall. Prospects otherwise good. Prices unchanged.

Dacca.—Rainfall at Sadar 4·59, Manikganj 2·88, Munshiganj 3·42, Narainganj 4·04. Weather seasonable. Prospects of crops fair. Insects are still destroying paddy and jute in Sadar and Munshiganj subdivisions. Fodder available. No cattle-disease. Price of rice stationary.

Mymensingh.—Rainfall at Sadar 3·64, Tangail 2·38, Kishorganj 1·13, Jamalpur 2·27, Netrokona 3·15. Weather dull and showery. Prospects of crops excellent. Condition of cattle good. Fodder and water-supply ample. Common rice sells at 20 seers per rupee.

Faridpur.—Rainfall at Sadar 5·14, Goalundo 5·97, Madaripur 2·60. Weather cool: very rainy and damp. *Aus* and jute being reaped. Prospects of all crops very good. Common rice sells at 19 seers per rupee.

Backergunge.—Rainfall at Sadar 10·41. Weather showery. Prospects of crops fair. Common rice sells from 13 to 21 seers per rupee.

Tippera.—Rainfall at Sadar 4·67, Brahmanbaria 1·18, Chaudpur 4·33. Weather stormy. Jute and *aus* paddy being cut. Some damage to paddy and jute reported from Chandpur subdivision. Average price of common rice 19 seers per rupee.

Noakhali.—Rainfall at Sadar 14·27, Feni 17·98. Prospects of standing crops good. No cattle-disease. Fodder sufficient. Price of rice 16 to 20 seers per rupee.

Chittagong.—Rainfall 6·17. Weather seasonable. Transplantation of *aus* over. Fields being prepared for *aman*. Prospects fair. Prices steady. Water and fodder sufficient.

Patna.—Rainfall at Sadar 6·37, Bikram 5·13, Barh 8·04, Hilsa 9·05, Dinapore 5·9, Bihar 5·74. Excessive and continuous rain has injured the *bhaddi* crops. The country is water-logged in places, and paddy seedlings have been slightly damaged. Condition of cattle good. Fodder and water for cattle sufficient. Common rice in Patna sells at 18 seers per rupee.

Gaya.—Rainfall at Sadar 8·32, Jahanabad 2·22, Aurangabad 3·64, Nawada 5·86. Paddy seedlings ready for transplantation. Sunshine urgently wanted for weeding *bhadoi* crops. Common rice selling at 15½ seers per rupee.

Shahabad.—Rainfall at Sadar 3·89, Buxar 1·18, Bhabua ·47, Sasaram 1·10. Transplantation of *marua* and paddy going on. Standing crops not doing well owing to continuous rain. Cattle-disease reported from seven villages in the Sasaram subdivision. Fodder and water abundant.

Saran.—Rainfall at Sadar 6·52, Siwan 6·75, Gopalganj 3·46. Weather cloudy and rainy. Weeding of *bhadoi* crops and transplantation of paddy going on. Rain excessive. Young crops suffering Cessation of rain generally wanted. Average price of common rice 15·3 seers and of *makai* 24·13 seers per rupee.

Champaran.—Rainfall at Motihari 1·91, Bettiah 3·17, Barharwa 5·46, Bagaha 1·39 Ramnagar 1·96. Prospects of paddy good. Transplantation still going on. *Makai* suffered much from excessive rain. Weeding virtually stopped. Sunshine much wanted. Price of common rice 13⅛ seers and of maize 22½ seers per rupee.

Muzaffarpur.—Rainfall at Sadar 3·22, Hajipur 9·37, Sitamarhi 1·68. *Bhadoi* crops being damaged by incessant rain. Sunshine urgently needed. Transplantation of rice going on where practicable. Prices are—Common rice 12 to 15 seers, wheat 16 to 18 seers, barley 23 to 25 seers, *makai* 22½ seers, gram 21 to 23 seers, and *rahar* 21 to 22 seers per rupee.

Darbhanga.—Rainfall at Sadar 2·42, Samastipur 3·45, Madhubani 1·37. Weather cloudy and rainy. *Bhadoi* crops damaged to some extent by excessive and continued rain. Cessation of rain is urgentiy needed to improve the *bhadoi* crops. Paddy being transplanted. Common rice selling at Sadar 13½ seers per rupee. Fodder and water sufficient.

Monghyr.—Rainfall at Monghyr 9·22, Begusarai 13·24, Jamui 13·12. Weather very rainy. *Bhadoi* crops considerably damaged owing to excessive rainfall. Paddy being transplanted. Weeding retarded. Indigo being cut. Common rice sells as follows :—

	Srs.	
Monghyr	13	per rupee.
Begusarai	12 to 14	
Jamui	15	

Bhagalpur.—Weather wet and cloudy. Rainfall at Sadar 9·44, Banka 11·71, Madhipura 5·03, Supaul 4·25. Prospects of *bhadoi* crops seriously damaged on account of heavy rain, especially in Banka. A break of sunny weather required much. Stray cases of cattle-disease reported. Common rice sells at Sadar 15 seers 2 chitaks per rupee.

Purnea.—Rainfall at Sadar 6·21, Kishanganj 3·06, Araria 7·79. Weather rainy. Standing crops doing fairly well. Early-sown *bhadoi* (*janera*) being harvested. Transplantation of *aghani* progressing. No cattle-disease. Fodder and water sufficient. Common rice sells at Sadar 14 seers and at Kishanganj and Araria 15 seers per rupee.

Malda.—Rainfall at Sadar 3·36, Gajol 2·33. Weather cloudy with heavy showers of rain almost every day. Weeding of *bhadoi* paddy and jute continues. Some damage has been caused to the former by the sudden rise of the Ganges in thanas Kahammek and Manikchak. Winter rice being transplanted. Coarse rice selling at 18 seers per rupee. Fodder ample.

Sonthal Parganas.—General rain. Indian-corn suffering from excessive moisture. Paddy flourishing. Some cattle-disease in Rajmahal and Jamtara subdivisions. Fodder sufficient.

Cuttack.—Rainfall at Sadar 1·33, Jajpur 2·14, Kendrapara 2·17, Banki ·87, False Point 1·19. Weather seasonable. *Sarad*, jute, and sugarcane growing. *Beali* in ear. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows :—

	S.	ch.	
Cuttack	17	1	per rupee.
Jajpur	17	1	
Kendrapara	19	11	
Banki	16	13	

Balasore.—Rainfall at Sadar ·33. Sugarcane thriving. Reploughing of *sarad* going on. Rice sells from 16 to 24 seers per rupee in the interior, and 16 seers at Balasore and Bhadrak. Fodder and water sufficient.

Angul.—Rainfall at Sadar ·26, Bisipara 2·67. Weather cloudy with occasional drizzling. Puddling of winter rice retarded for want of sufficient rain. *Bhadoi* and sugarcane doing well. Rice sells at 24 seers per rupee at Angul and 16½ seers at Khondmals.

Puri.—Rainfall at Sadar ·33, Khurda ·51. Puddling of *sarad* has commenced in some places; elsewhere it is delayed for want of sufficient rain. Condition of *bâli*, *mandia*, and sugarcane good. Fodder and water sufficient. Cattle-disease still continues in some parts. Price of common rice stationary.

Hazaribagh.—Rainfall at Sadar 3·53, Giridih 4·00. Weather seasonable. *Bhadoi* crops injured by excessive rain in some thanas. Transplantation going on. Common rice sells from 14 to 18 seers per rupee.

Ranchi.—Transplantation of winter rice commenced. Prospects good. Rice sells at Ranchi 15 seers per rupee and in the interior from 16 to 21 seers per rupee. Health of cattle good. Fodder and water plentiful.

Palamau.—Rainfall 2·01. Weather seasonable. Transplantation of paddy commenced. *Makai*, *urid*, and *barai* injured somewhat by excessive rain. Sugarcane doing well. Rice sells at 16 seers per rupee.

Manbhum.—Rainfall at Sadar 4·78, Gobindpur 4·57. Weather seasonable. Prospects of crops generally good. Cattle-disease reported from thanas Topchanchi and Tundi. Fodder and water sufficient. Average price of common rice at Sadar 18 seers and Gobindpur 16 seers per rupee. Supply sufficient.

Singbhum.—Rainfall 1·85. Prospects of crops good. Transplanting in progress. Rice sells from 16 to 20 seers per rupee.

General Summary.—There has been general and heavy rain except in Orissa, where more is wanted. The transplanting of winter rice is generally in progress, but a break in the weather would be beneficial, especially for the low lands, and in some places seedlings have been damaged. The continuous heavy rain has done injury to the young autumn crops throughout the Patna Division and in parts of Bhagalpur, Chota Nagpur, and South-West Bengal. The cutting of jute and early rice has begun in places in North and East Bengal. Sugarcane is doing well. Cattle-disease is reported from a few districts. Fodder is sufficient. Prices of common rice are reported to have slightly risen in a few districts, but are on the whole stationary.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

	Inches.
The mean pressure of the seven days	29·544
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·509
	Hours.
The total number of hours of bright sunshine	3·9
The maximum possible number of hours of sunshine	93·1
	°
The mean temperature of the seven days	82·4
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·4
The extreme variation of temperature	12·4
The maximum temperature	88·6
	Miles.
The highest velocity of the wind in one hour	13
	%
The mean relative humidity	90
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	86
	Inches.
The total fall of rain from 16th to 22nd July 1899	5·25
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·69
The total fall from 1st January to 22nd July 1899	49·37
The average fall of the corresponding period for 24 years, Surveyor-General's Office	30·11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers.

(a) The increase is due to movements of pilgrims and marriage parties, chiefly from stations in A. and B. districts.
(b) Deducted Rs. 32,864, being the estimated amount of rebate on coal for the period.
(b) The decrease is chiefly in grain and seed traffic from stations in B. and C. districts.
(c) Payments on account of mileage and demurrage being more than the receipts, nothing is included.

TARKESSUR BRANCH RAILWAY.

Approximate Return of Traffic for the first 8 days of July 1899 on 22·23 miles open.

	Coaching Traffic.		Merchandise and Mineral Traffic.		Other earnings (estimated).	Total earnings.	Traffic Train-miles run.

WEATHER AND CROP REPORT.

For the week ending the 31st July 1899.

Burdwan.—Rainfall at Sadar 5·94, Kalna 2·95, Katwa 2·03, Raniganj 4·32. Weather cloudy. Transplantation of *aman* paddy continues. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa worse than in previous week. Common rice selling as follows:—

	Srs.	
Sadar	16	per rupee.
Kalna	15	
Katwa	16½	
Raniganj	16	

Birbhum.—Rainfall at Sadar 3·70, Rampur Hât 2·49. Weather seasonable. Transplantation of paddy seedlings in progress. Price of common rice at Sadar 18 seers and at Rampur Hât 17½ seers per rupee. Fodder sufficient. No cattle-disease.

Bankura.—Rainfall at Bankura 3·11, Vishnupur 1·56. Weather hot with occasional showers. Transplantation not yet finished. Fodder and water sufficient. Sporadic cases of cow-pox reported. Rice selling at Bankura 17½ seers and at Vishnupur 17¼ seers per rupee.

Midnapore.—Rainfall at Sadar 4·04, Contai 1·60, Tamluk 3·58, Ghatal 6·30. The whole of the Contai subdivision overflooded by excessive rain; fields still under water; water passing slowly; agricultural operations resumed on *jalpai* lands and high lands; prospects

not favourable in other subdivisions. Prospects of sugarcane, jute and flax good. Cattle-disease reported from Salboni police-station. Locusts appeared in some places in Pingla outpost. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Contai	16½	
Tamluk	12	
Ghatal	16	

Hooghly.—Rainfall at Sadar 2·56, Serampore 3·24, Jahanabad 3·58. Some damage to jute and *aus* paddy caused by excessive rain. Transplantation of *aman* paddy continues on high lands. Common rice sells at 14 seers 5 chitaks per rupee.

Howrah.—Rainfall at Sadar 1·95, Ulubaria 2·60. Weather hot and cloudy with occasional showers. Transplantation of *aman* going on slowly on account of heavy rainfall. In places in Ulubaria, where seedlings were damaged, attempts are being made to grow new seedlings. Prospects fair, but depend a good deal on setting a break now. Fodder and water sufficient. Common rice sells at 14 seers per rupee.

24-Parganas.—Rainfall at Sadar 1·72, Barasat 3·31, Basirhat 2·17, Diamond Harbour 2·37. Weather cloudy with occasional rain. Transplantation of *aman* much retarded by heavy rain, especially in the Diamond Harbour subdivision, where also great quantity of seedlings have been destroyed. Cattle-pox reported from Baduria in the Basirhat subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	13 to 16	per rupee.
Barasat	15½	
Basirhat	18	
Diamond Harbour	14½	

Nadia.—Rainfall at Sadar 5·54, Kushtia 3·41, Meherpur 3·10, Chuadanga 5·23, Ranaghat 4·05. Weather cloudy and rainy. Transplantation of *aman* continues. River rising fast. *Aus* crop on low lands being damaged by excessive rain. Fodder and water sufficient. Price of common rice stationary.

Murshidabad.—Rainfall at Sadar 2·26, Jangipur 4·59. Weather hot *Bhadoi* is being reaped in some places. Indigo, mulberry, and sugarcane not doing well on account of excessive rain. General prospects of paddy good. Rain has done some injury to the crops. No cattle-disease reported. Common rice sells at Sadar 15 seers per rupee.

Jessore.—Rainfall at Sadar 4·76, Jhenida 2·58, Magura 3·76, Narail 4·88, Bangaon 5·94. Weather cloudy and rainy. Weeding of paddy nearly completed. Insects and rain damaging the paddy. Prospects of crop not good. Rivers are rising fast. Cattle-disease reported from Bangaon subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Jhenida	16	
Magura	17	
Narail	16	
Bangaon	17	

Khulna.—Rainfall at Sadar 3·51, Bagirhat 4·17, Satkhira 1·96. Weather hot and cloudy, with occasional rain. Cultivation for and transplanting of *aman* going on. Insects damaging paddy in the Sadar and Bagirhat subdivisions. Fodder and water sufficient. Cattle-disease reported from Bagirhat and Rampal. Common rice selling as follows:—

	Srs.	
Sadar	20	per rupee.
Bagirhat	17	
Satkhira	17½	

Rajshahi.—Rainfall at Sadar 4·61, Nator 6·43, Naugaon 8·7. Heavy rain and flood causing damage to *aus* and jute crops on low lands. Cattle-pox reported from two villages in thana Lalpur. Fodder and water ample. Common rice selling at 16 seers 15 chitaks per rupee.

Dinajpur.—Average rainfall 9·17. Weather seasonable. *Haimanti* paddy being transplanted. Steeping of jute commenced. Cattle-disease reported from five thanas. Fodder and drinking-water plentiful. Common rice 17 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 4·50, Alipur Duars 10·65. Weather hot and cloudy. Jute and *bhadoi* paddy are being cut in some places. Transplantation of *haimanti* paddy still going on. Fodder and water ample. Common rice sells at 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 16·80, Kalimpong 11·79, Siliguri 8·93. Weather seasonable. *Hills—Haimanti* paddy and *bara marua* being transplanted; *bhutta, bhadoi* paddy and *chota marua* progressing and promise well. *Terai—Jamira* paddy being reaped; *haimanti* paddy being transplanted; *bhadoi*, jute, and sugarcane doing well. Coarse rice sells as follows :—

	Srs.	
Hills	11	per rupee.
Terai	17	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 4·77, Kurigram 5·19, Nilphamari 5·54, Gaibanda 7·23. Weather hot and rainy. Transplantation of winter rice and cutting of jute going on. Prospects good. Common rice selling at 17½ seers per rupee. Fodder and water sufficient. Cattle-disease prevailing in some villages in thana Jaldhaka.

Bogra.—Average rainfall 9·56. Cutting of *aus* and jute and transplanting of *aman* going on. Prospects good. Fodder and water sufficient. Common rice selling at 18 seers per rupee.

Pabna.—Rainfall at Sadar 3·77, Sirajganj 5·00. Weather rainy. Excessive rainfall has done some damage to the lowland paddy; otherwise prospects good. *Aus* being harvested. Price of common rice 16 seers 3 chitaks per rupee.

Dacca.—Rainfall at Sadar 4·72, Manikganj 4·35, Munshiganj 3·30, Narainganj 3·33. Weather seasonable. Prospects of crops fair. No cattle-disease. Fodder available. Common rice 18 seers per rupee.

Mymensingh.—Rainfall at Sadar 9·88, Kishorganj 8·68, Tangail 1·28, Netrokona 9·99, Jamalpur 12·04. Weather rainy. Prospects of crops good. Condition of cattle good. Fodder and water-supply ample. Common rice sells as follows:—

	Srs.	
Sadar	20	per rupee.
Kishorganj	20	
Netrokona	24½	
Tangail	17¾	
Jamalpur	16	

Faridpur.—Rainfall at Sadar 5·45, Goalundo 4·38, Madaripur 4·82. Weather cool: very rainy and damp. *Aus* being reaped. Too much rain spoiling crops in the *beel* country. Prospects fair. Common rice sells at 18 seers a rupee.

Backergunge.—Rainfall at Sadar 3·03. Weather seasonable. Prospects of crops fair except for insects in places. Common rice sells at 17 seers per rupee.

Tippera.—Rainfall at Sadar 3·53, Brahmanbaria 3·35, Chandpur 7·44. Weather seasonable. Cutting of jute and *aus* paddy continues. *Aman* doing well. Slight damage to crops by insects reported in Chandpur. Average price of common rice 20 seers per rupee.

Noakhali.—Rainfall at Sadar 13·77, Feni 13·83. Prospects fair. Transplantation of *aman* going on. Cattle-disease (*damka*) reported from Chagalnaiya. Fodder and water sufficient. Price of common rice — *aus* 19 seers and *aman* 16½ seers per rupee.

Chittagong.—Rainfall 12·57. Weather seasonable. *Aus* being reaped and *aman* cultivated. Prospects good. Common rice 15 seers per rupee. Water and fodder sufficient.

Patna.—Rainfall at Sadar 2·14, Dinapore 3·07, Bikram 3·92, Hilsa 3·65, Barh 2·57, Bihar 3·68. The excessive rainfall during the month has caused much damage to the *bhadoi* crops. Almost all *diarah* lands have been flooded. No cattle-disease. Green fodder plentiful. Common rice in Patna sells at 16 seers per rupee.

Gaya.—Rainfall at Gaya 4·32, Jahanabad 2·59, Aurangabad 2·17, Nawada 1·27. Transplantation of paddy commenced. *Bhadoi* suffered much from incessant rain. Common rice selling at 14 seers per rupee.

Shahabad.—Rainfall at Sadar 5·39, Buxar 10·31, Bhabua 11·50, Sasaram 10·64. *Bhadoi* seriously damaged. Sugarcane has also suffered from continual rain. Paddy seedlings also slightly damaged in Buxar subdivision. Sunshine much wanted. Fodder and water abundant.

Saran.—Rainfall at Sadar 2·70, Siwan 5·00, Gopalganj 7·35. Weather rainy and cloudy. Excessive rain damaging the prospects of *bhadoi* crops. Transplantation of paddy going on. Average prices—common rice 14·5 seers and *makai* 21·4 seers, against 13·3 seers and 19·9 seers, normal rates, respectively.

Champaran.—Rainfall at Motihari 7·78, Bettiah 18·98, Barharwa 5·47, Bagaha 13·30. *Bhadoi* crops considerably damaged by excessive rainfall. Weeding commenced during latter part of week. Paddy transplantation progressing; prospects good.

Muzaffarpur.—Rainfall at Sadar 5·87, Hajipur 1·79, Sitamarhi 4·73. *Bhadoi* crops being damaged by continuous rain. Paddy being transplanted where practicable. Prices are—Common rice 12 seers, wheat 16 seers, barley 22½ seers, *makai* 20 seers, gram 22 seers, and *rahar* 22 seers per rupee.

Darbhanga.—Weather cloudy and rainy. Rainfall at Sadar 4·14, Samastipur 5·62, Madhubani 8·53. Some break in the rains since last two days. *Bhadoi* crops deteriorating for want of weeding, and they have been damaged by the heavy and continual rain. Cessation of rain is badly wanted. Common rice selling at Sadar 11 seers per rupee. Fodder and water sufficient.

Monghyr.—Rainfall at Monghyr 4·98, Begusarai 5·38, Jamui 10·55. Weather very rainy. Transplantation of *marua* and winter rice going on. *Bhadoi* crops seriously damaged by incessant rain. Cessation of rain urgently needed. Prices of food-grains slightly rising. Common rice sells as follows:—

	Srs.	ch.	
Monghyr	13	5	per rupee.
Begusarai	14	0	
Jamui	14	0	

Bhagalpur.—Weather wet and warm. Rainfall at Sadar 4·30, Banka 9·51, Madhipura 6·14, Supaul 7·82. Prospects of *bhadoi* crops not improved. Great damage reported from Banka. Fodder available. Prices rising.

Purnea.—Rainfall at Sadar 4·05, Kishanganj 8·83, Araria 9·52. Weather seasonable. Standing crops doing well. Harvesting of early-sown *bhadoi* going on, though much impeded by heavy downpour. Transplantation of *aghani* continues. No cattle-disease. Fodder and water sufficient. Common rice sells at Sadar, Kishanganj and Araria 15 seers per rupee.

Malda.—Rainfall at Sadar 6·13, Chanchal 7·90, Shibganj 6·12, Gajol 5·81. Weather cloudy and rainy. *Bhadoi* paddy coming into maturity. Winter rice being transplanted. Low-land *bhadoi* crops greatly damaged by inundation. Ordinary rice selling at 16 seers per rupee. Fodder sufficient.

Sonthal Parganas.—Weather showery. Paddy flourishing. Indian-corn suffering from excessive moisture. Some cattle-disease. Fodder sufficient. Average prices—common rice 15 seers and Indian-corn 21½ seers per rupee.

Cuttack.—Rainfall at Sadar ·63, Jajpur 1·03, Kendrapara ·39, Banki ·29, False Point ·45. Weather seasonable. *Sarad*, jute, and sugarcane growing. *Beali* in ear. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

	S.	ch.	
Cuttack	17	1	per rupee.
Jajpur	17	1	
Kendrapara	19	11	
Banki	17	15	

Balasore.—Rainfall at Sadar 2·93. Sugarcane thriving well. Weeding of *aus* paddy and reploughing of *sarad* paddy going on. Rice sells at 18 seers per rupee in the interior, and 16 seers at Balasore and Bhadrak. Fodder and water sufficient.

Angul.—Rainfall at Angul ·50, Khondmals ·66. More rain wanted in both subdivisions for timely puddling and transplantation of paddy, which have been retarded. Common rice sells at Angul 24 seers and Khondmals 13½ seers per rupee.

Puri.—Rainfall at Sadar ·88, Khurda 3·39. Rain badly wanted for puddling of *sarad* and growth of *beali*, especially in Sadar subdivision. Condition of *mandia* and sugarcane good. Fodder and water sufficient. Cattle-disease continues. Common rice sells as follows:—

	S.	ch.	
Puri	17	0	)
Khurda	17	1	> per rupee.
Interior of the district	18	2	)

Hazaribagh.—Rainfall at Sadar 5·28, Giridih 4·05. Weather seasonable. Transplantation in progress. Common rice sells at 14 seers per rupee.

Ranchi.—Rainfall ·73. Weather seasonable. Prospects of crops good. Transplanting in progress. Rice sells at Ranchi 15 seers per rupee and in the interior 18½ seers per rupee. Health of cattle good. Fodder and water plentiful.

Palamau.—Rainfall 1·36. Weather hot. Transplantation of paddy going on. *Makai* has suffered from rain. Other crops doing well. Rice sells at 16 seers per rupee.

Manbhum.—Rainfall at Sadar 1·65, Gobindpur ·74. Weather seasonable. Prospects of crops generally good. Cattle-disease reported from thanas Topchanchi and Tundi. Fodder and water sufficient. Average price of common rice at Sadar 18 seers 5 chitaks and at Gobindpur 16 seers per rupee. Supply sufficient.

Singbhum.—Rainfall ·59. Prospects good. More rain wanted. Common rice sells at 17 seers 11 chitaks per rupee.

General Summary.—The rainfall during the week was general, and in parts of Bengal Proper and Bihar excessive. In Orissa more rain is still required. The excessive rain has continued to cause considerable damage to the *bhadoi* crops in the Patna and Bhagalpur Divisions, and the early rice and jute in some parts of the Presidency and Burdwan Divisions have suffered. Prospects are good in the Dacca and Chittagong Divisions, and fair in the Rajshahi Division. Cattle-disease still exists in several districts. Fodder is everywhere sufficient. Prices of common rice are reported to have risen in a few districts.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

REVENUE DEPARTMENT,
The 1st August 1899.

The total fall from 1st January to 29th July 1899		50·82
The average fall of the corresponding period for 24 years, Surveyor-General's Office		33·41

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder; ≺, lightning.

RESOLUTION ON THE ANNUAL REPORT OF THE CIVIL VETERINARY DEPARTMENT, BENGAL, FOR THE YEAR ENDING 31st MARCH 1899.

REVENUE DEPARTMENT—AGRICULTURE.

Calcutta the 8th August 1899.

RESOLUTION No. 2630.

READ—

The Annual Report of the Civil Veterinary Department, Bengal, for the year ending 31st March 1899.

Letter No. 55T.A., dated the 19th June 1899, from the Director of the Department of Land Records and Agriculture, Bengal, submitting the above.

THE Annual Report of the Civil Veterinary Department, Bengal, for the year ending 31st March 1899, which was due on the 1st of June reached this Government 23 days after the date fixed for its submission, or two months earlier than was the case last year. The Lieutenant-Governor hopes that the Director of Land Records will find it possible to submit the report still more punctually in future. The report affords a clear and short account of

the important matters with which the Department has to deal; and the Statistical tables appended to it contain much valuable information in a convenient form.

2. *The Veterinary College.*—In the year under report the status of the Bengal Veterinary School was raised to that of a College, and the course of instruction was extended from two to three years. The institution has fairly earned this promotion by good work in the past; and the Lieutenant-Governor has every confidence that its future will justify the action of Government. Revised rules for the admission of the students, the regulation of their studies, and the admission of animals into the hospital attached to the college have, since the close of the year, been published under Government Notification No. 523T.—R., dated the 14th June 1899.

Though the number of students attending the college throughout the year under report was smaller than in previous years, the results of the annual examinations of the institution were most satisfactory. All the six students of the first-year class, and the 15 students of the second-year class, passed creditably and were promoted to the respective higher classes. At the prize distribution made by the Lieutenant-Governor at the college premises on the 25th March last, he had the pleasure of expressing his satisfaction at the excellence of the arrangements of the institution, the thoroughness of the instruction imparted to the students, and the rapid advance made by it within the short space of five years from the commencement of its existence.

3. *Stipends.*—Out of the 30 monthly stipends of Rs. 5 each annually allotted by Government, only four were awarded in class A, and 10 in class B of the college during the year under report. The remaining students were assisted, six by District Board Stipends, one by the Burdwan Raj Stipend, and one by the Shew Buksh Bagla Scholarship.

4. *The Managing Committee.*—The Managing Committee was strengthened by the addition of Mr. C. L. S. Russell, C.S., and Mr. Abdur Rahman, Khan Bahadur, and after the prize distribution, at which the Lieutenant-Governor commented on the small amount of interest shown in the college by Muhammadans, two other members, viz., the Hon'ble Nawab Syed Amir Hossein, C.I.E., and Maulvi Budruddin Haidar Khan Bahadur, were appointed. It is hoped that the addition of these gentlemen will induce the community to which they belong to turn their minds to a form of employment, which in other provinces has proved very attractive to them.

5. *The Veterinary Infirmary.*—There has been a large increase in the number of sick animals treated in the infirmary and in the income from fees for treatment and shoeing. There is still, however, much room for development, and the Lieutenant-Governor hopes that as further knowledge is gained of the advantages offered by the institution the public generally, and official bodies especially, will resort to it with increasing frequency and confidence.

6. *Veterinary Assistants.*—Of the 35 students who passed out of the institution as Veterinary Assistants from March 1896 to March 1898, 19 have obtained permanent appointments, 3 are in temporary employment, 10 have started private practice, 2 are studying medicine, and 1 only is out of employment present. It is clear from these figures that there is a considerable demand for veterinary assistants, which is likely to still further increase in the near future, and the students have the great encouragement of a practical certainty of immediate employment on completion of their curriculum.

7. *Veterinary Dispensaries.*—Altogether nine veterinary dispensaries were at work in this Province during the year under report. Those at Sitamarhi, Patna and Dumraon were established during 1897-98; and the remaining six at Gaya, Muzaffarpur, Cuttack, Balasore, Burdwan and Tippera were newly opened during the year. Preparations were also made for the opening of two more dispensaries at Dumka and Kanti, but these could not commence regular operations until after the close of the year. From the accounts given in the report of the working of these nine dispensaries, it appears that the Sitamarhi, Patna and Dumraon dispensaries were in good order, each of them showing a surplus of income over expenditure. The working of the Balasore and Cuttack dispensaries was also satisfactory, though their financial condition was not so sound as those of the three mentioned above. The Gaya and the

Muzaffarpur dispensaries were established too late in the year to make much progress. Considering that Burdwan was one of the few districts in Bengal which suffered very severely from the outbreak of cattle disease during the year, the amount of work done by the Veterinary Assistant, appointed by the District Board of that district, was very small. The arrangements of the Tippera dispensary are not satisfactory, and the attention of the District Board is invited to the matter.

In the letter with which this report was forwarded, the Director of Land Records emphasised the need these infant institutions are in, of the care of the Commissioners and District Magistrates. The Lieutenant-Governor fully agrees with him that the hearty help of those officers should be given, especially in the early years of the dispensaries.

8. *Outbreaks of contagious disease among cattle.*—Reports of the outbreaks of cattle disease in epidemic form were received from 29 districts during the year under report, but the services of Veterinary Assistants were required only in the districts noted on the margin. Their services clearly saved the peasantry much loss. The largest number of deaths was reported from Cuttack, where, out of 5,425 total deaths, 2,586 or 48 per cent. were from rinderpest alone. The disease, however, was most fatal in Chittagong where, out of 3,422 animals attacked with the disease, 3,253 or 95 per cent. are said to have died. Burdwan and Puri also suffered severely from the disease, and the latter from foot and mouth disease as well.

Burdwan.	Champaran.
Midnapore.	Shahabad.
24-Parganas.	Darbhanga.
Darjeeling.	Purnea.
Rangpur.	Monghyr.
Chittagong.	Puri
Saran.	Ranchi.
Palamau.	

During the year the Director of Land Records arranged with the Inspector-General of Police, that in order to give earlier intimation of the outbreak of cattle disease, the officers in charge of police-stations should send post-cards direct to the Superintendent, Civil Veterinary Department, Bengal. This was done for two or three months towards the end of the year and the arrangement was found to work well.

9. *Rinderpest experiments.*—Successful experiments were conducted during the year by Veterinary-Major Raymond, to demonstrate the value of serum injection as a preventive and a cure for rinderpest. Experiments were also conducted by him with rinderpest hides and hides of animals, which had died of malignant sorethroat, from which it appeared to be certain that no danger could arise from the exportation of such hides into foreign countries. The enquiries made in the previous year into the value of Köch's system of bile injection were also continued with favourable results.

10. *Operations under the Glanders and Farcy Act in North Bihar.*—The operations under the Glanders and Farcy Act, which were commenced in the three districts of Saran, Champaran and Muzaffarpur in the latter part of the year 1897-98, were continued throughout the year under report. The Superintendent, Civil Veterinary Department, has promised to submit a report when they are completed.

11. *Cattle-fairs, shows, &c.*—The Lieutenant-Governor observes that the Superintendent could not manage to visit personally more than two cattle-fairs in the Province, as compared with five in the previous year. This was due to his pressing duties in connection with the numerous scientific experiments carried on by him, and the high pressure at which both he and his college staff had to work throughout the year. Veterinary-Major Raymond recognises, however, the importance of this branch of his work, and will no doubt be able to devote more time to it in the present year.

12. *Horse and pony-breeding in Bengal.*—The enquiries which were instituted at the desire of Sir Alexander Mackenzie into the possibility of improving the breed of country ponies in Bengal, were conducted by Veterinary-Major Raymond throughout the year, and after its close he submitted to Government a report, in which he suggested that the operations should, in the first instance, be confined to the Bihar districts, Darjeeling and Sikkim, as being the most promising localities in the Province, and might then if desired be gradually extended to the districts of Lower Bengal, where the necessity for such operations is not so great at present. It has been decided to confine present experiments to two districts of Bihar.

13. *Cattle-breeding.*—Appendix XXIII to the report furnishes an interesting synopsis of the results of the attempts made during recent years to improve the breed of cattle in this Province. Though the results of the experiments have hitherto been generally successful, Veterinary-Major Raymond considers the methods which have been adopted to be of doubtful expediency. The Hissar bulls introduced into Bihar were not a success: and the number of really good bulls of the local breed in Bihar is limited. Hence, if their exportation to Bengal is persisted in, there is a danger of permanently injuring the stock. He, therefore, adheres to the opinion he has previously expressed that the best way to improve the breed of local cattle is to rear bulls for breeding purposes under the immediate supervision of the Bengal Civil Veterinary Department. The advisability of establishing farms where this could be done, at Pusa and at Sripur in the Hatwa Raj, is engaging the attention of Government.

14. *Financial and General.*—The receipts from fees and the Provincial share of the expenditure of the Civil Veterinary Department, Bengal, during the year 1898-99 were Rs. 6,046-12-9 and Rs. 37,011-6-10 respectively, as against Rs. 4,988 and Rs. 27,310-3-11 during 1897-98.

Veterinary-Major Raymond was on tour for a period of 119 days, during the year under report. The Government of India having declined to meet the expenditure on account of the entertainment of a Personal Assistant for the Superintendent to carry on a portion of his duties during his absence on tour from Calcutta, this Government has been compelled to abandon the proposal for the present, or till the Provincial finances admit of the requisite expenditure.

The Lieutenant-Governor's thanks are due to Veterinary-Major Raymond for the ability with which he has conducted the affairs of this Department during the year, and he congratulates him and his staff on the success which has attended them in developing the Veterinary College.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

Government of Bengal,

CALCUTTA;
The 7th August 1899.

A. H. C. MACCARTHY,

FIRST FORECAST OF THE SUGARCANE CROP IN BENGAL, 1899.

THE following is published for general information.

REVENUE DEPT., F. A. SLACK,
The 7th August 1899. *Offg. Secy. to the Govt. of Bengal.*

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

FIRST FORECAST OF THE SUGARCANE CROP IN BENGAL, 1899.

Explanatory.—The following preliminary forecast of the area and outturn of the sugarcane crop in Bengal is issued under the recent orders of Government directing that two forecasts of this crop should in future be submitted in the place of the note on the crop that has hitherto been incorporated in the final note on the *rabi* harvest. This is the first separate note on the sugarcane crop published by this Department.

Estimates of the sugar produced from other sources than cane will be included in the final forecast of sugarcane to be issued in December next, as the juice of the date palm, which is the only other source of sugar in Bengal, is usually extracted in the winter, and no reliable estimate of the outturn can at present be made.

2. *Character of the season.*—Frequent showers fell in the early and latter parts of January, and the total rainfall for the month was above the average in all Divisions, except Orissa, where it was only half the normal. Rain fell in scattered showers at the beginning of February in most parts of the Province, and after a short spell of fine weather, again fell in heavy showers towards the close of the month in the south-eastern districts. The total rainfall for the month was, however, much below the normal in all parts of the Province, except East Bengal. In March the rainfall was less than the normal in all parts, except North Bengal. In April more than the average rain fell in all districts, excepting North Bengal, where it was slightly in defect. The rainfall in May was, on the average, below the normal in North Bengal and in the Bhagalpur and Chota Nagpur Divisions, normal in the rest of Bihar, but much above the normal in Orissa and Lower Bengal. In June the rainfall was general, and largely above the normal in all parts of the Province, except Orissa, while the rainfall in July has also been unusually heavy. On the whole, the season has been favourable for the cultivation and growth of sugarcane, except in some of the districts of Lower Bengal, especially in Nadia, Khulna, Pabna, Bogra, and Noakhali, where the crop appears to have suffered from excessive rain. In Dacca the crop has been partially damaged by sugarcane disease.

3. *Area sown.*—In the note on the outturn of the *rabi* crops in Bengal, published in April last, the normal area under sugarcane in the Province was shown as 996,100 acres. The normal area has since been revised by some District Officers, in consequence of which the provincial total stands at 896,700 acres, showing a reduction of about 100,000 acres. Even this figure appears to be high, and the figures returned by some of the District Officers appear to represent maxima rather than normal areas.

The total area under sugarcane this year is estimated at 868,300 acres against 868,900 acres cultivated in 1898. These figures do not, however, illustrate the general extension of cultivation since last year, observable from a detailed examination of the district returns. This extension would have shown an increase of nearly 18,000 acres since 1898, had it not been counteracted by a reduction due to climatic causes alone in Nadia and Pabna, and to an unexplained drop of 6,900 acres in Manbhum. The figures for this district appear open to doubt.

4. *Outturn.*—From the statement appended to this note, it will be seen that an outturn above the normal is expected in 6 districts, while in 19 districts the outturn is estimated at the normal. In 7 other districts the estimate varies between 90 and 100 per cent., in 6 others between 80 and 90, and in the remaining 8 districts it falls below 80. Generally speaking, it would appear that the prospects of the sugarcane crop are good in the comparatively dry districts of Bihar, Orissa and Chota Nagpur, and indifferent in the damper districts of Lower Bengal.

According to the returns of the District Officers, the outturn of the sugarcane crop in Bengal should be estimated at 96 per cent. of a normal crop against 90 per cent. estimated in 1898; but as there appears to be a tendency on the part of some District Officers to underestimate the outturn, it may be safely anticipated that the sugarcane crop for the Province will, as far as can be at present foreseen, yield about a normal outturn in the current year.

D. L. Roy,
Asst. Director of the Dept. of Land Records and Agri., Bengal.

Countersigned.

P. C. Lyon,
Director of the Dept. of Land Records and Agri., Bengal.

Calcutta,
The 2nd August 1899.

Preliminary forecast of the Sugarcane crop of Bengal, 1899.

Division.	District.	Approximate normal area in acres.	Approximate area sown last year (1898) in acres.	Estimated area sown this year (1899) in acres.	Taking 100 to represent the normal outturn, how much represented outturn last year (1898)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1899)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
Burdwan ...	Burdwan	27,400	27,400	27,400	100	100	Owing to seasonable rainfall, a normal outturn is anticipated.	
	Birbhum	9,000	6,000	7,000	40	90	The outturn is expected to be better than that of last year, owing to favourable weather. Sugar is not produced from other sources in this district.	
	Bankura	15,000	17,000	17,500	87	100	It is too early to make an accurate estimate of the outturn of the sugarcane crop now. The outturn may, however, be estimated at 100 per cent.	The Collector states that the estimates of sugar produced from the date-palm will be submitted later on.
	Midnapore ...	20,400	18,300	18,700	72	97	Owing to seasonable rainfall, the area brought under cultivation this year has been greater than that of last year and from the growth of the plants generally a normal outturn may be expected, provided no accident occurs in the meantime.	The Collector estimates 800 acres as the area covered by sugar crop other than cane and this year's outturn as 83 per cent.
	Hooghly	14,500	12,900	13,300	86	82	On account of seasonable rainfall a larger area has been sown with this crop than in the previous year. Prospects as yet are fair, the Subdivisional Officer of Jahanabad, however, fears that the crop will be damaged by the present excessive rains. Information regarding sugar produced from other sources will be furnished in the final report.	

Division.	District.	Approximate normal area in acres.	Approximate area sown last year (1898) in acres.	Estimated area sown this year (1899) in acres.	Taking 100 to represent the normal outturn, how much represented outturn last year (1898)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1899)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
Presidency ...	24-Parganas ...	4,500	4,000	4,000	107	107	Owing to the favourable rainfall, the outturn is expected to be above the average. The decrease in the area sown, as compared with the normal, is ascribed to insufficient rainfall when cultivation commenced. Accurate estimates of sugar produced from the date-palm and other sources cannot be furnished now.	
	Nadia	14,000	14,000	10,500	80	75	The decrease in the area sown, as well as in the outturn, is due to the unfavourable state of the weather during the sowing season and to excessive rainfall. The estimate of sugar produced from the date-palm will follow.	
	Murshidabad ...	17,000	16,800	17,000	76	100	The increase in area and outturn is due to the seasonable rainfall and to a sufficient store of water being available for early irrigation. No sugar is produced from any other sources in this district, but molasses are manufactured in some places from date juice, but there is no regular cultivation or garden of date-trees.	
	Jessore	15,000	11,500	14,800	67	82	.....	The Collector estimates this year's area under sugar crop other than cane as 20,000 acres and the outturn as 100 per cent.
	Khulna	3,100	3,300	3,100	88	81	The crop has been slightly damaged by the rains of the last two months.	The Collector states that the estimates of sugar produced from other sources will follow.

Rajshahi	Rajshahi	7,700	8,000	7,700	83	95	The figure in column 3 has been raised from 7,000 acres to 7,700 acres owing to the addition of a new tract to this district. Sugar produced from the date-palm is estimated at 1,200 maunds.	
	Dinajpur	24,000	24,500	30,000	100	100	Sugar is not produced in this district from other sources than cane.	
	Jalpaiguri ...	3,100	3,200	3,300	80	80	No sugar is produced from other sources than cane.	
	Darjeeling ...	400	400	400	75	100	A normal outturn is expected on account of the seasonable rainfall.	
	Rangpur	24,100	22,500	22,500	88	100	.....	The figures for area have been revised since the submission of the last rabi forecast.
	Bogra	12,000	12,000	12,000	110	100	Excessive rainfall in the early part of the season prevented timely weeding.	
	Pabna	66,000	60,000	52,500	70	60	Last year the cultivators sustained a heavy loss in this crop owing to the high flood. They did not consequently sow this crop in the low lands this year, hence the decrease in area. The continual heavy rain in May and June marred the prospects of the outturn. There is no regular cultivation of the date-palm. It is grown in gardens, and is not worth separately reporting on. Palm sugar is not seen in this district.	
Dacca	Dacca ...	25,000	26,800	26,800	86	79	The sugarcane crop was partially damaged in the subdivision of Munshiganj by a disease (*Trichosphæria Sacchari*).	
	Mymensingh ...	35,600	33,600	33,600	98	97	.....	
	Faridpur ...	42,000	42,000	42,000	88	100	The rainfall of this year has been very favourable to the growth of this crop, so a full average outturn is expected.	
	Backergunge ...	20,000	20,000	20,000	95	100	The sugarcane crop is normal both in area and outturn. It is impossible to give any figure for the area covered by date-palms, as they are not grown here in regular orchards, but are generally scattered among other crops or orchards of other trees. The outturn from the date-palm is nominal.	

Division.	District.	Approximate normal area in acres.	Approximate area sown last year (1898) in acres.	Estimated area sown this year (1899) in acres.	Taking 100 to represent the normal outturn, how much represented out-turn last year (1898)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1899)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
Chittagong ...	Tippera ...	14,000	11,400	12,800	93	90		
	Noakhali ...	900	700	600	82	69	Cultivation of sugarcane is said to be decreasing in the Feni subdivision. The low outturn is due to early heavy rainfall. Sugar is not produced from other sources in this district.	The figures for area have been revised since the submission of the last rabi forecast.
	Chittagong ...	5,000	5,700	5,700	50	95	No sugar of any kind is manufactured in this district.	
Patna	Patna	3,000	3,300	3,200	100	100		
	Gaya	20,000	30,600	30,000	100	100	No sugar is produced from any other sources in this district.	
	Shahabad ...	35,000	36,000	36,000	67	100	A normal outturn is expected on account of the favourable rainfall.	
	Saran	40,000	40,000	42,000	100	110	This has been a favourable year to the crop owing to the timely rainfall. The cheap prices of foodcrops and the high price of raw sugar have also increased the cultivation. The normal area has been revised with reference to the survey figures.	
	Champaran ...	13,000	13,000	13,000	80	100	The season is favourable for this crop, and the outturn is expected to be a normal one. No sugar is produced in this district from other sources than cane.	

	Muzaffarpur ..	8,400	8,500	8,500	100	100	The area shown against sugarcane in the estimate of outturn of *rabi* crops, 1898-99, was inclusive of the area under other sugar crops, as there was only one heading "Sugarcane" in that estimate. The correct figure under sugarcane alone is shown here. The area under date-palm is 600 acres, and the estimated outturn is 100 per cent.
	Darbhanga ...	73,900	72,900	73,200	104	104	
	Monghyr ...	6,200	6,200	6,100	73	93	Sugar is not produced from any other sources in this district. The figures both of area and outturn are subject to revision in the final forecast.
	Bhagalpur ...	63,700	63,700	63,700	106	106	Timely rainfall accounts for the favourable return.
Bhagalpur ...	Purnea	13,000	14,500	14,500	98	97	Continuous and excessive rain in Kishenganj accounts for the low estimate shown in column 7. In the Sadar and Araria subdivisions a full crop is expected. Sugar is not produced here from date-palms.
	Malda	6,000	14,500	4,200	75	67	
	Santhal Parganas	16,700	16,700	16,700	98	102	Owing to timely rainfall, the outturn is expected to be slightly above the normal.
	Cuttack	5,000	4,600	4,460	100	104	Seasonable rainfall at the sowing time has raised the estimated outturn above the normal.
	Balasore	4,400	2,300	4,400	88	100	A normal outturn is expected owing to seasonable rains.
Orissa ...	Angul	2,000	2,000	2,000	100	100	The season has been favourable to the sugarcane crop, and an average outturn is expected.
	Puri	3,500	4,000	3,000	75	75	The decrease in the area as compared with that of last year may be attributed partly to the unfavourable weather at the sowing time and partly to the cultivators' want of means to grow this crop, which is more expensive than all other crops grown in this district. The outturn has been estimated at 75 per cent. only on the assumption that there will be timely and well-distributed rainfall.

Division.	District.	Approximate normal area in acres.	Approximate area sown last year (1898) in acres.	Estimated area sown this year (1899) in acres.	Taking 100 to represent the normal outturn, how much represent out-turn last year (1898) ?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1899) ?	Remarks by District Officer.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
Chota Nagpur ...	Hazaribagh ...	32,100	32,100	32,100	100	100		
	Ranchi	200	200	300	90	100	Sugarcane is grown here to a small extent, and is of a very inferior quality. The outturn this year is expected to be better than last year's.	
	Palamau	100,000	93,900	94,700	85	100		
	Manbhum ...	20,000	19,100	13,900	90	80	Sugar is not produced from any other sources than cane in this district.	The Deputy Commissioner will be asked for an explanation of the sudden drop in cultivation. The figures for previous years were probably found open to doubt.
	Singhbhum ...	1,000	1,000	1,000	100	100		
	Total Bengal ...	895,700	898,900	868,900	90	95		

WORKING OF THE INDIAN FACTORIES ACT IN BENGAL DURING 1898.

No. 2466.—The 7th August 1899.—The following is published for general information.

F. A. SLACK,

Offg. Secretary to the Government of Bengal.

No. 2250, dated Calcutta, the 26th July 1899.

From—F. A. SLACK, Esq., Offg. Secy. to the Govt. of Bengal, General Dept.,
To—The Secretary to the Government of India, Home Department.

I AM directed to submit the Report on the working of the Indian Factories Act, XV of 1881, as amended by Act XI of 1891, in Bengal, during the year 1898. The prescribed statements, Forms I and II, are appended.

2. *Number of factories and system of work.*—The total number of factories actually at work at the end of the year 1897 was 167. Sixteen factories were brought under the Act during the year under report, viz., 3 in the 24-Parganas, 1 in Hooghly, 1 in Howrah, 8 in Dacca, 2 in Purnea, and 1 in Cuttack. At the same time 2 factories in Howrah were removed from the list, and 1 in Jessore remained closed during the year. The total number of factories actually at work at the close of the year 1898 was therefore 180. In 88 factories work was carried on by shifts or sets; in 73 by midday stoppages; in 4 by a combination of shifts and midday stoppages; and in 14 by other means. There is one factory in Dacca, not at work at the close of the year, for which no return was received. The number of factories exempted from the rule requiring a Sunday or weekly holiday was 33 as against 28 in the previous year. The average daily number of operatives in the mills aggregated, men, women and children, 165,027 against 166,828 in 1897. The details for both years are given in the table below. To it have been added, for the purposes of illustrating the growth of factories in Bengal, the figures for 1893:—

	1898.	1897.	1893.
Calcutta	4,892	5,853	5,343
Burdwan	3,119	2,748	2,459
Midnapore	82	151	98
Hooghly	18,650	19,184	12,913
Howrah	39,400	39,023	28,144
24-Parganas	80,879	80,983	72,833
Nadia	65	74	90
Jessore	.....	.....	78
Rajshahi	456	536	384
Darjeeling	110	107	100
Rangpur ...	848	773	572
Pabna*	119	4,056	3,572
Dacca	6,871	4,784	5,973
Patna	330	331	253
Shahabad	818	808	904
Saran	1,113	661	273
Darbhanga	751	604	379
Monghyr	5,226	5,300	4,898
Bhagalpur	460	386	449
Purnea	100	.....	.....
Cuttack	368	216	258
Chittagong	370	250	.....
Total ...	165,027	166,828	139,973

* A large factory at Serajganj was destroyed by the recent earthquake, and the business was re-opened on new premises erected near Calcutta.

If the returns have been accurately furnished, the plague scare of 1898 produced no serious diminution of labour at the factories except in the city of Calcutta Proper. The managers had just cause for anxiety, but the effects seem to have been much smaller than was at the time believed.

The Special Inspector of Factories reports that electricity as an illuminant has become quite general in the large mills and in a few workshops; but that as a motive power it is little used.

The question of the closing of jute mills early on Saturdays was considered during the year, and a special report was submitted to the Government of India on the subject. The mill-owners agreed to close their mills entirely on Saturdays for six months, commencing from the 1st April 1899, an arrangement which happily obviated the necessity of future consideration of the conflicting proposals on the subject. Subsequently, however, to the great regret of all concerned, this agreement was abandoned by the contracting parties; and the matter stands exactly where it did. * * * *

3. *Inspections.*—Ten factories were inspected once, 12 factories twice, 41 thrice, and 114 more than three times. Three factories in the district of Dacca, viz., the jute presses of Mr. J. Nicholas, Tanbazar, and of Messrs. Alexander and Company, Sital Lakhya, and the jute factory of Messrs. Watt Brothers and Company, Madanganj, were not inspected. An explanation of the omission to inspect these factories will be called for. It is reported that the results of inspections were generally satisfactory, and that the suggestions of the inspecting officers as regards sanitary arrangements, fencing of machinery, and other matters were, as a rule, readily attended to by the mill managers.

4. *Sanitary arrangements and ventilation.*—The sanitary condition of the factories and the sanitary arrangements in them continued to be generally satisfactory. Factories were, as a rule, well ventilated, and proper steps were taken by mill managers to keep them clean.

5. *Quarters for operatives.*—There is still much that is unsatisfactory in the reports received this year. The Superintendent, Campbell Hospital, made certain remarks with regard to the overcrowded and insanitary condition of the bustis in Cossipore-Chitpur. The Magistrate of the 24-Parganas, to whom the matter was referred, reports, however, that he visited some of these bustis where cases of plague had occurred, and was generally satisfied with their cleanliness. The Civil Medical Officer of Serampore states that the mill hands there are mostly low-class up-country people who habitually neglect all rules of sanitation, with the result that their bustis become hot-beds of disease. Similarly, the Magistrate of Howrah writes that the mill operatives, chiefly from Bihar and the North-Western Provinces, live in ill-ventilated huts specially set apart for them. They cluster in hundreds on undrained sites, and are a source of danger to others. These men are for the most part drawn from country villages where rules of sanitation are unknown; and it is not strange that they should keep to the rustic methods to which alone they are accustomed. On the other hand, all the best mills in the neighbourhood of Calcutta have constructed excellent quarters for their coolies. They find it profitable to do so. Even rustics of the Upper Provinces prefer clean, tidy, healthy dwellings, if they can get them, and the mill which provides these will always command the best supply of the best labour. For this reason, that good housing of the mill hands is to the true interest and advantage of the mills themselves, the Lieutenant-Governor has the hope that the example of the better mills will quickly spread. Meanwhile the Magistrates of Howrah and Serampore will use all their influence to that end.

6. *Vaccination of operatives.*—As a rule no one is admitted into a factory unless he has been vaccinated. Why the practice is not invariably insisted on appears from the following remarks of the Magistrate of Howrah:—

"The up-country part of the population is, however, averse to vaccination, and unprotected persons are everywhere sufficiently numerous to be a great source of danger when small-pox appears. Attempts to get managers of factories to use their influence in this matter have not, as a rule, been successful. It appears to me that there is a great and, I think, excessive tenderness on the part of managers in doing anything to arouse the prejudices of their employés, and this has undoubtedly been increased by the scares involving a temporary loss of labour which have occurred in recent years. In some respects it seems to me that this is pushed beyond the limits of real prudence. I mean that the employés learn to count on getting their own way and that future trouble is thereby stored up"

7. *Water-supply.*—The water-supply in most factories, though drawn from various sources was, as reported last year, generally satisfactory.

8. *General health of the operatives.*—The general health of the operatives was good during the year. A few cases of cholera occurred at the Pottery Works of Messrs. Burn and Company at Raniganj, and in the Narayanganj cooly lines in the district of Dacca; but these occurrences were not due to any negligence on the part of the managers to adopt precautionary steps. The Commissioner of the Presidency Division has made the following observations on this subject:—

"The general health of the operatives was, on the whole, good. During the latter half-year, malarial fever prevailed in some quarters. There was an outbreak of low malarial fever at the Budge-Budge and the Clive Jute Mills. Dr. Comley, who was especially appointed to report about this, considered that the prevalence of the disease was for the most part due to the insanitary condition of the bustis near those mills. He suggested certain remedies, and steps are now being taken for the improvement of the bustis on the lines suggested."

9. *Wages and general condition of the operatives.*—There was no material change during the year under review in the rates of wages paid to different classes of operatives, which are generally higher than those prevailing for agricultural labour in the neighbourhood. It is, however, to be borne in mind that the coolies recruited from the North-Western Provinces and Bihar come here to save the greatest sum of money in the shortest time. They rigidly limit their expenditure to the lowest sum necessary to support, not health, but life. They live in the meanest huts, and eat the worst food, because these are the cheapest. Hence there is no necessary connection between the wages received by them, and their physical condition. Last year it was stated that the condition of the operatives in the Kajla Silk Filature was poor, though the rate of wages paid was fair. The Commissioner of the Rajshahi Division reports that during the year under report the operatives in this factory received good wages in comparison with those received by labourers employed on other works. Their condition is reported to have been tolerable.

10. *Employment of women and children.*—The rules regarding the employment of women and children were duly observed. Light work such as spinning, weaving, &c., was given to them. Women and children were employed in large numbers in jute and cotton mills and presses, where the system of work was carried on mainly by shifts or sets, with intervals of rest and general and occasional holidays. Special care was taken not to admit children of doubtful ages until they were examined and passed by the certifying surgeons. Accidents to children in cleaning the machinery when it was in motion were very few, and these were due to disobedience of the factory rules.

With regard to the improper employment of children, Mr. Duke, Magistrate of Howrah, on two or three occasions detected children under age working in certain jute mills. The excuse invariably was that their presence was unauthorised; that they had come with food for their parents. He remarks that it is against the interest of the managers to enrol children in their books as workers until they are worth the pay of their class; hence there is a strong temptation to let them hang about the mills and pick up the necessary knowledge beforehand. He suggests as the best remedy the absolute prohibition of the presence of such children in rooms in which work is going on—a prohibition perhaps hardly required by the present dimensions of the evil.

The Special Inspector has made the following remarks on this subject:—

"As several fatal accidents have happened in jute mills to women working at the softeners, I think it would not unduly hamper the managers if women were forbidden to work at these machines, at least at the feed-end: the work is decidedly arduous, and bangles on their arms and wrists, and anklets on the feet, have, on several occasions, been the direct cause of fatal accidents. In the majority of mills only men are employed for this work."

The fatal accidents to women in jute mills were this year very numerous, and these remarks will be commended to the managers of all jute mills.

11. *Fencing of machinery.*—The machinery in the factories is generally reported to have been properly fenced. The following remarks are quoted from the report of the Special Inspector of Factories:—

"It will be seen from the list of fatal accidents that several have occurred again at the jute-softener. I have always considered this machine one of the most dangerous to work at, and years ago recommended that automatic travelling tables should be fitted at both ends,

and thus avoid the necessity of placing the jute by hand near the rollers. I inquired into the cause of the last accident at this machine, which occurred at the Sibpur Jute Mill, and it appears that the woman allowed jute to become entangled with her foot. I calculate that six or eight seconds must have elapsed before her foot entered the rollers, and had any of the workers about (and there were numbers of them) thrown over the lever to stop the machine, no accident would have happened; but it transpired that many hearing her screams rushed away, and those that came to her assistance simply pulled at her: not one having the sense to throw over the lever. I do not think anything further can be done to guard the machine, but, as already suggested, women might be forbidden to work at the 'softener.'

"A fatal accident occurred at the Bengal Spinning and Weaving Mill, whereby the oil-man lost his life when oiling the bearings of the first-motion pulley. I regret that I did not specially specify a guard to be placed near this bearing, as I had always considered such places dangerous. I note from my back inspection report the following passage, with reference to this factory, dated 12th May 1896:—

'Nothing has been done to place a hand-rail from the engine-room to the first and second-motion pulleys, the bearings of which have to be oiled and examined by walking along a narrow plank saturated with oil: any slip might result fatally.'

"At my subsequent inspections hand-rails had been erected, but an additional guard in this place would have been some help when oiling, although in large steamers the engineers are compelled to oil the engines with less guards than mill engines are provided with, and frequently in very rough weather."

12. *Accidents.*—The number of accidents that occurred during the year was 553 as against 651 and 493 during the two preceding years. Two hundred and seventy-nine were of a serious nature, and 246 were of a slight nature; and 28 proved fatal, nine more than in any previous year.

The following is a list of the more notable of the fatal accidents:—

(1) One man was killed by being jammed when shunting wagons on the East Indian Railway workshop.

(2) A girl (four years of age) was found dead under a bundle of twist yarn at the Baranagore Mill (North).

(3) A man was killed at the Khardah Mill working at the jute-softener: his arm was torn out at the shoulder.

(4) A woman was killed at the jute-softener in the Clive Jute Mill: the jute became entangled in a bracelet she wore, and drew her arm into the rollers.

(5) One man was killed at the softener machine in the Shamnagore Jute Mill.

(6) A man was killed at the Victoria Jute Mill; jute having lapped his body, he was drawn into the jute-softener.

(7) A woman engaged in feeding the softener at the Sibpur Jute Mill got some jute entangled round her foot, and the leg was drawn into the rollers.

(8) One man died at the Bally Mills from scalds he received by opening the man-hole of a boiler (for boiling grass or rags) before all the steam had been exhausted.

(9) An oil-man was killed at the Sibpur Jute Mill when engaged in oiling the mill engine: he was knocked over by the crank and crushed.

(10) One man (a prisoner) in the Bhagalpur Jail was killed in endeavouring to replace a belt on the pulley: he was caught by the belt and carried round the shaft.

(11) One man was killed at the Dunbar Cotton Mill by replacing a belt: he was carried round the shaft and received injuries, from which he died.

(12) The oil-man at the Bengal Spinning and Weaving Company was killed when oiling the first-motion pulley shaft: the ropes must have caught some loose clothing and severed the legs from the body.

(13) One man was killed by a fall when oiling a shaft at the Ganges Jute Mill.

(14) A woman was killed in the Howrah Mill by a trolly accidentally knocking her down and running over her.

(15) } These men were killed at the Mathematical Instrument Department on 16th February 1898, by an explosion of gas. The men were searching for an escape of gas, and finding a small locked godown smelling strongly of gas, went inside and struck a light causing the explosion. Ventilators have since been put in.
(16) }
(17) }

13. *Prosecutions* —There were three prosecutions under the Factory Act during the year under report. The proprietors of the Jheel Press at Cossipore in the 24-Parganas were prosecuted under section 15 (*g*) of the Factories Act for neglecting to keep their latrine in a cleanly state and on conviction, they were fined Rs. 50. The Manager of the Sura Jute Mill in the same district was prosecuted under section 15 (*i*) of the Act for neglecting to send notice of an accident either to the Magistrate or to the Police. On conviction, he was fined Rs. 32. The Manager of the Magra Bone Factory in the district of Hooghly was prosecuted for neglecting to give the notice required by section 14 of the Factories Act, and on conviction was fined Rs. 40.

"RESOLUTION ON THE ANNUAL REPORT ON THE GOVERNMENT CINCHONA PLANTATION AND FACTORY IN BENGAL FOR THE YEAR 1898-99."

FINANCIAL DEPARTMENT.—MISCELLANEOUS.

Calcutta, the 5th August 1899.

RESOLUTION—No. 4557Mis.

READ—

The Report on the Government Cinchona Plantation and Factory in Bengal for the year 1898-99.

Read also—

The Report for 1897-98 and the Resolution of Government recorded thereon.

THE rainfall for the year was normal. The low temperature which prevailed in January 1899, did considerable injury to the nursery beds of the Mungpoo Division, and the mortality among the seedling plants was so great that the proposed extension of the plantation for the coming year will have to be considerably curtailed. The number of trees uprooted at the plantation for their bark was 469,440 against 245,109 in the previous year, while 170,136 young trees were planted out. The result of the year's operations was that the total number of living plants (excluding the nursery stock, which amounted to 138,080) at the close of the year was 2,179,245.

2. The crop of the year amounted to 236,098 lbs. of dry bark, all of which was obtained from the trees uprooted in the Government plantations in Sikkim. The bulk of the bark was of the quinine-producing sort, and, with the exception of 1,003¾ lbs. supplied to medical depôts or sold to Government officers and to the public, the whole crop was, as usual, made over to the cinchona factory for manufacture into quinine and febrifuge. Besides the bark obtained from cropping, 131,615 lbs. of bark were purchased from private plantations in Sikkim and Southern India. The Superintendents of Cinchona Cultivation, Bengal and Madras, met at a conference to consider the question of the relationship of the Bengal and Madras factories, respectively, towards the bark market in Southern India, and a definite understanding was come to regarding future purchases of bark in that locality.

3. The outturn of the factory was 10,335 lbs. of sulphate of quinine and 3,921 lbs. of cinchona febrifuge against 10,149 and 4,075 lbs., respectively, in

1897-98. The following statement compares the issues of the year with those of the preceding year:—

	1897-98.		1898-99.	
	Sulphate of quinine.	Cinchona febrifuge.	Sulphate of quinine.	Cinchona febrifuge.
1	2	3	4	5
	lbs. oz.	lbs. oz.	lbs. oz.	lbs. oz.
To Medical Depôt, Calcutta	1,739 0	500 0	1,535 0	400 0
Ditto, Mian Mir ...	2,851 8	500 0	2,165 0	.....
To Inspector-General of Civil Hospitals, Bengal (for District Medical Officers, Bengal).	.....	100 0	.....	60 0
To Inspector-General of Jails, Bengal (for jails and lock-ups in Bengal).	2 0	.....	5 0	1 0
To Inspector-General of Jails, Bengal (for making into pice-packets at Alipore Jail).	2,200 0	.....	2,200 0	.....
To Inspector-General of Jails, Bengal (for compensation for loss of weight in conversion into pice-packets).	22 0	.....	22 0	.....
To Inspector-General of Civil Hospitals, North-Western Provinces and Oudh (for making into pice-packets at Aligarh Jail).	800 0	.....	50 0	.....
To Inspector General of Civil Hospitals, North-Western Provinces and Oudh (for compensation for loss of weight in conversion into pice-packets).	8 0	.....	0 8	.....
Sold to Government officers, dispensaries, and medical missions, &c.	3,314 $2\frac{2}{16}$	.....	2,785 $14\frac{1}{8}$	.....
Sold to Government officers and to the general public.	.....	2,297 4	.....	2,528 8
Given as samples	2 $7\frac{1}{14}$	1 0	3 $2\frac{1}{8}$	4 4
Total ...	10,939 $2\frac{2}{16}$	3,398 4	8,766 $8\frac{1}{8}$	2,993 12

The decrease in the issues of sulphate of quinine is due to a diminished demand on the part of the medical depôts in the Bengal and Punjab Commands, to the transfer to the Madras factory of the obligation to supply the North-Western Provinces with the drug, and to the falling off in the demand by Government officers and medical missions for distribution to the poor. The decrease of $404\frac{1}{2}$ lbs. in the issues of cinchona febrifuge is attributed to the fact that Government officers took smaller supplies than in the previous year. The stock of sulphate of quinine in hand at the close of the year was greater by 1,569 lbs. than it was at the close of the year 1897-98.

4. The following statement compares the receipts from the sale of sulphate of quinine, cinchona febrifuge, cinchona bark, and other products of the plantation during the last two years:—

	1897-98.	1898-99.
	Rs.	Rs.
By sale for cash	73,220	73,327
By credit from the medical depots and Port Blair.	60,548	52,871
By credit from the Inspector-General of Civil Hospitals, Bengal.	1,000	600
By credit from the Inspector-General of Jails, Bengal—		
For jails	30	95
For pice-packets	30,800	31,900
By credit from the Inspector-General of Civil Hospitals, North-Western Provinces and Oudh.	11,200	725
Total ...	1,76,798	1,59,518

5. The expenditure on the plantation amounted to Rs. 58,472 against Rs. 66,509 in the previous year, the decrease being chiefly in the temporary establishment and in the salaries of European assistants. The amount spent on account of the factory fell from Rs. 89,278 to Rs. 65,468. Of this reduction however, Rs. 25,756 was due to smaller purchases of bark in Madras, and the Superintendent points out that this cannot be regarded as a true saving as it would have been to the advantage of the factory to spend the full allotment of half a lakh.

6. The cash receipts show a surplus over cash expenditure of Rs. 35,579; but, owing to the fall in the price of bark, there has been a large decrease in the value of the stock in hand; and Dr. Prain estimates the net profits at Rs. 10,879 as against Rs. 11,632 last year. Under the circumstances this must be held to be satisfactory.

7. The Lieutenant-Governor desires to thank Major Prain, and also Mr. R. Pantling, the Deputy Superintendent of the Cinchona Plantations, for their efficient management of the plantation and factory during the year.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE TRIENNIAL REPORT ON THE WORKING OF THE CHARITABLE DISPENSARIES IN BENGAL FOR THE YEAR 1896, 1897-98.

MUNICIPAL DEPARTMENT.—MEDICAL.

Calcutta, the 7th August 1899.

RESOLUTION—No. 3994Medl.

READ—

The Triennial Report on the working of the Charitable Dispensaries in Bengal for the years 1896, 1897 and 1898.

Read also—

The Triennial Report for the years 1893, 1894 and 1895, and the annual returns for 1896 and 1897 and the Resolutions recorded upon them.

THE Triennial Report was due to Government on the 1st of May and was submitted on the 3rd of July. It is explained that the delay is due to the necessarily large volume of statistics required and the difficulty of obtaining correct figures from the local officers.

2. *Number of Dispensaries.*—The number of dispensaries rose from 450 in 1895 to 492 in 1898. There is a gratifying increase in the number of Local Fund dispensaries, which have increased from 215 to 289 during the period under review. To this total the District Board of Backergunge contributed no less than 14 new dispensaries. In the same district a system of medical relief was inaugurated which Colonel Hendley rightly regards as being almost as important as the opening of new dispensaries. This is the bringing of medical aid to the homes of the people by entrusting simple medicine chests to the headmen of villages remote from dispensaries. Another system favourably noticed by Colonel Hendley is that by which a medical officer visits certain centres at short fixed intervals. This system has been worked with success in Ranaghat by private agency, and is said to be employed extensively in the more sparsely populated parts of Russia. Both systems seem well suited to Bengal, and the Lieutenant-Governor will be glad if the Inspector-General of Civil Hospitals can arrange to give them a more extended trial.

3. *Administration.*—An unsatisfactory feature of the administration noticed in the last report was the inferiority of the subordinate medical staff relatively to that of other provinces. During the past three years important steps have been taken towards remedying this, both by improving supervision and by the introduction of several necessary reforms. Of these the most noticeable is the improvement in the position and prospects of Civil Assistant Surgeons. Seven Civil Surgeoncies have recently been allotted to this class of medical officers, and a senior grade on Rs. 300 per mensem has been created. Unemployed pay, which was felt as a serious hardship, has also been abolished. These changes should go far towards increasing the attractiveness of this branch of the service.

In the matter of the medical education of Hospital Assistants an important advance has been made by extending the course of instruction in vernacular medical schools from three to four years, with the special object of including medico-legal work in the curriculum.

It was noted in the last resolution as a serious defect in medical administration that the power given to the supporters of private dispensaries of engaging any medical men they chose often led to the appointment of unsatisfactory persons. This has since been remedied by making all such appointments subject to the approval of the Inspector-General of Civil Hospitals. Colonel Hendley is now of opinion that still more power in this respect should be put into the hands of the Inspector-General of Civil Hospitals, and that he should be given authority to remove any man whom he considers incompetent, and to veto the removal of any incumbent. It may, however, be doubted whether the

advantages to be gained by a more efficient and centralised control would not be more than counterbalanced by the alienation of sympathy and interest of those who support the institutions, and who would feel that their powers and rights had been impaired. Another change which has been made is the fixing of an average rate of contribution from local bodies for the loan of Government Medical Officers. Instead of paying the actual grade pay of the officer appointed—a charge which often weighed heavily on their resources when a senior officer was appointed to a poor dispensary or was promoted while in charge of it—they are now required to pay a fixed contribution irrespective of the grade of the officer in charge. The advantages of this change are obvious, and the system has worked excellently in practice.

4. *Inspections.*—The number of inspections of outlying dispensaries by Civil Surgeons rose from 391 in 1896 to 409 in 1897 and 420 in 1898. Colonel Hendley has paid particular attention to the question of inspections and has treated the subject in a thoroughly practical manner. While reducing where necessary the number of inspections previously prescribed, he has taken great pains to ensure that inspections shall in all cases be thorough, and such as will be of practical assistance to the Civil Surgeons' subordinates. Since his appointment in April 1898, Colonel Hendley has himself visited nearly all the important civil stations in Bengal, and subsequently to the amalgamation of the Sanitary Commissioner's office with that of the Inspector-General of Civil Hospitals, he has had the benefit of Major Dyson's assistance in this branch of work.

5. *Management by local bodies.*—The number of dispensaries managed by local bodies during the last three years was as follows:—

	1896.	1897.	1898.
Municipalities	122	123	125
District Boards	138	153	157
Joint	1	2	3

In the last Triennial Report the Inspector-General of Civil Hospitals had to complain that local bodies generally showed a want of interest with regard to the management of dispensaries. Colonel Hendley now reports an improvement in this respect. He has, however, still some complaints to make, of which the most important is given as follows in his own words:—

"Municipal contribution towards the maintenance of dispensaries is fitful, and is regulated in accordance with the amount of private subscriptions, &c.; that is to say, if the income of a dispensary from these and other sources is sufficient just to meet its bare requirements, the Municipality expends nothing from municipal funds upon it. No great improvement or reform can be hoped for unless it is laid down that, no matter whatever the income from local sources may be, the municipalities must contribute a certain percentage of their income towards the maintenance, improvement, etc., of the medical charities under their care, or that they must meet all ordinary charges, leaving most extensions and all those extra expenses which go to make up the success of a medical institution to the charity of the public."

The Inspector-General has already submitted proposals to Government on this point, and the matter has been separately considered and orders passed. While fully sympathising with Colonel Hendley's laudable desire to remove the deficiencies in dispensary administration which do no doubt exist, the view of the Lieutenant-Governor is that the proper remedy is to be found, not in fixing a minimum for all municipalities, whose needs and resources must vary according to their circumstances, but in watching individual cases of neglect, and in stimulating expenditure in such cases by bringing them to the notice of the local officers. To adopt Colonel Hendley's proposal would be to check the flow of private charity by declaring that it shall in no case whatever suffice. It is to be observed that additional motive power in this matter has been given to municipal expenditure on medical charities by the amendment in 1896 of section 69 of the Municipal Act, under which medical expenditure is now under the control of the Commissioner. That municipalities are on the whole not backward relatively in contributing to dispensaries is shown by the fact that in 1897-98 the municipalities of the North-Western Provinces with a total income of nearly 45 lakhs contributed Rs. 60,000 to dispensaries, while in Bengal out of an income of 38 lakhs municipalities contributed Rs. 1,86,000. Moreover, the figures given in paragraph 12 of Colonel

Hendley's report show that the proportion of patients treated in municipal dispensaries to the population of the municipalities themselves is 48·61 per cent.—a fact which clearly indicates that the area of municipal charity extends far beyond municipal limits. The Lieutenant-Governor observes with pleasure that municipalities are on the whole fully sensible of their obligations in the matter of medical charity, and has no doubt that, as opportunity serves, there will be still further advancement in this important duty.

6. *Patients.*—The number of indoor and outdoor patients treated in dispensaries during the period under review as compared with the figures of the three previous years is as follows:—

Year.	Patients.			Population excluding Calcutta.	Ratio per cent. of total treated to population.
	Indoor.	Out-door.	Total treated.		
1	2	3	4	5	6
1896	47,109	2,637,501	2,684,610	70,665,428	3·79
1897	55,644	2,778,468	2,834,112		4·01
1898	42,086	2,837,759	2,879,545		4·07

The increase in the number of outdoor patients in 1898 is particularly satisfactory, inasmuch as it occurred in an exceptionally healthy year and one in which the fear of plague measures might have been expected to deter the people from having recourse to Government dispensaries. In other provinces the attendance shows a large falling off, which is ascribed mainly to this cause, and the fact that the contrary was the case in Bengal is testimony to the increasing popularity of the dispensaries and to the confidence felt by the people in their administration.

The following table shows the comparative attendance in Bengal and other provinces:—

Province.	Number of dispensaries.	Area of the provinces in square miles.	Square miles per dispensary.	Population of the province.	Population per dispensary.	Number of patients treated.	Number of patients per dispensary.
1	2	3	4	5	6	7	8
Bengal	487	151,543	311	70,665,427	145,103	2,879,845	5,913
Bombay	337	125,144	371	18,901,123	56,086	1,710,219	5,074
Madras	496	141,189	280	35,630,440	71,835	4,048,329	8,161
Central Provinces	121	71,582	591	9,501,401	78,524	1,512,489	12,499
Punjab	265	110,667	417	20,866,913	78,720	3,241,543	12,232
North-Western Provinces ...	331	107,507	324	46,905,055	141,707	3,635,480	10,983
Burma	99	171,430	1,731	7,605,560	76,820	754,458	7,620

As has been noted in previous reports, a principal cause of the comparatively low attendance in Bengal is the number and popularity of the local kobirajes and hakims, whose paid service are largely preferred by the people to the gratuitous services of the dispensaries. So far as this is evidence of the prosperity and independence of the population of Bengal, and of their reluctance to avail themselves of charitable assistance when they are able to help themselves, it is a matter for satisfaction rather than regret. Colonel Hendley expresses himself as not unmindful of the claims of private practitioners, and rightly disclaims all idea of competing with them. At the same time he considers that the charitable dispensaries have not yet reached all those for whom they are intended, and ascribes the reluctance to attend of those who would otherwise do so as in part due to the low standard of accommodation and the want of additional comforts in them. The Inspector-General of Civil Hospitals does not lose sight of the fact that the proportionate expenditure on patients is considerably higher in Bengal than in most other provinces, and his remarks on this subject contained in a circular addressed by him to all Civil Surgeons deserve quotation. They are as follows:—

"In nine cases out of ten it is not so much to want of money as to want of persistance and ingenuity that the bad condition of our hospitals is to be attributed. A good Surgeon

who is possessed of tact, skill and enthusiasm, as a rule, will soon be able to indoctrinate others with some of his zeal, and at all events be able to make a number of small improvements which will add to the popularity of his dispensary and increase the comfort of the people under his care. It does not take much money to put up a few pictures in a ward; to whitewash the lower panes of a window so as to prevent passers-by from looking into the room; to make a pathway across a swampy compound; to erect screens so that women may be seen in privacy, to cleanse walls and floors, nor does it lower the Hospital Assistant's dignity or even his influence to be courteous to all and polite to women or kind to children."

There can be no question as to the soundness of these eminently practical remarks, and no doubt that the method suggested in them must do much towards raising the attendance in the Bengal dispensaries to its proper level. The Lieutenant-Governor earnestly commends them to the officers in charge of dispensaries and hospitals throughout the province. These may seem small matters; but it is these little acts of consideration and thoughtfulness for the comfort of the patient, that add, out of all proportion to their apparent value, to the attractiveness of a hospital.

7. *Indoor patients.*—The number of dispensaries which offered indoor relief, the number of beds provided, and the daily average of indoor patients is as follows:—

	Dispensaries for indoor patients.	Number of beds provided.	Daily average of indoor patients.
1	2	3	4
1896 ...	192	3,057	1,898
1897 ...	201	3,247	2,227
1898 ...	203	3,314	1,868

The decrease in 1898 was due to the plague scare. The reasons noted by Colonel Hendley for the comparatively low general attendance at dispensaries have particular force as regards indoor attendance. Special attention has been given to the questions of providing pauper wards and of attaching to dispensaries free quarters for the relatives of patients, both of which were noted on in the last triennial Resolution. In accordance with the remarks therein contained, enquiries have been made into both matters. As regards the provision of pauper and moribund wards, it is pleasant to note that great advances have been made, and that all the improvements of which finances would permit have been provided. Want of funds, however, has prevented much being done towards providing accommodation for relatives of patients. Until much more has been effected to increase the comforts of the patients themselves, those of their relatives must for the present remain in the background. The question of abolishing indoor treatment in outlying dispensaries where in-patients cannot be treated as they should be, has been considered and rejected, on the ground that any indoor accommodation is better than none, and that where defects exist, the defects themselves, and not the boon conferred by indoor treatment, should be got rid of.

8. *Diseases treated.*—The following table shows the number of cases of the principal diseases treated at dispensaries during the three years under review, with the corresponding total mortality among the general population:—

	Small-pox.	Cholera.	Dysentery and diarrhœa.	Malarial fevers.	Diseases of the spleen.	Skin diseases.	Eye and ear diseases.
1	2	3	4	5	6	7	8
Cases treated, 1896—98 ...	515	37,659	4,58,201	15,70,880	3,17,563	11,75,170	6,38,306
Total mortality among general population during 1896—98	47,312	4,88,091	1,38,912	48,58,846	.....	.....	.....

These statistics have been obtained from the collation of figures in the now amalgamated offices of the Inspector-General of Civil Hospitals and the Sanitary Commissioner, and have been corrected from the later figures received in the separate report of the latter on sanitation. It will be seen that only a very small percentage of cholera and small-pox cases are taken to dispensaries for treatment. The largest number of admissions, as is natural, is due to malarial fevers. In this connection it is noticeable that during the period under review the quantity of quinine sold at post offices fell from 31,867 packets in 1896 to 27,905 in 1897 and 24,295 in 1898. This subject is engaging the special attention of the Inspector-General of Civil Hospitals.

9. *Surgical operations.*—The division of operations into "major" and "minor" which was followed in previous reports has now been abolished under the orders of the Government of India. The consensus of professional opinion in the province is that the present system of classification is in several ways defective, and that opinion is now being considered by the Government of India. The progress made during the last three years is shown by the following statement:—

	Number of operations.
1896	124,067
1897	135,505
1898	137,123
Average 1893 to 1895	105,740

Large as has been the increase in the number of operations during the present period, it still remains far below that in the North-Western Provinces and the Punjab. Colonel Hendley does not accept the explanation which is frequently given that the inhabitants of Bengal are averse to surgical operations, and ascribes the comparatively low figures in Bengal to lack of attention on the part of medical subordinates to this branch of work. The remarks contained in his circulars and inspection notes which are annexed to the report show that he has given special attention to this subject, and the Lieutenant-Governor will await the results with interest.

In the selected list of surgical operations performed by individual officers, the list is headed among Civil Surgeons by Major T. R. Macdonald, I.M.S., with 419 operations, Lieutenant-Colonel A. Tomes, I.M.S., with 413, and Lieutenant-Colonel Macrae, I.M.S., with 406. Among Civil Assistant Surgeons Babu Bepin Vehary Gupta stands first with 482, and among Civil Hospital Assistants Babu Nibaran Chunder Sen and Babu Basanta Kumar Chakerbati performed 136 and 101 respectively.

10. *Class and sex of patients.*—The sexes of patients treated during the period under review are given as follows:—

	Men.	Women.	Children.	Total.
1896 ...	1,603,533	423,238	6,57,839	2,684,610
1897 ...	1,711,742	458,670	6,63,700	2,834,112
1898 ...	1,762,033	462,412	6,55,400	2,879,845
Total ...	5,077,308	1,344,320	1,976,939	8,398,567
Total for 1893, 1894, and 1895 ...	3,901,382	1,060,813	1,729,562	6,691,757

The continuous rise in the number of females is particularly satisfactory, and shows clearly the increasing confidence of the people in the dispensaries. The proportion of females is slightly lower in 1898 than in the previous year, owing to the credence given to rumours that Government plague measures in some way affected the honour and safety of women. Even in this year, however, there is an increase in the total numbers treated. The number of Hindus treated in 1898 was 1,735,605 as against 1,059,108 Musalmans.

11. *Finance.*—The following table compares the income and expenditure of the dispensaries for the last three years:—

	1896.	1897.	1898.
1	2	3	4
Income.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Cash balance on 1st January	25,497 3 10	27,048 13 5	42,428 15 11
From Government—			
As salaries—			
Medical officers	45,810 9 4	48,157 9 3	61,370 8 2
Inferior dispensary establishment (including menial servants).	6,316 9 9	7,150 15 7	7,832 1 7
As registers and forms	4,655 0 7	5,413 8 10	5,979 11 4
As European medicines	1,850 7 8	2,545 3 2	2,756 1 8
For diet, including police cases	4,556 9 9	6,331 3 1	6,523 2 2

The main sources of income are of course contrbutions from local funds and private subscriptions. Of these, the former has already been noticed. As regards subscriptions, Colonel Hendley now renews a suggestion previously made by Dr. Harvey in 1894, that subscriptions for special objects tending to

the improvement of comfort in dispensaries should be kept distinct from the fund administered by the local managing authorities, and should be administered solely by the Civil Surgeons.

He bases this proposal on the fact that in many cases private subscriptions to a dispensary show a falling off after it has been taken over by a Municipality, the reason given being that people are unwilling to pay twice, once in the form of subscriptions, and once in the form of taxation, for the same charity, and that they consider that their subscriptions, intended by them for a special charitable purpose, are merely applied to the relief of local taxation. Colonel Hendley's proposal has been separately submitted, and is now engaging the attention of Government.

In the meantime it may be remarked that though in some cases there has undoubtedly been a falling off in subscriptions of the nature indicated, still their total amount in 1898 was higher than it has ever been before, and aggregated in that year over 2½ lakhs. The income derived from subscriptions in the North-Western Provinces is slightly over 1 lakh; and after making all due allowances for the difference that exists between the two provinces in wealth and population, it cannot be said that the standard of charity in Bengal is unduly low. On one point in this connection the Lieutenant-Governor is altogether unable to agree with the Inspector-General. Referring to the maintenance of private dispensaries by wealthy individuals, Colonel Hendley says:—

"These are not charitable institutions, but such as it is either incumbent on such persons from their position to maintain for their tenants, servants, or employés, or which they desire to keep up for their own convenience. In all these cases the individual is under the same obligation as, and takes the place of, Government. The inclusion of such expenditure under the heading of 'Subscriptions' is likely to lead to a false impression of the amount of charity which prevails in the province."

The Lieutenant-Governor cannot share this view. He has frequently had much pleasure in publicly acknowledging the munificence of the landed nobility and wealthy classes in this respect, and would on no account wish to convey to them the impression that their generous donations are not received in the spirit in which they are offered. Charity is, it is true, an obligation incumbent upon all alike, but all do not equally appreciate the obligation, and the greater credit is due to those who do.

Deducting the amount invested there was an increase of expenditure of Rs. 66,953 in 1896 and of Rs 78,435 in 1897, and a decrease of Rs. 27,558 in 1898. Under the head of "Diet" there was an increase of Rs. 9,484 in 1896 and of Rs. 28,458 in 1897, and a decrease of Rs. 26,094 in 1898. The variations are accounted for by the famine of 1896-97.

The amount spent on European medicines rose by Rs. 1,743 in 1896, by Rs. 4,952 in 1897 and by Rs. 10,094 in 1898. The large increase in 1898 was due to the purchase of new surgical implements and appliances. The system introduced in 1894 of obtaining the supply of medical stores from Messrs. Burgoyne, Burbidge and Company, of London, and tinctures and other preparations from Calcutta has been generally approved by Civil Surgeons, but has not led to the decrease in expenditure which was anticipated in the last Resolution.

12. The office of Inspector-General of Civil Hospitals was held during the three years by Colonel G. C. Ross, from 1st to 27th January 1896 and from 9th May 1896 to 2nd February 1897; by Colonel G. Hutcheson, from 28th January 1896 to 8th May 1896; by Colonel B. Franklin, from 3rd February 1897 to 27th March 1897; by Colonel J. H. Newman, from 30th March 1897 to 9th April 1898; and by Colonel T. H. Hendley from 10th May 1898 to date.

The thanks of the Lieutenant-Governor are due to Colonel Hendley and his predecessors for the care and attention that they have bestowed upon the administration of dispensaries, and to Colonel Hendley in particular for the present very interesting report. The Lieutenant-Governor also wishes to express his appreciation of the work done by the Civil Surgeons and the subordinate medical staff, whose skill and energy have led to the general improvement which has been made in the period under review, and on whom Sir John Woodburn relies for its continuance in the future.

By order of the Lieutenant-Governor of Bengal,

E. N. BAKER,

Offg. Secy. to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 7th August 1899.

Burdwan.—Rainfall at Sadar 1·91, Kalna 3·37, Katwa 3·89, Raniganj 1·21. Weather seasonable. Transplantation of *aman* paddy continues briskly. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa decreasing. Common rice selling as follows:—

	Srs.	
Sadar	17½	per rupee.
Kalna	15⅝	
Katwa	16	
Raniganj	15¼	

Birbhum.—Rainfall at Sadar 2·49, Rampur Hât ·92. Weather seasonable. Transplantation of paddy nearly over. Sugarcane not doing well. Price of common rice at Sadar 15 seers and at Rampur Hât 17 seers per rupee. Fodder and water sufficient.

Bankura.—Rainfall at Bankura 1·67, Vishnupur ·49. Weather very hot and generally cloudy. Transplantation of rice almost over. Sporadic cases of cow-pox reported. Fodder and water sufficient. Rice is selling at 17¾ seers at Bankura and 17⅝ seers at Vishnupur.

Midnapore.—Rainfall at Sadar ·69, Contai 1·09, Tamluk 1·29, Ghatal 1·85. Prospects of sugarcane, jute and flax favourable, and of *aus* in the Sadar subdivision. Transplantation of winter paddy going on briskly. It is retarded in Sabang and parts of Tamluk and Contai, fields being under water. In Contai rain having stopped, much of excessive water has been drained off and transplanting of rice resumed. Grass-hoppers reported from Debra, and cattle-disease from Salbani. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Contai	17	
Tamluk	13½	
Ghatal	17	

Hooghly.—Rainfall at Sadar 1·14, Serampore 1·28, Jahanabad 1·84. Transplantation of *aman* paddy continues. Jute and *aus* reported to have been damaged in places by excessive rain. Common rice sells at 14 seers 5 chitaks per rupee.

Howrah.—Rainfall at Sadar 1·84, Ulubaria 2·30. Weather hot and cloudy with occasional showers. Transplantation of *aman* going on. Some newly-transplanted seedlings reported to have been damaged by excessive rainfall in thana Amta. Prospects fair. Common rice sells at 13½ seers per rupee. Fodder and water sufficient.

24-Parganas.—Rainfall at Sadar 1·43, Barasat 2·10, Basirhat 1·49, Diamond Harbour ·87. Weather hot. Prospects of standing crops still unchanged. Transplantation of *aman* is going on on high lands and on the lands whence the water has subsided. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	CH.	
Sadar	13 to 17	0	per rupee.
Barasat	15	8	
Basirhat	18	4½	
Diamond Harbour	14	8	

Nadia.—Rainfall at Sadar 1·43, Kushtia 1·45, Meherpur ·53, Chuadanga ·71, Ranaghat 3·33. Weather hot and cloudy. Transplantation of *aman* still going on. Harvesting of *aus* has commenced in places. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	CH.	
Sadar	15	2	per rupee.
Kushtia	17	0	
Meherpur	14	8	
Chuadanga	14	12	
Ranaghat	14	10	

Murshidabad.—Rainfall at Sadar 1·24, Jangipur 3·02, Kandi 2·87. Weather hot. Harvesting of *bhadoi* is going on. Transplantation of *aman* still continues. Indigo and mulberry doing well. Sugarcane is not doing well. Paddy is reported to be under water in some places on account of excessive rain and floods. No cattle-disease reported. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Jangipur	15	
Kandi	18¼	

Jessore.—Rainfall at Sadar 3·27, Jhenida 2·30, Magura 2·67, Narail 1·04, Bangaon 1·79. Weather cloudy and rainy at intervals. Harvesting of *aus* paddy has commenced in some places. Transplantation of *aman* paddy going on. Prospects of crops tolerable. Insects are gradually disappearing. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Jhenida	16	
Magura	18	
Narail	15	
Bangaon	15	

Khulna.—Rainfall at Sadar 1·30, Bagirhat 3·12, Satkhira 2·31. Weather hot and cloudy, with occasional rain. Transplantation of *aman* going on. Insects still damaging paddy to some extent. Fodder and water sufficient. Cattle-disease reported from Rampal. Common rice sells as follows:—

	Srs.	CH.	
Sadar	18	9	per rupee.
Bagirhat	18	0	
Satkhira	17	8	

Rajshahi.—Rainfall at Sadar 1·64, Nator 2·18, Naugaon 2·02. Prospects of standing crops reported fair, but heavy rain and floods causing damage to *bhadoi* and jute crops. Cattle-disease reported from one village in thana Lalpur. Fodder and water sufficient. Common rice sells at 17 seers per rupee.

Dinajpur.—Average rainfall 2·25. Weather seasonable. Transplantation of *haimanti* paddy and steeping of jute progressing. Cattle-disease reported from two thanas. Fodder and drinking-water plentiful. Common rice 17½ seers per rupee.

Jalpaiguri.—Rainfall at Sadar 9·04, Alipur Duars 5·60. Weather seasonable. Transplantation of *haimanti* paddy and cutting of *bhadoi* paddy and jute still going on. Prospects favourable. Fodder and water ample. Common rice sells at 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 3·04, Kalimpong 2·84, Siliguri 6·35. Weather seasonable. *Hills*—*Bhutta*, *chota marua*, and *bhadoi* paddy progressing; *haimanti* paddy and *bara marua* being transplanted. *Terai*—*Jamira* paddy being reaped; *haimanti* paddy being transplanted; *bhadoi*, jute, and sugarcane being cut. Coarse rice sells as follows:—

	Srs.	
Hills	11	per rupee.
Terai	17	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 2·76, Gaibanda 1·19, Nilphamari 2·36, Kurigram 2·33. Weather seasonable. Transplantation of winter rice and cutting of jute going on. Prospects good. Common rice selling at 17½ seers per rupee. Fodder and water sufficient. Cattle-disease prevailing in some villages in thana Jaldhaka.

Bogra.—Average rainfall 2·95. Cutting of *aus* and jute and transplanting of *aman* continue. Prospects good. Fodder and water ample. Common rice sells at 18 seers per rupee.

Pabna.—Rainfall at Sadar 3·23, Sirajganj 2·81. Weather hot and rainy. Prospects of crops good. Price of common rice 16½ seers per rupee.

Dacca.—Rainfall at Sadar ·59, Manikganj ·17, Munshiganj ·37, Narainganj ·36. Weather seasonable. Prospects of crops fair. No cattle-disease. Fodder available. Common rice 18 seers per rupee.

Faridpur.—Rainfall at Sadar 1·52, Goalundo ·61. Weather seasonable. *Aus* being reaped. Prospects of crops fair. Common rice selling at 18 seers per rupee.

Backergunge.—Rainfall at Sadar ·08. Weather hot. Prospects of crops fair except for insects in places. Sowing of *aman* paddy continues. Common rice sells at 16½ seers per rupee.

Tippera.—Rainfall at Sadar 1·45, Brahmanbaria 1·57, Chandpur ·79. Weather seasonable. Cutting of jute and *aus* paddy continues. *Aman* paddy doing well. Insects have disappeared. Average price of common rice 19 seers per rupee.

Noakhali.—Rainfall at Sadar 4·10, Feni 3·11. Prospects fair. Transplantation of *aman* going on. Slight cattle-disease reported from Chagalnaiya. Fodder and water sufficient. Price of common rice, *aman* 17 seers and *aus* 19 seers per rupee

Chittagong.—Rainfall ·61. Weather seasonable. *Aus* being reaped and *aman* cultivated. Prospects good. Common rice 15 seers per rupee. Water and fodder sufficient.

Patna.—Rainfall at Sadar ·69, Bihar ·38. Barh ·59, Dinapore 1·01, Bikram 2·12, Hilsa ·75. Transplantation of paddy going on. Water gradually subsiding. Fodder and water for cattle sufficient. Common rice in Patna sells at 14 seers per rupee.

Gaya.—Rainfall at Sadar 2·15, Jahanabad ·86, Aurangabad ·05, Nawada ·82. Transplantation of paddy continues. *Bhadoi* seriously damaged Common rice selling at 13 seers per rupee.

Shahabad.—Rainfall at Sadar 2·58, Buxar 1·09, Bhabua nil, Sasaram 1·42. *Bhadoi* nearly all damaged. Sunshine has done good to the remaining crop in the Buxar subdivision. Twenty-two cases of cattle-disease reported from the Sasaram subdivision. Fodder and water abundant.

Saran.—Rainfall at Sadar 2·90, Siwan 1·46, Gopalganj 1·38. Weather bright and clear. Transplantation of paddy going on. Prospects of *bhadoi* slightly improved by fine weather. Average prices—common rice 13·15 seers and *makai* 21·11 seers per rupee.

Champaran. Rainfall at Motihari 1·14, Bettiah 5·60, Barharwa 3·30, Bagaha 6·84, Ramnagar 8·16. Excessive rain continued to damage *bhadoi* crops Lowland crops are under water in places. Transplantation of paddy progressing rapidly. Weeding of *bhadoi* going on. Price of common rice 13½ seers and of maize 22 seers per rupee.

Muzaffarpur.—Rainfall at Sadar 5·15, Hajipur 1·22, Sitamarhi 2·92. Transplantation of paddy going on. *Bhadoi* crops damaged by incessant rain. Prices are—Common rice 11 seers, wheat 16 seers, barley 20 seers, *makai* 20 seers, gram 18 seers, and *rahar* 20 seers per rupee.

Darbhanga.—Rainfall at Sadar 2·50, Samastipur 1·25, Madhubani 2·41. Weather sultry and cloudy with occasional showers of rain. Transplantation of paddy is still in progress. Weeding of *bhadoi* crops going on. The cessation of the continuous rain has been beneficial. Common rice selling at Sadar 12 seers per rupee. Fodder and water sufficient.

Monghyr.—Rainfall at Monghyr ·67, Begusarai ·50, Jamui 3·24. Weather hot with occasional showers. Transplantation of winter rice going on. Harvesting of *makai* commencing. *Bhadoi* crops almost ruined by excessive rain Continued break in the rains may possibly help to a partial revival. Common rice sells as follows:—

				Srs.	
Monghyr	...	...	...	12	per rupee.
Begusarai	...	...	...	13	
Jamui	...	...	...	13	

Bhagalpur.—Weather generally sunny. Rainfall at Sadar ·03, Banka 1·09, Madhipura 2·69, Supaul 5·34. The break in the rains, if continued, is likely to improve the *bhadoi* prospects. Sugarcane doing well. Fodder plentiful. Stray cases of cattle-disease reported. Prices rising.

Purnea.—Rainfall at Sadar 2·18, Kishanganj 1·86, Araria 2·85. Weather seasonable. The break in the rains has much benefited the paddy on low lands and facilitated the harvesting of early-sown *bhadoi* and jute. Winter rice being transplanted No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

				Srs.	
Sadar	...	...	...	15	per rupee.
Kishanganj	...	...	...	15	
Araria	...	...	...	16	

Malda.—Rainfall at Sadar 1·88, Shibganj ·88, Gajol 3·42. Heavy rain and flood causing damage to low land *bhadoi* paddy. Winter rice being transplanted. Price of common rice 16 seers per rupee. Fodder for cattle sufficient.

Sonthal Parganas.—Weather hot and sultry. Prospects of paddy good. *Makai* much damaged. Some cattle-disease. Average price of common rice 14¾ seers and of Indian-corn 21½ seers per rupee.

Cuttack.—Rainfall at Sadar 2·09, Jajpur 1·10, Kendrapara 4·29, Banki 1·09. Weather hot and seasonable. *Sarad*, jute, and sugarcane growing. *Beali* in ear and being damaged by insects in some places. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

				S.	ch.	
Cuttack	...	...	...	16	7	per rupee.
Jajpur	...	...	...	17	1	
Kendrapara	...	...	...	19	11	
Banki	...	...	...	17	15	

Balasore.—Rainfall at Sadar ·98. Sugarcane thriving well. Re-ploughing of *sarad* going on. Rice sells at 18 seers per rupee in the interior, and at 17 seers at Balasore and Bhadrak. Fodder and water sufficient.

Angul.—Rainfall at Angul 1 inch, Bisipara 4·46. More rain urgently needed in Angul, where field-work has been retarded. In Khondmals the last week's rain has done much good. Common rice sells at 24 seers per rupee at Angul and 15 seers at Khondmals.

Puri.—Rainfall at Sadar 2·08, Khurda 3·92. More rain badly wanted. Puddling of *sarad* much delayed. *Beali* damaged to some extent in the Sadar subdivision. State of *mandia*, sugarcane, and other miscellaneous crops good. Fodder and water sufficient. Cattle-disease continues in some parts. Price of common rice stationary.

Hazaribagh.—Rainfall at Sadar 2·03, Giridih ·96. Weather hot. Transplanting in progress. Common rice sells at 14 seers per rupee.

Ranchi.—Rainfall ·31. Weather hot and fair. Transplanting of paddy retarded. Rain badly wanted. Rice sells at Ranchi 14 seers per rupee and in the interior 18 seers. Health of cattle good. Fodder and water sufficient.

Palamau.—Rainfall ·37. Weather hot and cloudy. Prospects of paddy and *bhadoi* (except *makai*) good. No cattle-disease. Rice selling at 15 seers per rupee.

Manbhum.—Rainfall at Sadar 1·14, Gobindpur 1·64. Weather seasonable. Prospects of crops generally good. Cattle-disease reported from thanas Chas, Gobindpur and Tundi. Fodder and water sufficient. Average price of common rice at Sadar 17 seers and at Gobindpur 15 seers per rupee. Supply sufficient.

Singhbhum.—Rainfall 2·77. Rain generally sufficient except in Kolhan. Common rice sells at 17½ seers per rupee.

General Summary.—There has been general but comparatively moderate rain during the week. A break has now set in and has been very beneficial to the transplantation of winter rice. In parts of Orissa and Ranchi, however, the transplantation is retarded for want of sufficient rain. The *bhadoi* crops in the Patna and Bhagalpur Divisions have been seriously damaged, and the present break may help to a partial revival only. Reports of the sugarcane crop are good except in parts of Lower Bengal, where it has suffered from excessive rain. The harvesting of early rice and jute is going on. Cattle-disease continues in some districts. Fodder is generally abundant. There was a rise in the price of common rice in the districts of Bihar and Chota Nagpur; elsewhere it was practically stationary.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

REVENUE DEPARTMENT,
The 8th August 1899.

STATISTICAL DEPARTMENT,
The 8th August 1899.

F. A. SLACK,
Offg. Secy. to the Govt. of Bengal.

Abstract of the Results of Meteorological Observations taken at the Alipore Observatory in the month of July 1899.

	Inches.	Date.	Hour.
The mean pressure of the month	29·543		
The average pressure of July from 24 years' registers ...	29·537		
The highest pressure in the month	29·789	31st	10
The lowest pressure in the month	29·353	6th	16
The range of pressure	0·436		
	Hours.		
The total number of hours of bright sunshine during the month	57·3		
The maximum possible number of hours of sunshine ...	413·1		
	⊖		
The mean temperature of the month	83·5		
The average temperature of July from 24 years' registers ...	83·5		
The highest temperature in the month	93·2	1st	
The lowest temperature in the month	75·6	27th	
The range of temperature during the month	17·6		
The mean daily range of temperature	10·2		
The greatest range of temperature in one day	14·9	29th	
	Per cent.		
The mean humidity of the month	89		
The average humidity of July from 24 years' registers ...	85		
	Inches.		
The mean vapour tension of the month	1·018		
The average vapour tension of July from 9 years' registers ...	1·002		
The mean cloud proportion of the month	8·32		
The average cloud proportion of July from 22 years' registers ...	7·94		
	Ins.		
The total rainfall of the month	21·47		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	20·13		
The average fall of July from 48 years' registers ...	12·84		
The greatest fall in 24 hours	4·12	7th	
	Days.		
The number of rainy days in the month	28		
The average number of rainy days in July from 24 years' registers	25		
The mean maximum equilibrium temperature of solar radiation during the month	⊖ 136·0		
The mean difference of sun and air temperatures	47·4		
The greatest sun temperature	152·7	4th and 5th.	
The greatest excess of sun over air temperature	60·3	4th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	78·2		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	0·5		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	2·4	1st and 18th.	
	Miles.		
The mean movement of the wind per day	100·7		
The greatest movement of the wind in one day	208·0	14th	
The greatest movement of the wind in one hour	15·0	14th, 11 to noon and 4 to 5 P.M.	

The number of hours with winds from each of the 8 points—
N. 17, N.E. 19, E. 22, S.E. 37, S. 151, S.W. 271, W. 142, N.W. 31, Calm 54.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·6° higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew Standard thermometer, which is the standard of reference at the present Observatory.

G. W. KUCHLER,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 7th August 1899.

Results of the Meteorological Observations taken at the Alipore Observatory from 30th July to 5th August 1899.

	Inches.
The mean pressure of the seven days	29·644
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·577
	Hours.
The total number of hours of bright sunshine	36·0
The maximum possible number of hours of sunshine	91·7
	°
The mean temperature of the seven days	85·6
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	82·9
The extreme variation of temperature	15·2
The maximum temperature	92·4
	Miles.
The highest velocity of the wind in one hour	10
	%
The mean relative humidity	87
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	87
	Inches.
The total fall of rain from 30th July to 5th August 1899	1·55
The average fall of the corresponding period for 24 years, Surveyor-General's Office	·39
The total fall from 1st January to 5th August 1899	52·37
The average fall of the corresponding period for 24 years, Surveyor-General's Office	37·00

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; t, thunder; d, drizzling rain; p, passing temporary showers; lr, lightning reflection.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 7th August 1899.

G. W. KUCHLER,
For Meteorological Reporter to the Govt. of India.

CALCUTTA, *the 2nd August 1899.*

H. STUART,
Examiner of Accounts.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

Approximate Return of Traffic for the week ended 22nd July 1899 on 1,712·25 miles open.

	Coaching Traffic.		Merchandise and Mineral Traffic.		Other earnings (estimated).	Total earnings.	Traffic Train-miles	
	Number of passengers.	Coaching receipts.	Weight carried.	Receipts.			Coaching.	Merchandise.
		Rs. A. P.	Mds. S.	Rs. A. P.	Rs. A. P.	Rs. A. P.		
	(a)	(b)		(c)	(d)			
Total traffic for the week ...	332,645	3,20,827 1 0	34,79,223 0	5,96,725 9 0	14,647 0 0	9,32,199 10 0	94,246	153,189
Or per mile of railway	.....	187 5 11	.....	348 8 1	8 8 10	544 6 10	.....	.....
For previous 2½ weeks of half-year	762,424	7,38,245 3 0	88,00,579 10	14,97,788 0 0	31,226 0 0	22,67,359 3 0	203,630	350,825
Total for 3½ weeks ...	1,095,069	10,59,072 4 0	1,22,79,802 10	20,94,513 9 0	45,873 0 0	31,99,558 13 0	296,866	515,014
Comparison.								
Total for corresponding week of previous year ...	310,863	2,89,030 15 9	35,45,114 20	6,98,008 9 4	26,733 9 8	10,13,773 2 9	88,991	155,469
Per mile of railway corresponding period of previous year ...	.....	169 8 2	.....	409 5 11	15 10 10	594 8 11	.....	.....
Total for corresponding 3½ weeks of previous year ...	1,021,861	9,78,515 9 11	1,27,39,694 30	24,34,323 7 9	69,633 0 8	34,82,472 2 4	297,742	528,684

(a) The increase is in outward traffic, chiefly from stations in A, C and D districts, on account of "Ooita Ruth Jattra" and movements of pilgrims and marriage parties.
(b) Deducted Rs. 28,756, being the estimated amount of rebate on coal for the week.
(c) The decrease is chiefly in upward coal from Giridih and in grain and seed traffic to Calcutta stations.
(d) Payments on account of mileage and demurrage being more than the receipts, nothing is included.

TARKESSUR BRANCH RAILWAY.

Approximate Return of Traffic for the week ended 22nd July 1899 on 22·23 miles open.

	Coaching Traffic.		Merchandise and Mineral Traffic.		Other earnings (estimated).	Total earnings.	Traffic Train-miles

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled under the provisions of the Indian Councils Acts, 1861 and 1892.

THE Council met at the Council Chamber on Saturday, the 5th August, 1899.

Present:

The Hon'ble SIR JOHN WOODBURN, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*
The Hon'ble NAWAB BAHADUR SYUD AMEER HOSSEIN, C.I.E.
The Hon'ble MR. W. B. OLDHAM, C.I.E.
The Hon'ble MR. R. B. BUCKLEY.
The Hon'ble MR. C. W. BOLTON, C.S.I.
The Hon'ble MR. E. N. BAKER.
The Hon'ble RAI DURGA GATI BANERJEA BAHADUR, C.I.E.
The Hon'ble MR. C. E. BUCKLAND, C.I.E.
The Hon'ble MR. F. F. HANDLEY.
The Hon'ble MR. F. A. SLACK.
The Hon'ble BABU JATRA MOHAN SEN.
The Hon'ble MR. T. W. SPINK.
The Hon'ble RAJA SHASHI SHAKHARESWAR ROY BAHADUR, OF TAHIRPUR.
The Hon'ble RAJA RANAJIT SINHA BAHADUR, OF NASHIPUR.
The Hon'ble SAHIBZADA MAHOMED BAKHTYAR SHAH, C.I.E.
The Hon'ble MR. D. F. MACKENZIE.
The Hon'ble MR. J. G. APCAR.
The Hon'ble DR. ASUTOSH MUKHOPADHYAYA, M.A., D.L., F.R.A.S., F.R.S.E.
The Hon'ble BABU BOIKANTA NATH SEN.
The Hon'ble BABU SURENDRANATH BANERJEE.

NEW MEMBERS.

The Hon'ble MR. BUCKLAND, the Hon'ble MR. HANDLEY, the Hon'ble MR. SLACK, the Hon'ble MR. APCAR, the Hon'ble DR. ASUTOSH MUKHOPADHYAYA, the Hon'ble BABU BOIKANTA NATH SEN and the Hon'ble BABU SURENDRANATH BANERJEE took their seats in Council.

THE LALBAG SUB-DIVISION.

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR asked :—

Has the attention of the Government been drawn to the inconveniences felt by the people residing within the jurisdiction of the old sub-division of Lalbag in the district of Murshidabad owing to the abolition of the said sub-division and to the transfer of the civil and criminal jurisdiction of the thanas of Kalaynganj, now called Nabagram, and Sagardighi to the Kandi and Jangipur sub-divisions respectively, and to the orders recently passed by the District Magistrate withdrawing the powers hitherto been exercised without interruption for over four years by the Honorary Magistrates of Lalbag authorized to sit singly to take cognizance of offences on complaints and Police reports? Has the Government any intention to restore the Lalbag sub-division, and, if not, will the Government be pleased to re-transfer the jurisdiction over the thanas of Nabagram and Sagardighi to the Lalbag civil and criminal courts and to appoint a City Magistrate at Lalbag, or to order the Magistrate of Murshidabad to cancel the orders above referred to?

The Hon'ble MR. BOLTON replied :—

"The Lieutenant-Governor took the opportunity of enquiring locally into the matter referred to by the Hon'ble Member during his recent visit to Murshidabad, and has come to the conclusion that the restoration of the Lalbag subdivision is the most suitable arrangement. Steps will accordingly be taken to re-establish the subdivision, with jurisdiction over the area formerly attached to it."

INCOME AND EXPENDITURE ON ACCOUNT OF ROAD CESS.

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR, said :—

Will the Government be pleased to lay on the table a statement showing the income derived from road cess and the expenditure incurred from that fund, item by item, in respect of the several districts of Bengal for every year from 1892-93 to 1897-98?

The Hon'ble MR. BAKER replied :—

"I lay on the table a statement showing the income from Road Cess in each district for each of the years 1892-93 to 1895-96.

"As regards expenditure 'incurred from that fund' the question is not clearly understood. Under section 109 of the Cess Act of 1880, the receipts from Road Cess, after payment of the costs of assessment and collection, are payable to the District Fund, and there is no expenditure incurred specifically against them.

"If the Hon'ble Member requires details of expenditure on public works incurred by District Boards, the figures will be collected, but the operation may take some time."

Statement of Road Cess Income and Road Cess Expenditure of the District Boards in Bengal from 1892-93 to 1895-96.

Name of District.	Receipts of Road Cess during the year, after deducting the cost of collection and revaluation.				Total Cess expenditure, *i. e.*, expenditure on objects included in section 109, Act IX of 1880, including repayment of loans with interest.

ROAD AND PUBLIC WORKS CESSES.

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR, said:—

Will the Government be pleased to furnish a statement showing the joint collection charges of the road and public works cesses for every year, from 1877-78 to 1898-99, and the amount of costs borne by the District Boards and the Provincial Revenues, respectively?

The Hon'ble MR. BAKER replied:—

"I lay on the table a statement giving the information asked for, so far as it is available. For the first two years, 1877-78 and 1878-79, the amount debited to Local Funds was not shown separately and the figures cannot now be furnished. The figures for 1898-99 are not yet fully available.

"The statement below shows the collection charges of the Road and Public Works Cesses:—

	Total charges for collecting Road and Public Works Cesses.	Amount debited to Government.	Amount debited to District Funds.
	Rs.	Rs.	Rs.
1877-78 ...	.....	10,270	.....

OUTRAGES ON WOMEN IN MYMENSINGH.

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR asked:—

Has the attention of the Government been drawn to the reports which appeared in the *Indian Mirror* of the 22nd June last and the *Hitabadi* of 13th, 20th and 27th *Jaista* 1306 B.S. and other newspapers regarding the outrages and assaults on women in the district of Mymensingh, and will the Government be pleased to state what steps, if any, it has taken in the matter?

The Hon'ble MR. BOLTON replied:—

"The statements which appeared in the newspapers attracted the notice of the Government and reports were called for from the Magistrate of the district and the Commissioner. There has been no marked increase in offences against women during the present year, but many cases have occurred in recent years, the crime having been prevalent in the district for a very long period. During both Sir Charles Elliott's and Sir Alexander Mackenzie's administration orders were issued to ensure more effective investigation of cases and prosecution of offenders. The Police have not since been remiss, and many convictions, accompanied by heavy sentences, have been secured. These punishments have presumably not been without effect on the bad characters, but further special action appears necessary. The Lieutenant-Governor has accordingly sanctioned the deputation of Special Police Inspectors to the district, to assist the ordinary Police. These officers will take up all serious

cases reported, and the detection of crime will, it is hoped, be more prompt and effectual. They will also be utilised for enquiries as to the propriety of proceedings against desperate and dangerous characters under section 110 (*f*) of the Code of Criminal Proceedure."

WATER-SUPPLY IN THE MUFASSAL.

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR asked :—

Will the Government be pleased to lay on the table a statement, district by district, showing the amount spent on account of the water-supply in the mufassal and the number of wells and tanks excavated and re-excavated for the last 5 years?

The Hon'ble MR. BAKER replied :—

"I will lay on the table a statement showing the amount spent on water-supply by District Boards and Municipalities during the five years 1893-94 to 1897-98. The other figures asked for by the Hon'ble Member are not available."

SALARIES OF MINISTERIAL OFFICERS.

The Hon'ble BABU JATRA MOHAN SEN said :—

Having regard to the sympathetic views entertained towards the ministerial officers by the Government, may I be permitted to ask whether the Government may be disposed to grant annual increment to the salaries of the ministerial officers, who are allowed under the present rules biennial increments? This arrangement, I venture to suggest, will not probably effect any appreciable alteration in the budget statement.

The Hon'ble Mr. BAKER replied :—

"The views of this Government regarding the salaries of ministerial officers have been expressed on several occasions in this Council, and were stated again during the last budget debate. It has already been explained that the sanction of the Government of India is required under the rules before any general measure of the kind contemplated can be undertaken. Subject to such sanction, it is the Lieutenant-Governor's desire to take up the question when financial conditions permit: but His Honour does not consider that the conversion of biennial into annual increments would be an appropriate or economical method of dealing with it."

STATEMENT AS TO THE COURSE OF BUSINESS.

THE Hon'ble the PRESIDENT said :—"Gentlemen of the Council,—The first item on the list of agenda to-day is a statement—and it shall be a short statement—by the President as to the legislative business that will come before the Council during this session. It is probable that later on in the session a Bill will be brought before you for consideration in regard to the appointment and remuneration of the establishment of Civil Court amins. That will be a short and simple Bill. Otherwise your time will be absorbed by the great and engrossing discussion regarding the Calcutta Municipal Bill. Under ordinary circumstances it would have been our duty to-day to commence the discussion upon the Report of the Select Committee which presented its opinions last April. As you all are aware, there has been received from the Government of India a grave and important despatch, in which the Government of India convey to us their opinion that there should be a material alteration in the constitution of the Corporation of Calcutta. My answer to that as Lieutenant-Governor of Bengal is in your hands. To that answer I have nothing to add, and from that answer I have nothing to retract. It is now the business of the revived Select Committee to consider the recommendations which have been made to it by the Government of India. The Select Committee will be re-constituted to-day, and it will be its business to go through the draft prepared by the Select Committee of April and to determine in what way changes are necessary to give effect to the views of the Government of India."

CALCUTTA MUNICIPAL BILL.

THE Hon'ble MR. BAKER moved that the Hon'ble Mr. MACKENZIE and the Hon'ble MR. APCAR be added to the Select Committee on the Calcutta Municipal Bill.

The Motion was put and agreed to.

The Hon'ble Mr. BAKER also moved that the Hon'ble BABU SURENDRANATH BANERJEE be re-appointed to the Select Committee on the Calcutta Municipal Bill.

The Motion was put and agreed to.

The Hon'ble MR. BAKER also moved that the Calcutta Municipal Bill be referred back to the Select Committee for further consideration, with reference to the correspondence between the Government of India and the Government of Bengal, which was published in the Supplement to the Calcutta Gazette of the 12th July, 1899, and with instructions to report within two weeks. He said :—

"The object of this motion is to enable the Select Committee to consider the views expressed by the Government of India in their letter No. 93 of the 17th June last, which have received the acceptance of the Local Government.

"After the remarks that have fallen from His Honour the President, it is not necessary for me to enlarge upon the proposals put forward by the Government of India. Those proposals and the reasons for them have been before the Public since the 12th of last month, and are no doubt familiar to all Members of this Council. They are four in number. Firstly, it is proposed to reduce the number of Ward Commissioners from 50 to 25, so that the Corporation shall consist of 50 Commissioners, of whom one half are elected at ward elections and one half are appointed by Government or nominated by special constituencies. This plan follows generally the model of the Bombay Corporation. Secondly, it is proposed to follow the same model in respect of the constitution of the General Committee, and to provide that of the total number of 12 members, eight shall be elected by the entire Corporation and four shall be appointed by Government. Thirdly, it is proposed to enact provisions to secure that the proportion of the General Committee which is to be elected by the entire Corporation, shall be a strictly fair and proportionate representation of the constituents of the electoral body. And fourthly, it is proposed to lay down rules for the appointment of Special and Sub-Committees which shall secure their being truly representative.

"These proposals, if adopted, will involve comparatively few changes in the Bill as now amended, and the Select Committee should have no difficulty in coming to a decision upon them within the time allowed.

"There is, however, another point as to which I wish to say a few words; for although it arises directly out of the proposals of the Government of India, it is not expressly mentioned in the correspondence. I refer to the initial arrangements for constituting the first body of Commissioners under the new Bill. It will be within the recollection of Members that the Select Committee proposed that the 25 Commissioners appointed by Government or nominated by the Chamber of Commerce, the Trades Association, and the Port Trust should all vacate their seats on the 1st April, 1900, the date on which it is expected that the Bill will come into force: but that, at the instance of the members representing the Corporation, it was provided that the 50 elected Ward Commissioners under the present Act should retain their seats until 1st April, 1901, the date up to which they would have been entitled to sit if there were no change in the law. This arrangement was urged upon us with a view to avoid the trouble and expense of holding a fresh general election in advance of the usual date. As the original Bill proposed no change in the number of the Commissioners, there seemed no good reason why the wishes of the representatives of the Corporation should not be acceded to: and for this reason the Select Committee agreed to adopt them.

"But if, in accordance with the views of the Government of India, it is now decided to reduce the number of elected Commissioners to 25, it is no longer possible to allow the old Ward Commissioners to retain their seats when the new Act comes into force. They will have to vacate their seats, like the nominated Commissioners, and arrangements must be made to constitute an entire new body of Commissioners, who shall hold office from 1st April, 1900. As regards the nominated Commissioners, there is no difficulty. The Bill already provides for their appointment in advance of the necessary date, and no change is required. But as regards the elected Commissioners the matter is less simple. We cannot hold an election under the new Act in advance of the due date, because under the Bill changes have been made in the procedure for holding elections. The preparation of an election-roll has been made compulsory, and the compilation of this must be taken up in the month of September preceding the elections. These conditions could not, for obvious reasons, be carried out in respect of the first general election if that is held before the Act comes into general operation. It has accordingly been suggested that the first general election should be held in March, 1900, under the provisions of the present Act of 1888, with the proviso that each ward shall elect only one Commissioner instead of two; and each Commissioner so elected shall hold office under the new Act, from the 1st April, 1900, for the usual term of three years. This is the solution of the difficulty which commends itself to Government as at present advised, and it will be laid before the Select Committee, with a view to the necessary amendments being made in the Bill. Government, however, does not desire to bind itself to this plan, and if any Member has a better solution to offer, it will be open to the Committee to consider it."

The Hon'ble MR. APCAR said:—"I crave the indulgence of the Council, which I am sure will be extended to me by yourself, in consideration of the circumstance that I appear here for the first time to-day, and because of the present juncture relating to the great and engrossing subject which Your Honour has referred to, namely, the Calcutta Municipal Bill.

"If I am in order, I desire to explain, in order that I may not be put into a false position, the reason why I ask for an adjournment of the Council to enable me to prepare myself to represent the interests I have come here to represent. Your Honour is aware that there have been circumstances that delayed my appointment as a Member of this Council being made, and as a matter of fact it was not made until the 18th July last. I could not be expected before my appointment was made to begin to prepare myself for the consideration of the subjects to be brought before this Council. I have found that my attention has been required to be given to an overwhelmning mass of material which has occupied my time wholly. I have been most anxious to learn what the course of business at this meeting would be, but I have for various reasons which are known to you, Sir, wholly failed to learn anything with certainty until Thursday last; and therefore I could not, I dared not, stop my study of the subject as a whole to give my mind to the preparation of any particular matter. I do not seek to attach blame to any one for my being left uninformed as to the business to be brought forward. I certainly have not, on my part, been remiss in any way, and the fact remains that I tried my best and I received no notice of the business until very lately. And, lastly, my attention was drawn to certain points of detail in the Bill which I have not had time to consider, but to which I have thought that I ought to give my attention with the view of proposing amendments to help the Council. That distracted my attention and threw me back, and I am now in the position that I have not got the papers I require and I am not prepared. If Your Honour desires that I should go on, I shall do so; but I shall be better able to do so if I am allowed an extension of time, and I shall be glad if you, Sir, will see your way to postpone the further consideration of the matter now before the Council to next Saturday. I leave myself entirely in your hands, feeling sure that every consideration will be shown to me, and that Your Honour will do what is right under the circumstances."

The Hon'ble the PRESIDENT said :—"Gentlemen,—I think it would be the wish of all of you that every reasonable consideration should be given to any Hon'ble Member of this Council, particularly to a newly-joined Member, who has described the difficulties of his position in the very feeling language in which the Hon'ble Mr. Apcar has described his difficulties to you. But I venture to think that the question upon which he and other Hon'ble Members of this Council wish to address us is, after all, however grave, not a very complicated or difficult subject. The issue before us at this moment is simply the proposal of the Government of India as to the alteration in the constitution of the Corporation. These are, as I have said, grave matters in which we are all deeply interested, and upon them there are very strong and differing opinions. But the issue is not one which requiries great study or extremely elaborate application. And therefore I think it will meet all purposes of Hon'ble Members of this Council if, in order to give time to finally prepare themselves upon an issue of this description, I adjourn the Council till Monday. The Council is accordingly so adjourned."

The Council adjourned to Monday, the 7th August, 1899.

CALCUTTA ;
The 15th August, 1899.

F. G. WIGLEY,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

RESOLUTION ON THE ANNUAL REPORTS ON THE ALIPORE AND HAZARIBAGH REFORMATORY SCHOOLS FOR THE YEAR 1898.

No. 483P.—D.

POLITICAL—(Jails).

Dated Darjeeling, the 6th July 1899.

RESOLUTION.

READ—

Letter No. 4306, dated 26th April 1898, from the Inspector-General of Jails, submitting the Annual Reports on the Alipore and Hazaribagh Reformatory Schools for 1898.

Read also—

The Reports for the years 1897 and 1896, and the orders of Government recorded thereon.

The Report on the Reformatories for the year 1898 was received from the Inspector-General of Jails in print on the 23rd May.

2. The two institutions had, on the last day of 1897, 554 inmates, of whom 212 were at Alipore and 342 at Hazaribagh. The number of boys who were released, or transferred, or who died or escaped was 178, and the admissions were 92; the total number remaining at the end of the year being thus 468, of whom 194 were at Alipore and 274 at Hazaribagh. Of these, 304 were Hindus and 148 Muhammadans; 15 belonged to aboriginal tribes, and 1 was a Native-Christian. The admissions during the year fell off largely, the figure for the previous year being 167 and the average for the five preceding years 135. The decrease was presumably due in a large measure to the use by Magistrates of the provisions of section 31 of Act VIII of 1897. Information on the subject is not, however, available, and the Commissioners of Divisions will be requested to furnish it in future, for incorporation in this report. It is expected that, under the provisions just mentioned, the annual admissions into the Reformatories will be substantially reduced. Rules were issued, under the Act, in February last, defining what youthful offienders should be sent to the Schools by the Courts and regulating the periods of their detention. The number of releases from the institutions was considerably in excess of admissions, including the cases of 40 young boys whom the Government thought it desirable to release under section 14 of the Act, on account of their extreme youth. The Lieutenant-Governor will be obliged if the Commissioners will examine the records in recent admissions to see whether there are cases which might have been more suitably disposed of under section 31. The daily average number of boys was 203·98 at the Alipore School and 311·16 at the Hazaribagh School, as compared with 189·89 and 344·04 respectively in 1897. The general health of the boys was good, although there was an increase, as compared with the previous year, both in the number of admissions to hospitals and in the average number of sick, due, at Alipore, to epidemics of chicken-pox and influenza, and, at Hazaribagh, to an increase in cases of intermittent fever.

3. *Offences, Punishments, and Marks.*—The total number of offences recorded at Alipore was 217 against 222 in the previous year, and at Hazaribagh 173 against 248. In all, 95 boys, or 46 per cent. of the daily average number of inmates, were punished during the year at Alipore, and 111 or 36 per cent. at Hazaribagh. The Inspector-General reported on the marked divergence in regard to offences and punishments between the two schools which the Lieutenant-Governor commented on in the Resolution on the Report for 1897. The returns showed a continuous decrease in offences at Hazaribagh against a continuous increase at Alipore, and a much higher proportion of "serious" offences, with fewer punishments for such offences at Hazaribagh than at Alipore. The Inspector-General explained that the high proportion of "serious" offences at Hazaribagh was due to thefts of fruit in the garden and attempts to damage looms and otherwise obstruct the new industry of blanket-weaving which was then being introduced, and that the personal influence of Mr. Hill, who has had charge of the Reformatory for many years, probably enables him to maintain discipline with fewer punishments. The matter is

not of practical importance, as the Lieutenant-Governor is satisfied that there is no laxity in the management of either School, but the Inspector-General will probably be able to ensure a more uniform classification of offences for the future. Marks for good conduct were earned by 172 boys or 84 per cent. at Alipore, and by 295 boys or 90 per cent. at Hazaribagh. Marks are awarded weekly and entitle the boys to a small money gratuity, half of which may be spent in small luxuries, such as fruits and sweetmeats, while the other half is placed in the Post-office Savings Bank for the benefit of the boys on their release. The advantage of earning marks being thus immediately apparent is said to be well understood and appreciated.

4. *Instruction and Gymnastics.*—The only change made in the educational system during the year was the discontinuance at Hazaribagh of night school from 6 to 7-30. The Superintendent found that little good resulted from it, and the difficulty in maintaining discipline among the boys while doing their lessons at that hour in a bad light was great. Night school was abandoned at the Alipore Institution in 1897 for similar reasons. Both the Reformatories were visited by the Inspector and Deputy Inspector of Schools of their respective circles. The teaching of drill and gymnastics is reported to have been continued during the year with good effect. At Alipore sports were occasionally held on holidays, and the boys competed for small prizes. The trades taught at Alipore were the same as in the previous year, viz., carpentry, book-binding, cane-work, blacksmith's work, gardening, tin-work, and printing. At Hazaribagh shoe-making and tin-work were discontinued, owing to failure to obtain work to employ the boys engaged in them. Blanket-weaving was also discontinued. The trades remaining are weaving, tailoring, carpentry, blacksmith's work, and gardening. The question of the proper training to be given to the boys at the Reformatories has engaged the Lieutenant-Governor's attention. The results of the enquiries made as to the occupations followed by the boys after their release, as stated in the next paragraph, show a fair proportion of the boys actually earning a living, but very few, indeed, making use of the training which they received at the Schools. The caste system is a serious impediment in the case of Hindu boys, but more of the Muhammadan boys ought to be found employed in the trades taught to them. It is clear that more endeavour must be made to adapt instruction to the hereditary occupation of the boys, and more systematic efforts to obtain employment for them on their discharge. Only then can it be hoped that the instruction given at the schools will result in equipping a larger proportion of the boys for earning a livelihood in after-life. The pursuit of profit in the Reformatory industries is a most laudable object, but it can be carried too far. The first and essential object is to teach boys their own trade, as a trade they are likely to follow on discharge if they are not incorrigibly idle or vicious. The variety of instruction will cost money, but the money must not be grudged. A separate communication will be addressed to the Inspector-General on this subject. He has already interested himself in finding employment for boys taught weaving at Hazaribagh, and the thanks of the Government are due to Mr. Mehta, C.I.E., proprietor of the Empress of India Mill and a member of the Board of the Alipore Reformatory, for consenting to give a trial to some of these boys at his mill on their discharge. Five boys have recently availed themselves of the opportunity thus offered to obtain suitable employment.

5. *Character and occupation of released boys.*—Of 66 boys discharged from the Alipore School in 1897, 41 were reported to be well conducted, 17 could not be traced, 6 were in jail, 1 was looked on as a suspicious character, and 1 had died. Of 72 boys released from the Hazaribagh School, 27 were well conducted, 7 not traceable, and 5 in jail, 5 were viewed with suspicion, 1 had died, 5 had emigrated to other districts, and 22 were not reported on. The failure to obtain information regarding many of the boys released from this institution was noticed last year, and it should not have recurred. The Inspector-General of Jails is requested to draw the Superintendent's special attention to the point, and to insist on complete reports being punctually submitted in future. The employment of the police to make these enquiries will be discontinued. The boys are likely to be less disposed to evade

information as to their residence after release if another agency were employed, and the services of educational inspecting officers and members of village panchayats, as well as of private persons of respectability who may be willing to give their assistance, will be utilised. In the letter from the Home Department, No. 424, dated the 15th September 1898, the Government of India directed that in future annual reports a statement should be furnished showing the industries followed by the boys at present in the schools and by boys after release, contrasting the numbers following agricultural with those following other pursuits. Neither of the school reports gives details as to the number of boys under detention following each of the trades taught. Information on this point is, however, furnished by the Inspector-General of Jails in his forwarding letter. The reports contain a statement showing the occupation of boys after release, but the information regarding those following agriculture is not precise. The head under which the largest number of released boys is shown is that of labourers. A proportion of these is probably engaged in field operations, and in future those so employed should be shown under the head of agriculture. Of the boys discharged in 1897 from both schools (138), only 8 are shown as following the trades taught to them. Of the rest regarding whom information was obtained 63 were in employment of some kind.

6. *Manufactures.*—The financial results of the manufactures in the schools show a net profit at Alipore of Rs. 9,862-9-6 against Rs 7,098-8-8, and at Hazaribagh of Rs. 9,268-15-2 against Rs. 5,960-0-1, in the previous year. The profit per head of the number employed was Rs. 54-12-8 against Rs. 42-9 in 1897 at Alipore, and Rs. 35-10-4 against Rs. 25-7-7 at Hazaribagh.

7. *Financial.*—The total cost of the Alipore Reformatory was Rs. 22,662-15-7, and of the Hazaribagh Reformatory Rs. 22,738-1. The cost per head for each boy was Rs. 110-9-5 at the former school and Rs. 73-0-11 at the latter, against Rs. 119-5-3 and Rs. 71-5-2 respectively in 1897. The increased cost per head at Hazaribagh was mainly due to a large issue of new clothing to the boys and the heavier incidence per head of establishment charges on a smaller number of boys.

8. *General.*—One boy was admitted from Assam during the year. With a view to allow of transfers as a means of maintaining discipline among the guard, orders were issued towards the end of the year sanctioning the amalgamation of the three lowest grades of warders at the Hazaribagh Reformatory with the warder establishment of the Central Jail of that place. The desirability of a similar change at Alipore is under consideration. Sanction was also granted to the renewed entertainment of a Civil Hospital Assistant for the Hazaribagh School. On the reduction of the Hazaribagh Jail from a Central to a District Jail, it was arranged that one of the Civil Hospital Assistants attached to the Jail should also attend on the Reformatory boys, and the appointment of a special medical officer for the school was dispensed with. The increase of work in the Jail, consequent on its reconversion into a Central Jail, necessitated the renewal of the separate appointment for the Reformatory. The number of visits to the Alipore School paid by members of the Board of Management was 39 against 37 in the previous year. At Hazaribagh 10 visits were paid by members of the Committee against 5 in 1897. Captain Maynard succeeded Captain Nott as Superintendent of the Reformatory during the year, and has submitted the report on that institution.

ORDER.—Ordered, that a copy of the Reports and a copy of the Resolution be forwarded to the President of the Board of Management of the Reformatory School at Alipore, for information and for communication to the members of the Board.

Ordered, also, that a copy of the Reports and a copy of the Resolution be forwarded to the Inspector-General of Jails, for information and for communication to the Superintendent of the Hazaribagh Reformatory School.

Ordered, also, that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Chief Secy. to the Govt. of Bengal.

RESOLUTION ON THE FINAL REPORT OF THE SETTLEMENT OF THE JAIPUR GOVERNMENT ESTATES.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 10th August 1899.

RESOLUTION—No. 2712.

READ—

The Final Report on the settlement of the Jaipur Government Estates.

Read also—

Letters No. 423A., dated the 9th May 1899, from the Board of Revenue, No. 490S., dated the 14th March 1899, from the Director of Land Records, and No. 1207, dated the 27th October 1898, from the Commissioner of the Rajshahi Division, and a Note by the Collector of Bogra, reviewing the Report of the Settlement Officer.

THE Jaipur Government estates, with an aggregate area of 44·1 square miles, are comprised in 153 villages, lying a few in the district of Rajshahi, the rest in that of Bogra. Of some of these villages Government is sole proprietor, in others it has a separate share, and in the remainder it is a joint proprietor. The tract, which is well watered, and has a fertile soil, and a rainfall generally sufficient for purposes of agriculture, appears, from ruins and other evidence, to have been at one time populous and flourishing; but, owing to a change in the course of the rivers, it became malarious and partly depopulated, and dense jungle is still to be found in many places. The construction of the Northern Bengal State Railway, which runs through the estates, the making of new roads, the establishment of new markets, and the general rise in the value of agricultural produce, have brought about a marked change for the better. While formerly settlers had to be attracted by low or nominal rents and advances of money, and were ready to throw up their holdings if the slightest increase in the rent was proposed, there is now an immigration of cultivators from other districts, and a consequent demand for land.

2. The Government estates were originally eight in number, seven of which were purchased by Government at revenue sales, between 1828 and 1837 A.D., for nominal sums, as neither the owners nor any one else would hold the lands at the revenue fixed. They were let out to farmers, who held them up to 1878, when direct management was introduced on the completion of a settlement made for 15 years. The remaining estate escheated to Government in 1882. In 1894 the eight estates were by amalgamation reduced to two, in order to obviate much unnecessary work.

3. A resettlement under the Bengal Tenancy Act was ordered in January 1893. As the maps of 1878 were imperfect, and as the record-of-rights had not been kept up to date, a fresh survey and record-of-rights was considered necessary. The survey was begun by a professional party in February 1893, and was completed in June 1894. The Settlement Officer first appointed joined on the 9th February 1894, when the cadastral survey with initial record-writing was in progress; but proving incompetent was removed in August following. In November 1894, Babu Sarat Chandra Das, Deputy Collector, was appointed Settlement Officer, and was in charge of the operations till the 17th of June 1896, except for a short interval in the recess of 1895. This officer was another unfortunate selection, for during his long tenure of office he did very little; and much of what he did had to be done over again by his successor, Mr. Sorab S. Day, who was obliged to re-attest 91 of the 121 villages dealt with by his predecessor. The work was not finished till February 1898.

4. In the villages in which the Government lands are mixed up with private estates, attestation was difficult, as neither the tenants nor the agents of the private proprietors had any idea of the estates to which particular plots of land belonged; and it was therefore necessary to make a comparison, plot by plot, between the present maps and records and those of 1878. The subsequent proceedings in these villages also appear to have given much trouble; and it is evidently a desirable conclusion that application be

made for the partition of kismut Saguna, to which the joint tenures are confined. This should be effected as speedily as possible.

5. Proceedings under section 103 of the Bengal Tenancy Act having been sanctioned by the Board of Revenue, on applications made by the landlords concerned, in respect of the principal private estates whose lands are interlaced with the Government estates, the survey and record-of-rights embraced the whole area of the 153 villages in which the Government lands lie. The area of the whole tract surveyed is 34,558 acres, or about 54 square miles, of which 28,233 acres, or 44·1 square miles, belong to Government, and the remaining 6,325 acres, or 9·9 square miles, to private proprietors. The following table compares the results of the present and the previous survey in respect of the Government estates:—

	Total settled area.	Unsettled area, including waste.	Total area.
	Acres.	Acres.	Acres.
Previous survey	18,343	9,794	28,137
Present „	22,223	6,010	28,233

The apparent increase in the total area of the estates by 96 acres is attributed to the greater accuracy of the present survey made by the plane-table, as compared with the prismatic compass survey of 1878. Statistics as to the cultivated area in 1878 not being available, it is not possible to ascertain exactly the increase in cultivation since the last settlement; but there has been an increase of 3,880 acres, or about 21 per cent., in the settled area, which approximately represents the increase in cultivation.

6. In the whole area surveyed, the extent under crops was found to be 21,307 acres, of which 7,869 bore two crops in the year. Winter rice occupied 11,007 acres, or 37·7 per cent., of the total of 29,176 acres, and *bhadoi* or autumn rice 6,366 acres, or 21·8 per cent. Jute was found to be the next most important crop of the tract, occupying, as it did, 4,187 acres, or 14·3 per cent.; but the recent rise in the price of rice and the coincident fall in that of jute has had the effect of bringing under rice much of the land formerly sown with jute. There are over a thousand acres of sugarcane.

7. The following table shows the several classes of tenants in the Government estates, the areas held, and the rents payable by them as now assessed:—

Class of tenant.	Number of holdings.	Aggregate area held by each class.	Average area per holding.	Rent payable according to present settlement.	Average rent per acre.
1	2	3	4	5	6
		Acres.	Acres.	Rs. A. P.	Rs. A. P.
1. Istimrardars ...	41	1,022	24·92	547 14 8	0 8 6
2. Rent-free holders ...	93	738	7·93	.. ...	.....
3. Settled raiyats paying rents to Government.	4,232	16,168	3·82	50,520 10 3	2 7 6
4. Non-occupancy raiyats paying directly to Government.	1,467	4,294	2·92		
Total ...	5,833	22,222*	.....	51,068 8 11	.....
Settled raiyats under istimrardars.	326	566	1·73	1,370 0 0	2 6 9
Settled raiyats under rent-free tenure-holders.	441	600	1·36	1,050 0 0	1 12 0
Under-raiyats of raiyats paying rent to Government.	3,767	3,611	·96	13,081 0 0	3 10 0

* The difference of one acre between this and the total settled area is not explained in the final report, but is trifling.

The *istimrardars* are holders of tenures granted in perpetuity at a fixed rent, some of them before the Permanent Settlement. The rent-free tenures are of three kinds, viz. :—

(1) *Brahmottar* tenures, or lands granted for the support of Brahmins ;
(2) *Pirpal* tenures, or lands granted for the performance of rites at the tombs of *pirs* or Muhammadan saints ;
(3) *Niskar* tenures, or small plots of land granted by Government to the khas mahal raiyats for the purpose of excavating tanks.

8. Transfers of raiyats' holdings were formerly unknown, as, for reasons briefly explained in paragraph 1, lands were not considered of much value. Owing to the change that has since taken place, cultivators' rights are now valuable ; and the custom of transferring them by sale, without seeking the permission of the landlord, has grown up. It is stated that the Manager of the Government estates has avoided the open recognition of this practice by causing the vendor to file a written relinquishment and then settling the holding with the purchaser. In spite of this, however, the Settlement Officer found numerous instances where even this formality had been dispensed with ; and he entered the new tenants in his records. Care must be taken to see that the splitting up of holdings is not allowed.

9. The number of under-raiyats holding lands under the Government raiyats is large, being 3,767. This is stated to result from a practice, prevalent among the raiyats of the Jaipur estates, of holding lands under each other. It is stated that the raiyat-landlords do not stand on ceremony in ousting their under-raiyats, who can acquire no occupancy-rights, as there is no custom in their favour. There would, however, appear to be no reason why these under-raiyats should not enjoy the measure of protection afforded them by the provisions of the Bengal Tenancy Act ; and it is desired that the local officials will endeavour to enforce an observance of the law so far as lies in their power.

10. At the time when the Government estates were let in farm there were very few raiyats, and the farmer found it necessary to settle the lands practically for what he could get, whereby great inequalities resulted in the rents. In 1865 an attempt was made by him to introduce a scale of rates : but the raiyats would not agree, and were prepared to relinquish their holdings ; and at last the farmer had to accept whatever they chose to pay. At the settlement of 1878 the attempt was repeated by the Settlement Officer ; but the raiyats again refused to pay the new rents, and an addition of from 1 anna to 4 annas in the rupee to the existing rent was made by compromise, the exact increase being a matter of bargain in each case. This arrangement caused greater inequalities of rent than ever. In 1882 Mr. D. J. Macpherson, who had been deputed in connection with the Tenancy Bill to enquire and report on the practicability of framing tables of uniform rates in these estates, found that there was still greater competition among landlords for raiyats than among raiyats for land, and came to the conclusion that any attempt to introduce rates based on soil classification would probably fail.

Under these circumstances it was found, as was indeed to be expected, that each raiyat was paying a specified rent for a specified area of land without reference to the capabilities of the soil, and that the incidence of rent was very unequal. A further development of the country had, however, taken place since the date of Mr. Macpherson's report, and it was decided that an endeavour should again be made to equalise the incidence of the rents. The Settlement Officer describes the principle of the assessment in the words of the Commissioner. He says he was directed to take the more highly-assessed holdings as the standard and then to level up to these the rates of rent of the other holdings. As the description stands, it would certainly be understood that a uniform rate of rent was imposed on all tenants. It is abundantly clear, however, from the Settlement Officer's papers that nothing of the sort was intended, and nothing of the sort was done. What was meant was that, below a certain maximum of existing rent-rate, there should be drawn up a series of lower rates, graduated according to soil or other agricultural advantages. This was in fact suggested by some of the raiyats themselves, who strongly protested against an all-round addition to the existing rents, such as

was made in 1878. The legal basis of enhancement applicable was that of the rise in prices since the former settlement, and this, it appeared from careful enquiries independently made by the Settlement Officer and the Manager of the estates, admitted of an increase of 8 annas in the rupee, or 50 per cent. The lands were classified as follows:—

(1) *Bastu* or homestead lands which, in accordance with the custom prevailing in the tract, were to be most highly assessed.

(2) Cultivated lands, which were divided into high and low lands, the latter being the better class of the two. Each class was sub-divided, according to the local practice, into *aul* (first class), *daim* (second class), *chhaim* (third class), and *chaharam* (fourth class). First-class high lands included lands bearing thatching grass or bamboo clumps.

(3) Fallow and waste.

For the purpose of determining the new rates, the several villages were divided into seven groups, each group consisting of villages which showed a similarity in the average of the existing rents paid by the group of raiyats paying the highest rents. A separate scale of rates for each group was then worked out, subordinate to this maximum, for the several classes of soil in the group. These rates ranged from two rupees to eight annas per acre in the best groups; from one rupee to four annas in the poorest. The rates so determined were applied to holdings paying the lower rent-rates. If the resulting rent was less than the existing rent of the holding, the latter was taken; but if it was greater than the existing rent, *plus* an enhancement of 50 per cent., *plus* a fair rent for any excess area, it was reduced to the total thus obtained. In assessing excess areas, a deduction of 5 per cent. of the entire area of the raiyat's holding was made as a concession to possible errors in the measurement of his lands at the previous survey; and the rate of rent generally imposed on the excess area thus determined was that fixed for second-class low lands as being the average of the scale of rates determined for the group. On this method, the existing rents of 1,335 out of the 5,699 Government raiyats have been retained, and those of 3,691 raiyats enhanced. The remaining 673 raiyats were found in possession of unsettled lands for which fair rents were settled. As many as 5,044, or 88·5 per cent., appeared before the Settlement Officer and accepted the rents assessed. The rents of 655 raiyats were settled *ex-parte* on their failure to attend. There was no suit under section 106 and no appeal to the Special Judge. The Lieutenant-Governor is pleased to find that suitable rates of rent based on a classification of the soil have at last been introduced in these estates, and that this has been achieved at the instance, and with the general approval, of the raiyats themselves.

11. The total rental of the estates, as finally settled in 1878, was Rs. 38,358, which was found to have increased, owing to the settlement of waste lands, to Rs. 39,872 in 1893-94, when the settlement operations began. The new rental being Rs. 51,068, there has been an increase of Rs. 11,196, or about 28 per cent., over the rental of 1893-94. The increase over the rental fixed in 1878 amounts to Rs. 12,710, or about 33 per cent., out of which 21 per cent. appears to be due to the increase in the settled area since the last settlement, and 12 per cent. to the increase in the rates of rent based on the rise in prices. The collections under the new arrangements have, so far, been very satisfactory, and the Lieutenant-Governor sees no reason to question the opinion that the assessment, if tardily, has been fairly done. Government also derives a fluctuating revenue from ferries, fisheries, tolls at markets, sales of trees, and permits for collecting honey; but the details and total amount of this income have not been stated in the report.

12. For the whole area dealt with, including private estates (34,558 acres), the cost of the survey amounts to Rs. 12,773-8-3, and that of settlement to Rs. 33,350-11-1, the incidence of cost per acre being—

	Rs.	A.	P.
Survey	0	5	11
Settlement	0	15	5
Total ...	1	5	4

The cost has been excessive owing mainly to the bad work done by Babu Sarat Chandra Das, whose conduct has been separately dealt with. Out of the total cost of Rs. 46,124-3-4, Rs. 6,728 have been apportioned to the private proprietors.

13. The Lieutenant-Governor confirms the Board's action in fixing the term of the present settlement at 20 years from the 1st April 1898, the date on which the new rents came into force.

14. The rents are payable in two kists—6 annas in September and 10 annas in March. The Settlement Officer, agreeing with the Manager of the estates, recommends that the two kists should be equal, or 8 annas each. The Lieutenant Governor wishes to be informed of the result of the further enquiry which the Board intend to make in order to ascertain whether the raiyats would agree to such an arrangement, and awaits the Board's recommendations as to the maintenance of the settlement records.

15. The Lieutenant-Governor agrees with the Board in thinking that much credit is due to Mr. Sorab S. Day for the manner in which he has brought the settlement operations to a conclusion; but he is compelled to record his great regret at the absence of supervision in 1894—96, which resulted in so small an undertaking being so grievously delayed. The acknowledgments of Government are also due to the Manager of the estates, Babu Annada Nanda Sen, for the efficient help given by him throughout the proceedings.

ORDER.—Ordered that this Resolution be published in the Gazette and that a copy of it be forwarded to the Board of Revenue, Lower Provinces.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE FINAL REPORT OF THE SETTLEMENT OF CHARS LAKHI AND BADU IN THE DISTRICT OF NOAKHALI.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 11th August 1899.

RESOLUTION—No. 2716.

READ—

The Final Report on the Settlement of Chars Lakhi and Badu in the district of Noakhali.

Read also—

Letters No. 540A., dated the 8th June 1899, from the Board of Revenue, No. 537S., dated the 20th March 1899, from the Director of the Department of Land Records and Agriculture, and No. 281S., dated the 8th December 1898, from the Collector of Noakhali, reviewing the Report.

In August 1896 orders were passed for the settlement of five Government estates in the district of Noakhali under the provisions of Chapter X of the Bengal Tenancy Act, the survey being made by the professional Survey Department. Three of these estates are small and the final reports relating to them have been disposed of by the Board. For the remaining two, Lakhi and Badu, a single report has been rightly submitted, for they are adjoining alluvial formations of the same character and entirely owned by Government. The Director of Land Records has suggested that for the future the two estates, which have always been similarly treated, should be amalgamated for purposes of settlement and collection of Government revenue; and the Board have called for reports from the Collector and Commissioner. It is desired that the decision of the Board may be communicated to Government.

2. The two estates in question are chars lying off Sandwip, and probably of later formation than that island. They front the sea, and are exposed to the diluviating action of the tides. At the last census the people numbered 3,764, the majority being Muhammadan. In spite of their litigious disposition they are exceedingly prosperous, and the wages of an ordinary labourer are 5 annas a day. To the happiness of the Hindus there are, it appears, some drawbacks; for not only do they lie under the social cloud common to their race in Sandwip, but owing to the calamity of the flood of 1876, which carried off three-fourths of the people, they had to resort to widow-marriage. This has so far lowered their prestige with the people of the mainland, that they now are for all practical purposes excluded from their castes.

The two estates were in the hands of the Salt Department up to 1839, when they were transferred to the Collector. It was not, however, until 1846 that the latter took steps to grant leases, for the purpose of reclamation, free of rent; and seven years later they were again given rent-free to a Mr. Ronald, whose family continued to hold them, at increasing rents, until 1867. They continued in farm until 1872, since which year they have been held khas.

From the four measurements of 1846, 1865, 1879 and 1897, it appears that Lakhi is diminishing in size somewhat rapidly, whilst Badu is slightly increasing.

The present survey and settlement proceedings were commenced in December 1896; Mr. E. F. Berkeley took charge of the survey, and Babu Bhupendra Nath Gupta, Officiating Deputy Collector, was in charge of the settlement. The survey and record-writing were finished by the following hot weather. The settlement operations were completed by September 1898 and the final report was submitted two months later.

3. Since the last settlement which took effect from 1883-84, Char Lakhi has lost 4,167 acres by diluvion, and Char Badu has gained 638 acres by alluvion. The present areas of the two estates are 15,642 and 5,745 acres, respectively,

the area of the two together being 33·42 square miles. The following table gives statistics as to the settled and cultivated areas:—

Name of Estate.	Area according to present survey.			Cultivated area, including homesteads, orchards, thatching-grass lands, and new fallows.			
	Settled area.	Unsettled area at the disposal of Government.	Total	Last settlement.	Present settlement.	Increase since last settlement.	Percentage of present cultivated area on total area (column 4).
1	2	3	4	5	6	7	8
	Acres.	Acres.	Acres.	Acres.	Acres.		
Lakhi ...	14,977	665	15,642	11,438	12,852	1,414 acres, or 12·3 per cent.	82·1
Badu ...	6,093	652	5,745	3,822	4,173	351 acres, or 9·1 per cent.	72·6
Total ...	20,070	1,317	21,387	15,260	17,025	1,765 acres, or 11·5 per cent.	79·5

The percentage of the present cultivated area is very high. The staple crop is rice.

4. In the present settlement the rights of the inhabitants have been classified according to the nomenclature of the Tenancy Act. The local names *howladars*, *nim-howladars*, *krishaks*, and *jotdars* are used somewhat loosely, and, in the case of *jotdars*, with two entirely different meanings. The *howladar* was the original tenant, who brought the land under cultivation. If his land exceeded 100 bighas, or was mainly cultivated by under-tenants or sub-tenants of long-standing, he was recorded as a tenure-holder; otherwise as a settled raiyat. Similarly, the *nim-howladars* have been entered as under-tenure-holders or settled raiyats. The *krishaks*, with the exception of two entered as tenure-holders, have been recorded as settled raiyats. The *jotdars* are what are elsewhere known as *shikmi* viz. under-raiyats or *korphas*, without occupancy rights. They have by local custom no rights whatever in the land, and their tenancy is usually of very short duration. They appear to share, however, in the general prosperity of the islands. The word is also used of six tenants who were originally *howladars*; and these have been recorded as tenure-holders. The statement below shows the number and class of tenants paying *direct* to Government:—

	Number of tenants.	Area held in acres.	Rent payable according to the present settlement.	Average area of holding in acres.	Average rent per acre.
1	2	3	4	5	6
Estate Lakhi.			Rs. A. P.		Rs. A. P.
Tenure-holders ...	342	10,033·17	20,203 0 4	29·33	2 0 2
Settled raiyats ...	614	4,919·49	9,595 9 6	8·01	1 15 2
Non-occupancy raiyats	6	24·57	49 12 7	4·09	2 0 5
Total ...	962	14,977·23	29,848 6 5	15·56	1 15 10
Char Badu.					
Tenure-holders ...	144	3,346·21	7,040 15 1	23·23	2 1 8
Raiyat at fixed rate ...	1	12·91	26 13 7	12·91	2 1 3
Settled raiyats ...	227	1,730·26	2,871 6 3	7·62	1 10 6
Occupancy raiyat ...	1	3·14	7 7 1	3·14	2 5 11
Total ...	373	5,092·52	9,946 10 0	13·65	1 15 3
Grand Total ...	1,335	20,069·75	39,795 0 5	15·03	1 15 8

5. There are 1,470 under-tenants in Lakhi, and 482 in Badu, who have been classified in accordance with the provisions of the Tenancy Act as follows:—

	Char Lakhi	Char Badu.	Total.
1	2	3	4
Under tenure-holders ...	35	7	42
Settled raiyats	736	268	1,004
Occupancy raiyats	8	6	14
Non-occupancy raiyats ...	419	117	536
Rent-free raiyats	16	8	24
Under-raiyats	244	74	318
Under-raiyats of the 2nd degree ...	5	.....	5
Rent-free under-raiyats ...	7	2	9
Total ...	1,470	482	1,952

The Settlement Officer has not furnished information as to the areas held or the rents paid by the under-tenants. Occupancy rights are freely sold, and it is stated that the landlords never deny the right of an occupancy raiyat to alienate his holding. It is also stated that non-occupancy raiyats and even under-raiyats usually transfer their rights.

6. In both Lakhi and Badu the soil consists of a rich loam, with little sand in it, and there is very little difference in the quality of the cultivated lands. The classification made is as follows:—

Class A-1.—*Hasila* or cultivated land, new fallow (*sanpatit*, *i.e.*, left fallow for a year) orchard, homestead, and thatching-grass land.

„ *A-2.*—*Laikabad* or virgin soil, jungle, and *sonait patit* or cultivated land abandoned for more than three years.

„ *A-3.*—*Malangchar* or valuable pasture land, unfit for rice.

„ *A-4.*—*Degichar* or land little better than mud, washed at ordinary tides, but growing *nonagach* or sâl tree in abundance.

B.—*Nalaik* or unculturable, held free of assessment.

7. The legal ground for enhancing the existing rates of rent was that of the rise in the price of rice. For purposes of comparison the quinquennial periods 1879-1883 and 1892-96 were selected; and it was ascertained that a rupee would purchase 23 seers 2 chitaks in the former period, and 14 seers in the latter; or, in other words, that the maximum enhancement permissible under the Bengal Tenancy Act was 7 annas in the rupee. But the only class of tenants whose rents have been generally raised are the *howladars*, viz, those who have been classed as tenure-holders and those who have been given the status of settled raiyats. These men, or their predecessors in title, as the first settlers, had to contend with many difficulties and to undergo considerable trouble and expense in clearing the jungle and bringing the land under cultivation, and they suffered very severely, both in life and property, from the cyclone and storm-wave of 1876. It was, therefore, decided that, whether classed as tenure-holders or settled raiyats, their rents should not be raised by more than 25 per cent. In accordance with this principle, the rate of rent for *hasila* lands held by *howladars* has been raised from 10 annas to 12 annas 6 pies per standard bigha, except for five *howladars* in Lakhi, who had for a long time been paying rent at a rate of 8 annas a bigha, which has been raised to 10 annas. In each case the rent settled was accepted by the tenant, and there has been not a single appeal against the Settlement Officer's decision.

8. No application was filed for the settlement of fair rents for under-tenants, but certain of the landlords represented to the Settlement Officer that the rents paid by some of their tenants were unusually low, and in the case of 42 under-tenants in Lakhi and 10 in Badu, the existing rents were enhanced with the consent of the parties concerned.

9. The Government revenue now fixed is shown below in comparison with the demand finally fixed at the last settlement, and the existing demand as increased by subsequent settlements of waste lands:—

Name of estate.	Revenue fixed at last settlement.	Existing revenue.	New revenue.	Percentage of increase over:—	
				Revenue fixed at last settlement.	Existing revenue.
1	2	3	4	5	6
	Rs. A. P.	Rs. A. P.	Rs. A. P.		
Lakhi ...	22,718 9 8	24,276 9 8	29,848 6 5	31·3	22·9
Badu ...	7,506 6 2	7,631 12 8	9,946 10 0	32·5	30·3
Total ...	30,224 15 10	31,908 6 4	39,795 0 5	31·6	24·7

The Settlement Officer states that, owing to the extension of cultivation since the last settlement, the revenue demand could have been raised from that given in column 2 of the above statement to Rs. 26,653-1-11 in Lakhi and to Rs. 8,273-9-11 in Badu, without any enhancement of the rates of rent. Approximately, therefore, Rs. 3,935, or 55 per cent. of the increase of revenue in Lakhi over the demand of the last settlement, and Rs. 767, or 31 per cent. of the increase in Badu, are due to extension of cultivation, and the remainder is due to the enhancement of rates.

10. The present kists for the payment of the rents are considered inconvenient, and, at the instance of the raiyats, the Settlement Officer has recommended that they should be altered as follows:—

Present kists.		Proposed kists.	
1		2	
	As. P.		As P.
May ...	... 0 6	July ...	... 2 0
August ...	... 3 6	October ...	... 4 0
November ...	... 6 6	January ...	... 4 0
February ...	... 5 6	April ...	... 6 0
Total	... 16 0	Total	... 16 0

The recommendations of the Settlement Officer may be disposed of by the Board on receipt of the further report called for by them.

11. The new settlement came into force in April 1899; and the Settlement Officer recommends that it should run for 20 years. Looking to the moderation in the present enhancement, the Lieutenant-Governor agrees with the Board in thinking that there is no necessity to fix a longer term than 15 years for the present settlement.

12. The total cost of survey and settlement debitable to these estates is Rs. 14,721-10-9, or 11 annas per acre. His Honour agrees with the Board that this is not excessive.

13. The settlement record should, as proposed, be maintained by the khas mahal staff, in accordance with the rules given in Appendix M to the Survey and Settlement Manual, 1895. The Lieutenant-Governor agrees with the Board that the khas tahsil staff and the local Revenue Officers should regularly inspect the permanent boundary marks and take the necessary steps for their maintenance.

14. The Lieutenant-Governor confirms this settlement. It has been made throughout under the rules contained in the revised Survey and Settlement Manual of 1895, and he agrees with the Director of Land Records in thinking that their working, as evidenced here, is satisfactory. The Settlement Officer, Babu Bhupendra Nath Gupta, has carried out the settlement with marked ability. The acknowledgments of Government are also due to Mr. E. F. Berkeley of the Survey of India Department; and the services rendered by the Assistant Settlement Officer, Babu Kailash Chandra Bose, and the settlement staff generally, are commendable.

ORDER.—Ordered, that this Resolution be published in the *Calcutta Gazette*, and that a copy of it be sent to the Board of Revenue.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONER, BENGAL, FOR THE YEAR 1898.

MUNICIPAL DEPARTMENT—SANITATION.

Calcutta, the 14th August 1899.

RESOLUTION—No. 4123S.

READ—

Report of the Sanitary Commissioner, Bengal, for the year 1898.

Read again—

The Report of the Sanitary Commissioner, Bengal, for the year 1897 and the Resolution of Government recorded thereon.

The report, which was due on the 1st May, was received on July 6th. The delay is due to the fact that the Sanitary Commissioner necessarily had to devote almost all his time to the supervision of plague measures. The report was submitted for the first time through the Inspector-General of Civil Hospitals, who has appended to it a valuable note in which he reviews the salient points in the sanitary history of the year, and compares the conclusions drawn from the figures with those derived from the statistics of hospitals and dispensaries.

2. *Birth-rate.*—The number of births registered in 1898 was 2,543,701 against 2,625,844 in the previous year; the ratio per mille of population being 35·79 as against 36·94 in 1897 and 35·61, the average of the previous five years. A particular interest attaches to the figures for the year under report, which illustrate the concluding chapter in the history of the recent famine. The decrease in the birth-rate was anticipated by the Sanitary Commissioner in his last report, and is now considered by him to be without doubt due to the low vitality of the people in the preceding year caused by the effects of famine and high prices. He points out that the number of births was everywhere considerably higher during the last five months of the year than during the earlier months, and that this was particularly noticeable in those parts of the Province which were most severely affected by famine.

While, however, there can be no doubt that the famine did exercise a certain influence in this respect, its effects are nevertheless by no means so clearly marked as would naturally be expected, and the view of the Sanitary Commissioner must be accepted with modifications. If the famine were the sole cause of the reduction in the birth-rate, we should expect to find that there had been a corresponding reduction in the birth-rate of other provinces where famine prevailed, and that in Bengal the reduction was most distinctly marked in the districts most severely affected by the famine. This, however, is not the case. Both in the North-Western Provinces and in the Central Provinces the birth-rate shows an increase, the former having actually risen from 31·10 in 1897 to 37·35 in 1898; and in Bengal, of the 15 districts which were classed as famine districts, six including Saran, Champaran and Muzaffarpur, show an appreciable increase over the previous year's birth-rate. In Saran and Champaran the birth-rate was in advance of the mean of the previous five years, while the birth-rate in the Patna Division as a whole, which last year was the lowest in the Province, now stands above those of Burdwan and Chota Nagpur, and is only fractionally lower than the average. Moreover, reference to the figures of previous years shows that the greater incidence of births in the later months of the year is by no means an abnormal state of things. It was pointed out by Government in 1894 that it was due to certain months being considered as lucky or unlucky for the celebration of marriages, and this view was accepted by the Sanitary Commissioner in his report for 1895. It would appear then that the fall in the birth-rate during the year under report is due, as the Inspector-General of Civil Hospitals points out in his note, not solely to the effects of the famine, but in great part to other special causes which can only be fully ascertained by a careful study of the subject extending

over a long term of years. Attention, however, must again be drawn to the fact which has on several previous occasions been pointed out, that considerably greater accuracy in registration must be attained before the vital statistics of the Province can be considered as a basis on which definite and satisfactory conclusions can be founded.

Among individual districts, Murshidabad stands first with 43·59 followed by Tippera (43·40) and Noakhali (42·22). Malda shows a remarkable decline from 47·40 last year to 41·56 this year. Calcutta is, as usual, at the bottom of the list with 13·98; the departure of women from fear of plague having doubtless caused the large decrease since last year. Of rural districts Shahabad stands lowest with 29·79. Among towns, Jangipur has been taken to the head of the list by a rise from 37·67 to 42·82, while Jamalpur in Monghyr is second with 44·05 as against 52·62 last year.

In only 12 rural areas was the recorded birth-rate up to the general estimate for the whole Province of 50 per mille, and of these there were 3 in each of the districts of Mymensingh and Murshidabad. The lowest birth-rate is as usual in Jhalakati. The Government of India having in their review of the report for 1897 repeated an opinion previously expressed that the extraordinarily low rate recorded was due not so much to any special cause as to defective registration, a careful enquiry was made by the Sanitary Commissioner and the District Magistrate, which disclosed the curious fact that out of a total population of 2,365 of whom 399 are females, only 49 of the latter are married women capable of bearing children. The birth-rate, however, has increased from 2·11 to 8·45 since last year.

3. *Death-rate.*—The number of deaths registered in 1898 was 1,888,468, giving a ratio of 26·57 per mille as against 2,341,632 and 32·94 in the previous year, and an average for the past 10 years of 2,044,902 and 28·77. The mortality from fever and cholera was particularly low, and the other principal diseases also show a decline. Climatic conditions and an abundant supply of food were no doubt the most important and obvious factors in bringing about this fortunate state of things.

In towns the death-rate, owing to the general absence of epidemics, fell to the remarkably low figure of 27·50, as against 35·09 last year, and an average for the last five years of 34·15.

No exceptionally high death-rate was recorded anywhere; the only towns which exceed the provincial estimate of 44 per mille being Garulia (52·84) Malda (49·54) and Serampore (44·72).

Only 14 rural areas as against 60 last year show a death-rate in excess of 44 per mille. In Maskhal and Chakaria the after-effects of the cyclone and storm-wave which devastated Chittagong in 1 97, made themselves felt in the shape of a severe epidemic of cholera, and in Siliguri in Darjeeling the malarial fever of the Terai claimed even more victims than usual.

4. *Death-rate by age and sex.*—The death-rate among males in 1898 was 28·75 as against 35·87 in 1897 and 30·87, the average of the preceding 10 years. Among females it was 24·40 as compared with 30·03 and 26·68. The diagram appended to the report again shows that at every stage of life the mortality among males is reported to be slightly higher than that among females. So far as children are concerned, the Inspector-General points out that the experience of India does not differ from that observed in Europe. In his last report, Major Dyson expressed with some confidence the view that the explanation was to be found in the greater difficulty of rearing male children, and the greater extent to which male adults are exposed to accidents and the hardships and vicissitudes of an outdoor life in the fields. As regards children, his previously expressed view holds good; but Major Dyson now admits the difficulty of maintaining the correctness of figures which show that the mortality among women of child-bearing age is less than that among males of the same age; and, while partially admitting the soundness of the explanation that registration in the case of females is more defective than in the case of males, calls attention to the large number of widows of child-bearing age, who are exposed to neither the perils of childbirth nor to the hardships undergone by the male sex. Until, however, the standard of correctness in registration is considerably higher than at present, it will be impossible to give a satisfactory explanation of this and

other difficulties which present themselves in the examination of vital statistics. The following table compares the mortality according to age during the last two years with that of the previous decade:—

	In 1898.		In 1897.		Average of past ten years 1888—97.	
	Deaths.	Ratio per mille.	Deaths.	Ratio per mille.	Deaths.	Ratio per mille.
1	2	3	4	5	6	7
Under 1 year	441,079	192·35	495,648	216·15	386,642	168·61
1 year and under 5 years ...	272,169	34·08	336,276	42·11	297,164	37·21
5 to 10 years	150,496	14·04	188,060	17·54	165,649	15·45
10 to 15 „	92,759	11·96	114,479	14·76	95,547	12·32
15 to 20 „	90,947	15·45	114,591	19·47	96,758	16·44
20 to 30 „	187,026	16·11	237,537	20·46	206,972	17·83
30 to 40 „	168,831	16·72	221,366	21·92	199,763	19·78
40 to 50 „	143,034	20·93	189,636	27·76	176,855	25·89
50 to 60 „	127,824	31·44	170,565	41·95	155,994	38·37
60 years and upwards	214,303	65·83	273,474	71·24	263,568	68·66
Total ...	1,888,468	26·57	2,341,632	32·94	2,044,902	28·77

It is curious that the mortality among Musulmans during the year under report is given as 29·53, as against 25·51 among Hindus. The variation is unexplained, and is not a normal one.

5. *Registration.*—The perpetual stumbling-block of defective registration was dealt with by the conviction of 1,935 persons for failure to register and the cautioning of 362 more. The amount of fines imposed was Rs. 3,052. During the year 239,885 births and 151,285 deaths were enquired into by the vaccination staff, with the result that 3,332 births and 1,776 deaths were found not to have been registered at the thanas. If these figures could be regarded as typical, they would indicate that registration is defective to the extent of 13 per mille in the case of deaths and of 11 per mille in the case of births. The accepted normal estimates are 50 per mille for births and 44 per mille for deaths in Bengal. It is probable, however, that the verification itself was not altogether complete. It must be remembered that it is only since 1892 that any real progress in the improvement of registration has been made. In order to verify the estimate as at present accepted, the results of the approaching census must be awaited. When they are known, much that is now hypothesis will be ascertained fact, and will provide a starting point from which more satisfactory deductions can be made than is at present the case. The Inspector-General of Civil Hospitals selects the low mortality registered in Chota Nagpur as a particular instance which throws doubt on the general accuracy of the returns.

6. *Principal diseases.*—The question of the influence of meteorological conditions on the prevalence of fever and cholera is a perennial subject of discussion. In the present year the mortality from fever has been lower than usual, and that from cholera the lowest ever recorded in the Province. The former of these facts Major Dyson can only ascribe to the general healthiness of the year; the latter he considers to be due to the almost normal rainfall of the year and the satisfactory agricultural outturn.

The following table shows the mortality from these two causes and the corresponding rainfall in 1898 and each of the five preceding years:—

	Rainfall.	Deaths from fever.	Deaths from cholera.
1893	80·96	1,477,288	126,976
1894	68·81	1,799,833	236,150
1895	54·42	1,634,254	177,087
1896	51·10	1,760,225	226,824
1897	63·53	1,679,132	196,247
1898	68·54	1,419,483	65,020

A glance at these figures will show how difficult it is to establish an immediate connection between meteorological conditions and the prevalence of these two diseases. In 1894, when the rainfall was almost exactly the same as in the year under report, the mortality from each of them was the highest in the quinquennium, and the decrease in fever in 1897, which was noticed in last year's report as being due to the early cessation of the rains in the previous year, has occurred to a still greater extent in 1898, in spite of the abundant rainfall of 1897. It appears impossible to generalise on this subject with the means at our disposal; but much may be expected from Colonel Hendley's proposal to prepare medical histories of each district, which shall combine information as to the character and peculiarities of the country in each particular instance with observations on the varying local influence of meteorological conditions on the public health. The mortality from cholera was highest in Chittagong (7·92), while Puri, where the congregation of pilgrims usually gives rise to a high death-rate, of which an unfortunate instance has occurred during the current year, was comparatively free from it in 1898.

The high rate of mortality in Chittagong has already been explained. The Sanitary Commissioner and the Inspector-General of Civil Hospitals have under consideration a plan for working out in full detail the sanitary arrangements necessary to guard against outbreaks of cholera at fairs and assemblages of pilgrims. The Lieutenant-Governor hopes that it will be found possible to put this plan into force at once Inoculation against cholera has been carried on throughout the year at the Purulia cooly depôt; and while no information is available from Assam as to its results, the work is obviously a necessary one, and is reported to have been well and carefully conducted. The seasonal incidence of the disease was highest in Bengal and Orissa during the first five and the last months of the year, while in Bihar it was highest in April and May.

Fever claims, as usual, by far the largest number of victims, though fortunately fewer than last year. It is again pointed out that in the mind of the chaukidar fever includes all diseases except cholera and small-pox, and the Inspector-General of Civil Hospitals specially notices the probable inclusion of respiratory affections and parasitic disorders. The character of the country and the habits of the people, however, make a large mortality from malarial fevers unavoidable. In the last report special notice was given to the opinion of the late Civil Surgeon of Faridpur to the effect that the high mortality from fever in that district was due in great part to the practice of steeping jute in all the standing water available. The opinions of other Civil Surgeons have accordingly been invited, and the Sanitary Commissioner agrees with the views expressed by the Civil Surgeons of 10 out of 13 of the districts where the practice obtains, that, though disagreeable, it is not proved to be specially favourable to the development of malaria. In so far, however, as the practice fouls the water supply, it must prejudice the public health, and is probably one of the causes of bowel-complaints.

Of individual districts, the death-rate from fever was highest in Noakhali (35·16), Dinajpur (33·43) and Rajshahi (31·16), all of which show an increase on last year's figures. In each of these districts a high rate of fever mortality is constant, and the only special factor noted by the Civil Surgeons is in Rajshahi, where waves of unhealthiness of the nature of influenza passed over the district in March, August and October.

The mortality was lowest in Puri (5·53), Calcutta (8·89) and Ranchi (9·89). It was as usual much lower in urban than in rural areas.

7. *Small-pox.*—14,269 deaths from this cause, or ·20 per mille, were registered during the year under report as against 19,655, or ·27 per mille in the previous year. By far the highest mortality (5·82) was in Puri, where the disease is believed to be fostered by the practice of inoculation. This question is engaging the special attention of the Sanitary Commissioner.

8. *Dysentery and Diarrhœa.*—The deaths from this cause were 37,155—a large falling off from last year and from the average of the last 10 years. The decrease is ascribed to the plentiful harvest and to the lesser incidence of malarial fevers. The highest death-rates were returned from Calcutta (4·51) and Howrah (4·08).

9. *Other causes.*—The mortality from other causes, excluding injuries and those already noticed, was 320,081 as against 350,180 in the previous year.

10. *Expenditure on Urban Sanitation.*—The following table shows the municipal expenditure on sanitation during the last two years:—

Heads of Expenditure.	Total Expenditure.		Difference.	
	1897-98.	1896-97.	Increase	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
1. Conservancy, including establishment, road-watering, latrines, &c.	10,58,815	9,21,519	1,37,296	...
2. Drainage	1,13,456	1,21,060	...	7,604
3. Water-supply	2,62,636	5,44,984	...	2,82,348
4. Disposal of the dead ...	8,883	11,781	...	2,898
5. Markets and slaughter-houses	43,819	15,957	27,862	...
6. Treatment of the sick ...	3,41,492	3,32,653	8,839	...
7. Vaccination	20,285	19,912	373	...
8. Other sanitary works ...	1,02,038	66,380	35,658	...
Total ...	19,51,424	20,34,264	...	82,840
Construction and maintenance of roads.	4,19,908	4,36,684	...	16,776
Total, including roads ...	23,71,332	24,70,948	...	99,616

The decrease in expenditure on water-supply is more than accounted for by the reduction of capital expenditure in Howrah and Bhagalpur by Rs. 72,000 and Rs. 244,000 respectively.

The large increase in expenditure on conservancy is due to salutary apprehensions of the advent of plague. 45·75 per cent. of the total income of municipalities was spent on sanitary works, original and recurring. Major Dyson notices with regret that in certain important towns nothing was spent on original sanitary works; but until definite instances of actual deficiencies and neglect are pointed out, the Lieutenant-Governor hesitates to impute default to any local body simply on the ground of their expenditure sheet under this heading being blank for the year. The principal deficiency noted in all municipalities is the want of pucka drains and of proper levelling of the drains. These defects are universal in the smaller municipalities, and are in their case more or less inevitable owing to want of funds. It may, moreover, be noted that the desirability of having pucka drains everywhere is by no means universally admitted. Special remarks were made on this subject in the last Municipal Resolution. It is satisfactory to note that in almost all cases where defects are mentioned, remedial measures have been adopted. In Dacca, where the most serious defects are pointed out, great progress has been made in improving the conservancy, though much yet remains to be done. The Sanitary Commissioner includes in his report a table showing the comparative death-rate before and after the introduction of drainage and water-supply systems in various towns in Bengal. He, however, admits that the deficiences of registration in the earlier years prevent any useful inference being drawn from the figures—a remark which unfortunately applies, as has already been noticed, to most of the statistical portion of the report.

11. *Precautions against plague.*—The four observation camps at Chausa, Chakradharpore, Mairwa and Khurda Road were in full working order throughout 1898. In the Chausa Camp 636,819 persons were inspected and 24,776 were detained. Among the latter there were 18 deaths, only 5 of which were from plague. The expenditure incurred was Rs. 89,359. At Chakradharpur 57,624 persons were examined and 6,012 detained There was not a single death in the camp. The cost amounted to Rs. 61,860. At Mairwa the number of persons inspected and detained was 177,501 and 4,757 respectively. There were four deaths during the year, none of them from plague. The cost was Rs. 68,520. At Khurda Road 110,083 persons were examined and 3,478 detained. One death from small-pox occurred in the camp. The expenditure was Rs. 5,063.

12. *Sanitary Board.*—The Board were unfortunately unable to hold more than one meeting during the year. They were, however, enabled by circulation of files to undertake the usual consultative work; the most important scheme which came under their consideration being that for the supply of filtered water to the municipalities on the right bank of the Hooghly. Eight alternative projects were prepared by the Sanitary Engineer, the estimated cost varying from 24 to 35 lakhs. These have been separately submitted to Government. The possibility of providing a supply of drinking-water for the Patna Municipality from wells sunk in the old bed of the river Sone has now been fully proved, and the work has been taken in hand.

An important experiment in sewage disposal was inaugurated during the past year by the Sanitary Engineer, who was placed on special duty in England for the purpose of enquiring into the subject.

His proposal to carry out experiments on the septic tank principle has been sanctioned by Government, and is now being carried out. The Lieutenant-Governor will await the results with much interest. The suggestions made last year by the Board with a view to causing experiments to be made locally on the system of filtration through cinders of sullage water and waste liquids have been circulated to all municipalities. From the reports received it appears that little or no attention has been paid to the subject by municipalities, and that no results of any importance have been achieved. It is probable that the suggestions of the Board were found to involve more intrusion on the privacy of houses than municipal authorities were willing to undertake, or individuals to submit to.

13. *Inspections.*—Major Dyson was on tour for 162 days during the year. Almost the whole of his time had to be devoted to the organisation and inspection of precautionary measures against plague, and the ordinary sanitary work of the Province has of course suffered from this to a certain extent. Indirectly, however, it may be hoped that compensation will be found in the increased attention on the part of local bodies to sanitation generally, and conservancy in particular, which has been the result of the fear of plague which has overhung the Province during the year under report. Should it prove to have thoroughly and permanently awakened the local authorities to the supreme importance of an efficient system of sanitation, the plague will have done the people of Bengal a service which will go far to counterbalance the trouble and anxiety which it has caused.

The Lieutenant-Governor desires to thank Major Dyson for the care he has bestowed on sanitary administration generally and in particular for the untiring energy and attention to detail which he has displayed in all matters relating to the protection of the Province against plague.

By order of the Lieutenant-Governor of Bengal,

E. N. BAKER,

Offg. Secretary to the Govt. of Bengal.

WORKING OF THE FIRE BRIGADE IN THE TOWN AND SUBURBS OF CALCUTTA AND IN THE MUNICIPALITY OF HOWRAH FOR THE YEAR 1898-99.

NOTIFICATION.

No. 4131M.—The 14th August 1899.—The following is published for general information.

E. N. BAKER,
Offg. Secy. to the Govt. of Bengal.

No. 8920, dated Calcutta, the 3rd August 1899.

From—E. M. SHOWERS, Esq., Offg. Commissioner of Police, Calcutta,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit, in accordance with section 41, Act I of 1893, my report on the working of the Fire Brigade in the Town and Suburbs of Calcutta and in Howrah during the year 1898-99.

2. There were no alterations in the constitution of the Fire Brigade. The force stood at the commencement of the year as follows:—

Lall Bazar.

Superintendent ...	1
Chief Engineer ...	1
Assistant Engineers	2
Driver, European ...	1
Do. Native ...	1
Fireman ...	1
Tindals ...	3
Khalassees ...	18
Syces ...	13

I submit a statement showing the receipts and expenditure on account of the Fire Brigade. The year opened with a balance of Rs. 17,269-5-4. The receipts were Rs. 54,746-4-2, which fell short of the estimate of Rs. 64,112, some of the receipts having been overestimated in the budget estimate. Rupees 7,587-8 represents the amount due, but not paid in by the municipalities during the year. Of this sum Rs. 7,285-8 have since been realized, and Rs. 302 are in course of realization. The total receipts during the year were Rs. 72,015. The expenditure amounted to Rs. 71,125-12-5 against an estimate of Rs. 74,730. The actual balance on the 31st March 1899 was Rs. 889-13-1.

3. During the year under review 38 fires occurred, in which the value of the property destroyed in each case exceeded Rs. 50.

At 32 of these fires the Brigade were in attendance, and in 5 the fires were extinguished by the local police and the residents of the locality. A fire on a country boat, which occurred off Ghoosery on the river, was extinguished by the Port Commissioners' fire-engine *Hooghly*.

4. In addition to the 38 serious fires already noted, 71 small fires occurred, 31 in the Town, 36 in the Suburbs of Calcutta, and 4 in Howrah.

The Brigade attended 7 of these fires, the remaining 64 being extinguished by the residents of the localities.

The average value of the property destroyed at each of these petty fires was Rs. 9-15-11.

5. The total estimated value of all property destroyed by fire during the year under review amounted to Rs. 4,49,579-15 as against Rs. 3,82,605 in 1897-98.

6. There were no lives lost during the year.

7. There were 3 fires in buildings licensed under Act I (B.C.) of 1893 and Act I (B.C.) of 1894, the total estimated value of property destroyed at these fires being two lakhs of rupees.

8. Six fires during the year 1898-99 call for special notice:—

(*a*) On the 11th April 1898, the S.S. *Otterburn* laden with jute cuttings and pressed bales of jute, lying at the Hastings Moorings, caught fire; the origin of the fire is not known. It lasted for 70 hours and 30 minutes. The efforts of the Fire Brigade resulted in saving a quantity of the cargo and in also, by unloading the vessel, preventing the wet bales of jute from starting the plates and rendering the ship a total wreck.

(*b*) On the 17th March 1899, at Hogulkooria Gully, Burtolla, a large oil mill shed caught fire accidentally. Machinery, mustard-oil and seeds were destroyed. The fire lasted 5 hours and 50 minutes. Greater damage would have been caused and probably loss of life had not the Fire Brigade succeeded in reaching the boiler house and letting off the steam from the boilers, and thus averting an explosion.

(*c*) A fire broke out on the early morning of the 29th October 1898 in the "Empress of India" Hydraulic Jute Press, Howrah. Five masonry warehouses containing a large quantity of jute, loose and in bales, were destroyed. The machinery was, however, saved. The fire lasted for 43 hours, and the estimated value of the property destroyed was Rs. 1,60,000.

(*d*) A fire occurred on the 10th November 1898 in the Ramdyall Cotton Mill, Ghoosery, Howrah. Machinery was damaged and cotton destroyed to the estimated value of Rs. 20,000. The fire lasted 1 hour and 30 minutes.

(*e*) On the 14th December 1898, at the Guzdar's Hydraulic Jute Press, Ghoosery, Howrah, a large two-storeyed building containing jute was destroyed; estimated value of damage Rs. 20,000. The fire lasted for 13 hours and 30 minutes.

(*f*) A fire occurred on the 30th December 1898 at the Ganges Jute Mill, Sibpur, Howrah. A large masonry building containing machinery, gunny-bags and waste twine was destroyed. The building was not licensed under the Act, as it was not used for storage of jute or cotton. The fire lasted 6 hours and 50 minutes, estimated value of damage done being Rs. 80,000.

9. During the year two prosecutions were instituted under the Explosives Act. Both cases ended in the conviction of the defendants.

10. A memorandum of the fires that occurred is enclosed.

Memorandum of fires in Town and Suburbs of Calcutta and in Howrah from 1st April 1898 to 31st March 1899.

No.	Date.	Locality with section letter.	Duration of fire.	Approximate value of property destroyed.	Remarks showing nature of damage done, &c.

CALCUTTA,
The 3rd July 1899.

E. M. SHOWERS,
Offg. Commissioner of Police.

WEATHER AND CROP REPORT.

For the week ending the 14th August 1899.

Burdwan.—Rainfall at Sadar 2·24, Kalna 1·50, Katwa 1·51, Raniganj ·71. Weather seasonable. Transplantation of *aman* paddy nearly over. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa slightly decreased. Common rice selling as follows:—

	Srs.	
Sadar	18	per rupee.
Kalna	15½	
Katwa	16	
Raniganj	15¼	

Birbhum.—Rainfall at Sadar ·35, Rampur Hât ·78. Weather hot. Rain wanted. Transplantation of paddy completed. Price of common rice at Sadar 15 seers and at Rampur Hât 16 seers per rupee. Fodder and water sufficient.

Bankura.—Rainfall at Bankura 2·78, Vishnupur 3·76. Weather very hot with occasional showers. Transplantation of rice still continues. Sugarcane growing. Fodder and water sufficient. No cattle disease reported. Rice selling at Bankura 17¾ seers and at Vishnupur 17⅝ seers per rupee.

Midnapore.—Rainfall at Sadar 1·39, Tamluk 5·09, Ghatal 5·71. Prospects of sugarcane, jute, flax and *aus* paddy favourable. Inundations have subsided. Transplantation of winter paddy going on briskly. Grass-hoppers reported from three localities and cattle-disease from Salboni. Common rice sells as follows:—

	Srs.	ch.	
Sadar	16	0	per rupee.
Contai	16	0	
Tamluk	14	3½	
Ghatal	17	0	

Hooghly.—Rainfall at Sadar 1·12, Serampore 1·12, Jahanabad 2·37. Transplantation continues. Some damage has been done to jute and *aus*. Common rice sells at 14 seers 6 chitaks per rupee.

Howrah.—Rainfall at Sadar 1·28, Ulubaria 2·09. Weather hot and cloudy with occasional showers. Flood-water in the *jheels* is being drained and transplantation of *aman* going on. Prospects hopeful, but for some little time the less rain there is the better. Common rice sells at 14 seers per rupee. Fodder and water sufficient.

24-Parganas.—Rainfall at Sadar 1·25, Barasat ·87, Basirhat ·14, Diamond Harbour 2·89. Weather hot and cloudy with occasional rain. Prospects of standing crops not favourable owing to excessive rain Transplantation of *aman* going on briskly on high lands and on the lands whence the water has subsided. The excessive rainfall destroyed the paddy seedlings and stopped transplantation on low lands. The drainage in the Diamond Harbour and Basirhat subdivisions is defective. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	12½ to 16	per rupee.
Barasat	15	
Basirhat	17	
Diamond Harbour	13¼	

Nadia.—Rainfall at Sadar ·32, Kushtia 3·16, Meherpur 2·40, Chuadanga 1·38, Ranaghat 1·19. Weather cloudy and rainy. Transplantation of *aman* continues. Harvesting of *aus* and steeping of jute commenced. River water subsiding. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Kushtia	17	
Meherpur	14½	
Chuadanga	15	
Ranaghat	14	

Murshidabad.—Rainfall at Sadar 2·79, Kandi 1·10, Jangipur 1·04. Weather hot. Harvesting of *bhadoi* still going on. Transplantation of *aman* nearly finished. Indigo is being cut. Prospects of mulberry and jute good. Crops in some places have suffered much on account of floods. Water and fodder sufficient. No cattle-disease reported. Common rice sells as follows:—

	Srs.	
Sadar	14	per rupee.
Kandi	16	
Jangipur	15	

Jessore.—Rainfall at Sadar 2·07, Jhenida ·11, Magura 1·26, Narail 2·10, Bangaon 1·76. Weather cloudy and rainy at intervals. Harvesting of *aus* paddy going on. Prospects of crops tolerably good. Rivers are rising. Insects are gradually disappearing. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Jhenida	16	
Magura	18¾	
Narail	15	
Bangaon	17	

Khulna.—Rainfall at Sadar ·74, Bagirhat ·93, Satkhira ·57. Weather hot with occasional rain. Transplantation of *aman* going on. Insects still damaging paddy in some parts. Fodder and water sufficient. Cattle-disease reported from Baitaghatta and Rampal. Common rice sells as follows:—

	Srs.	
Sadar	17	per rupee.
Bagirhat	17	
Satkhira	15	

Rajshahi.—Rainfall at Sadar 2·21, Nator 1·42, Naugaon 2·12. Flood subsided. Prospects of crops fair. Steeping of jute commenced. Transplantation of *aman* in full swing. No cattle-disease. Fodder and water available. Common rice sells at 17 seers per rupee.

Dinajpur.—Average rainfall 3·29. Weather seasonable. Transplantation of *haimanti* paddy and steeping of jute progressing. Cattle-disease reported from some thanas. Fodder and drinking-water plentiful. Common rice selling at 17 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 4·01, Alipur Duars 12·07. Weather hot and rainy. Transplantation of *haimanti* paddy and harvesting of *bhadoi* paddy still going on. Prospects favourable. Jute is being cut and steeped. Fodder and water ample. Common rice sells at 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 5·59, Kalimpong 4·61, Siliguri 7·80. Weather seasonable. *Hills—Kalai* and *phaphar* being sown; *Bhutia, chota marua, bora marua, bhadoi* and *haimanti* paddy doing well. *Terai*—Transplanting of *haimanti* paddy going on; *jamira* paddy being reaped; jute, *bhadoi*, and sugarcane doing well. Coarse rice sells as follows:—

	Srs.	
Hills	10	per rupee.
Terai	16	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 1·22, Gaibanda 3·43, Nilphamari 2·68, Kurigram 3·57. Weather seasonable. Transplantation of winter rice and steeping of jute in progress. Prospects good. Common rice selling at 17 seers 6 chitaks per rupee. Fodder and water sufficient.

Bogra.—Average rainfall 2·56. Cutting of *aus* and jute and transplanting of *aman* continuing. Prospects good. Fodder and water ample. Common rice selling at 17½ seers per rupee.

Pabna.—Rainfall at Sadar 1·17, Sirajganj 2·92. Weather hot and rainy. Prospects of crops good. *Aus* being harvested. Common rice 16 seers 2 chitaks per rupee.

Dacca.—Rainfall at Sadar 1·98, Manikganj 1·03, Munshiganj 1·58. Weather seasonable. Prospects of standing crops good. Fodder available. No cattle-disease. Common rice 17 seers per rupee.

Mymensingh.—Rainfall at Sadar 4·14, Jamalpur 1·55, Netrokona 5·04, Kishorganj 1·30, Tangail 2·34. Continual showers. Rice doing well. Jute suffering from want of sunshine. Condition of cattle good. Fodder and water ample. Common rice selling at 20 seers per rupee.

Faridpur.—Rainfall at Sadar ·54, Goalundo ·99, Madaripur ·22. Weather seasonable. State and prospects of paddy generally good. Common rice sells at 17 seers per rupee.

Backergunge.—Rainfall at Sadar 1·74. Weather seasonable. Prospects of crops fair, but *pamari* insects in places. *Aus* is being reaped. Transplantation of *aman* has begun. Common rice sells at 16 seers (*aman*) and 18 seers (*aus*) per rupee.

Tippera.—Rainfall at Sadar 6·10, Brahmanbaria ·75, Chandpur 1·20. Ordinary monsoon weather. Jute and *aus* paddy being cut. *Aman* doing well. Common rice 20 seers per rupee.

Noakhali.—Rainfall at Sadar 8·97, Feni 4·45. Crop prospects fair. Transplantation of *aman* and harvesting of *aus* continue. No cattle-disease. Fodder and water sufficient. Price of common rice—*aman* 16 seers and *aus* 19 seers per rupee.

Chittagong.—Rainfall 2·82. Weather seasonable. *Aus* being reaped. *Aman* being cultivated. Prospects good. Common rice 15 seers per rupee. Water and fodder sufficient.

Patna.—Rainfall at Sadar ·25, Barh ·14, Dinapore ·21, Bihar ·15, Hilsa nil, Bikram nil. Weeding of Indian-corn and other *bhadoi* crops going on in some places. Transplantation of paddy in progress. Condition of cattle good. Green fodder and water for cattle plentiful. Common rice in Patna sells at 14 seers per rupee.

Gaya.—Rainfall at Sadar ·36, Jahanabad ·03, Aurangabad 1·53, Nawada ·81. Transplantation of paddy continues. Prospect of *bhadoi* bad. Common rice selling at 12 seers per rupee.

Shahabad.—Rainfall at Sadar ·01, Buxar ·07, Bhabua ·55, Sasaram ·72. Transplantation of paddy going on. *Bhadoi* wherever saved from effects of excessive rain is doing well. Cattle-disease reported from Buxar, Dumraon, and Nawanagar thanas. Twenty-four cases of cattle-disease reported from Sasaram. Fodder and water abundant.

Saran.—Rainfall at Sadar ·36, Siwan ·44, Gopalganj 2·82. Weather sultry. Transplantation of paddy in full swing. Prospects of *bhadoi* somewhat better. Average prices—Common rice 13·9 seers and *makai* 20·1 seer per rupee.

Champaran.—Rainfall at Motihari 1·08, Bettiah ·82, Barharwa ·97, Bagaha 1·33, Ramnagar ·86. Prospect of *bhadoi* slightly improved by fine weather. Transplantation of *aghani* paddy still going on with good prospects. Common rice 13 and maize 22 seers per rupee.

Muzaffarpur.—Paddy being transplanted. Prices are—Common rice 12 seers, wheat 15 seers, barley 19 seers, *makai* 17 seers, gram 18 seers, and *rahar* 20 seers per rupee.

Darbhanga.—Rainfall at Sadar 2·64, Samastipur ·18, Madhubani 2·57. Weather hot and sultry with occasional showers of rain. Transplantation of paddy is still in progress. Weeding of *bhadoi* crops going on. *Makai* and *marua* have been considerably damaged. Prospects of rice are good. Fodder and water sufficient. No cattle-disease. Common rice selling at Sadar 11½ seers per rupee.

Monghyr.—Rainfall at Monghyr 1·71, Begusarai ·77, Jamui ·57. Weather hot and cloudy with occasional showers. Transplantation of winter rice going on. *Janera* is being resown in some places. *Bhadoi* in several tracts ruined. Prices of food-grains rising. Common rice sells at Monghyr 11 and Jamui 10 seers per rupee.

Bhagalpur.—Weather sultry and overcast. Rainfall at Sadar ·88, Madhipura 2·40, Supaul 4·58. *Bhadoi* crops seriously damaged already. The rain, however, is proving beneficial to the *aghani* seedlings. Transplantation still going on. Fodder plentiful. Prices continue to rise.

Purnea.—Rainfall at Sadar 5·51, Kishanganj 3·15, Araria 5·65. Weather seasonable. Harvesting of *bhadoi* paddy and jute progressing. Transplantation of *aghani* continues. Standing crops doing well. Agricultural prospects good. No cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

		Srs.	
Sadar	... ...	15	per rupee.
Kishanganj	... ...	15	
Araria	... ...	16	

Malda.—Rainfall at Sadar ·66, Chanchal 1·22, Shibganj 1·46, Gajol 1·75. Weather hot and cloudy. Harvesting of *bhadoi* rice going on. Transplanting of winter paddy continues. Prospects favourable. Coarse rice sells at 16 seers per rupee. Fodder and water abundant.

Sonthal Parganas.—Weather hot and cloudy. Prospects of paddy good. *Makai* prospects poor. Some cattle-disease. Average price of common rice 13 seers 10 chitaks and of Indian-corn 18 seers 12 chitaks per rupee.

Cuttack.—Rainfall at Sadar 1·17, Jajpur 2·3, Kendrapara 1·79, Banki 1·81. False Point 1·01 Weather hot and seasonable. *Sarad*, jute, *haldia*, cotton and sugarcane are growing. *Beali* in ear and being damaged by insects in places. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

		S.	ch.	
Cuttack	... ...	15	12	per rupee.
Jajpur	... ...	17	1	
Kendrapara	... ...	19	11	
Banki	... ...	17	15	

Balasore.—Rainfall at Sadar 4·43. Sugarcane thriving well. Transplanting and weeding of *sarad* going on. *Aus* crop in ear. Rice sells at 18 seers per rupee in the interior, and at 17 seers at Balasore and Bhadrak. Fodder and water sufficient.

Angul.—Rainfall at Angul ·67, Bisipara ·37. Puddling and transplantation of paddy and *mandia* suspended in many places for want of sufficient rain. Those transplanted are withering in both subdivisions. Early *bhadoi* crops being damaged in Angul, Common rice sells at 27 seers per rupee in Angul and 12 seers in Khondmals. Great anxiety for rain prevails.

Puri.—Rainfall at Sadar ·75, Khurda ·96. Insufficiency of rain badly felt. *Beali* already damaged to some extent, especially in the Sadar subdivision. Puddling and weeding of *sarad* delayed for want of water. Condition of sugarcane, *mandia*, and other miscellaneous crops good. Fodder sufficient. Cattle-disease continues in places. Price of common rice stationary.

Hazaribagh.—Rainfall at Sadar 1·24, Giridih ·46. Weather cloudy. Rain wanted for transplantation in some thanas. Common rice sells at 13 seers per rupee.

Ranchi.—Rainfall 1·34. Weather cloudy. More rain wanted in places. Transplantation retarded in consequence. Rice sells at Ranchi 15 seers per rupee and in the interior 19 seers. No cattle-disease. Fodder and water sufficient.

Palamau.—Rainfall ·53. Weather seasonable. Prospects of crops generally good. No cattle-disease. Rice selling at 15 seers per rupee.

Manbhum.—Rainfall at Sadar ·67, Gobindpur ·47. Weather hot. Prospects of crops generally good. Cattle-disease reported from thanas Tundi, Nirsha, Gobindpur, and Chas. Fodder and water sufficient. Average price of common rice at Sadar 16 seers 11 chitaks and at Gobindpur 15 seers per rupee. Supply sufficient.

Singhbhum.—Rainfall 1·40. Rainfall very unequally distributed. More rain is wanted. Common rice sells at 17 seers per rupee.

General Summary.—There was rain in every district during the week, though the amounts were generally moderate. The rice crop throughout the Province is doing well, the only unfavourable report of any importance coming from the 24-Parganas. The *bhadoi* crop has obtained some slight relief by the diminution in the rainfall, but it is to be feared that there is no chance of a good outturn. The other crops, jute and sugarcane especially, appear to be doing well. More rain is needed in Orissa and one or two districts in Chota Nagpur. Prices show a tendency to rise. There is still a little cattle-disease.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

REVENUE DEPARTMENT,

The total fall of rain from 6th to 12th August 1899	1·41
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·88
The total fall from 1st January to 12th August 1899	53·78
The average fall of the corresponding period for 24 years, Surveyor-General's Office	39·88

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; p, passing temporary showers; t, thunder; lr, lightning reflection, d; drizzling rain.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JULY 1899.

WEATHER during the past month was remarkable on account of the complete absence of cyclonic storms over the Bay, and for the almost continuous low pressure over the Province, Assam and Burma. As no depression of any depth passed inland from the sea, the variations of pressure or the differences from the normal were generally small or of moderate amount; but as the defect was continuous and westerly winds prevailed over the western districts, the moist southerly winds from the Bay, which were quite up to average strength, failed to obtain the usual outlet north-westward up the Ganjetic plain. The result was heavy general rainfall over the greater part of the Province, with a more irregular distribution than in ordinary years.

The part of the Province where defect in rainfall was greatest was naturally in the south-western districts, including Orissa and the south of Chota Nagpur, where the south-westerly winds were most prevalent. The deficiency, however, was in nearly all cases small, as may be seen from Orissa receiving on an average for the whole Division 99 per cent. of the normal for the month, and Chota Nagpur 110 per cent., the excess in the latter being due to the heavier falls in the north of the Division.

A very noticeable peculiarity in the rainfall distribution is that in sub-montane districts, whether in the east or north of the Province, and probably over the lower ranges of the hills, falls were in almost all cases in slight defect, whereas at higher levels, as in the Darjeeling hills, there was a fairly large excess. A marked contrast is shown between Baxa and Darjeeling, at the former of which there was defect of 16 inches and at the latter excess of 11 inches. This slight deficiency extended along the foot of the Himalayas as far as Darbhanga, but from there excess steadily increased, and was greatest in Champaran and Bettia.

Though no cyclonic storm occurred over the Bay, depressions were not wanting inland, and during the latter half of the month a continuous slight depression obtained over Bihar. The first depression began about the 4th in the north of the Bay owing to a rapid fall of pressure in the east. It remained diffused, but moving northwards instead of to the west, it caused heavy general rain in Bengal. When the recovery of pressure began in Burma, and the east of the Province a day or two later, the depression became better defined and moved rapidly westward on the 7th, after which the pressure distribution was normal and rainfall was neither so heavy nor general.

Pressure again fell in the east on the 9th, and as defect in that region slowly but steadily intensified during the subsequent days, the conditions of the beginning of the month were almost restored. The low pressure concentrated and the second shallow depression of the month began over Lower Bengal on the 13th, the area of defect, somewhat over ·15 inch, extending eastwards from Calcutta. This depression followed a more westerly course than the previous one, but it filled up over the central districts and westerly winds continued unchanged in Orissa, Chota Nagpur, and the west of Bihar. On the morning of the 14th, the depression was well defined with a centre near Krishnagar, and pressure was in defect over the whole of Bengal Proper by amounts up to a fifth of an inch. On the 15th, after a rapid rise, the depression was faint with a centre near Naya Dumka, and on the 16th the distribution was practically normal.

During these days, between the 13th and 16th, heavy general rain fell over the whole Province. The heaviest falls were in Bihar, more especially on the 15th, when the depression was filling up. In Monghyr on that date a large proportion of the rainfall stations received amounts varying from 4 to 8 inches, and the smallest fall was 2·5 inches.

After the middle of the month a slight depression formed over the north-west of the Province, with a fairly regular cyclonic circulation of light winds. The monsoon winds from the Bay were not so strong as in the early part of the month, but the cyclonic circulation and a slight oscillatory movement of the area of lowest pressure was sufficient to maintain continuous rainfall in all except the south-western districts. Pressure rose somewhat towards the end of the third week, when there was excess of nearly a tenth of an inch over the Province and the north of the Bay. This excess continued for a few days only. A rapid fall in Bihar was followed by a slight depression, and further heavy rainfall in that area about the 25th and 26th, after which the high pressure was restored and became an important feature of the weather conditions not only for the remaining days of July, but well into August.

With the development of high pressure at the end of the month, rainfall to a large extent ceased, but there were still cloudy skies and light scattered showers, and temperature was not above the normal except by small amounts in Bengal Proper. In the western districts on the last day of the month there was still a moderate defect.

Pressure was relatively low in Burma, Assam and Bengal Proper during a great part of the month, and at times defect at eastern stations was very little under ·2 inch. In the south-western districts, on the other hand, readings were more frequently in excess. The average difference from the normal varies from excess of ·02 inch at Cuttack to defect of about ·04 inch in the east.

It was low almost continuously in the early part of the month, but during the latter half there was a tendency for high pressure to develop. It did not become established till towards the close, when high pressure prevailed over the province and the north of the Bay, and the distribution became more uniform than is usual at the end of July.

Temperature.—As a marked feature of the prevailing weather conditions was heavy cloud with frequent rainfall, temperature was generally low, especially during the day. Maximum temperature on an average for the month was below the normal, except at a few of the more southern stations, and in the west of Bihar there was a large defect, as much as 5° at some stations. Minimum temperature was practically normal, except in the west of Bihar, where on an average for the month there was defect of 1° to 2°.

Mean temperature was practically normal in Bengal, Orissa, and Chota Nagpur, defect in all divisions being less than half a degree. In Assam there was defect of 1° and in Bihar of 2°.

Rainfall has been exceptionally heavy and continuous over a great part of the province, and even in the south-western districts, where it was least in amount, it all but reached the average fall. In Orissa on an average for the whole division the defect was only ·13 inch. In Chota Nagpur there was excess of 1·35 inches, in North Bengal 3·87, in East Bengal 4·32, in South-West Bengal 6·55, and in Bihar 8·68.

As thunderstorms with heavy local falls were much more numerous than usual over a great part of the province, the distribution of rainfall is marked by greater irregularity than in ordinary years, when the monsoon current in July passes freely over the province towards North-West India, and is not subjected to the frequent checks which have been a marked feature of the past month. Though the individual falls are irregular, the averages are more uniform than usual, the various divisions of Bengal Proper and Bihar receiving almost similar amounts. South-West Bengal received on an average 18·68 inches, North Bengal 20·61, Bihar 21·7, and East Bengal 21·88.

As the falls have been so irregular no general idea can be given of the distribution, except by the tabular statement which precedes this, but it may be noticed that there were, much the same as in June, three centres of heavy rainfall—one in South-West Bengal, in which falls were 10 to 15 inches in excess, one in North Bengal, and the third in the west of Bihar, where excess amounts were of similar magnitude, viz., 10 to 15 inches.

The greatest defect was 4 inches in the south of Orissa, and the area of deficient rainfall included the whole of that division, except part of Balasore district and the south of Chota Nagpur, where defect varied up to 3 inches.

In North Bengal, the extreme north of Bihar, and near the Garo and Tippera Hill regions rainfall was slightly below the normal, the differences being 1 to 2 inches, except at Siliguri and Baxa, where defect was 9 and 16 inches, respectively.

The following table gives a comparison of the falls in the various divisions during the month of July with the normal fall, the actual being given as a percentage of the normal fall. The table also shows the actual falls for each of the previous months of the year expressed in the same way, and the last column of the table shows the total of the falls of the past seven months of the year in each division expressed as a percentage of the normal fall :—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	Actual rainfall of first seven months of 1899 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	230	52	17	135	116	122	154	128

Chota Nagpur ...	164	24	Nil	255	86	154	110	118

The following table gives full data for the comparison of the actual and normal rainfall of the month of July in all districts of the Province. The figures are derived from the

average and actual rainfall of the rain-recording stations in each district, due allowance being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 25 years; the second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district; the third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage; and the fourth column gives the same information in a slightly different form, expressing as a percentage how much the district rainfall varied in excess or in defect from the normal rainfall:—

Percentage Table for July 1899.

Division.	District.	Normal district rainfall for July.	Actual district rainfall for July 1899.	Percentage of actual to normal rainfall.	Percentage, excess (+), defect (−).

RESOLUTION ON THE ANNUAL REPORT ON THE WORKING OF THE CALCUTTA SHIPPING OFFICE AND OF THE SHIPPING OFFICES AT OUT-PORTS FOR 1898-99.

No. 1551Marine.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

Dated Calcutta, the 17th August 1899.

RESOLUTION.

READ—

Letter No. 541B., dated 22nd July 1899, from the Secretary to the Board of Revenue, Lower Provinces, submitting the annual report on the working of the Calcutta Shipping Office and of the Shipping Offices at out-ports for 1898-99.

THE number of seamen of all nationalities shipped and discharged through the Calcutta Office was 27,024 and 24,672 against corresponding figures of 26,087 and 23,564 during the previous year as shown in the following table:—

	1898-99.		1897-98.	
	Shipped.	Discharged.	Shipped.	Discharged.
British	1,540	1,301	1,454	1,301
Europeans—Continental...	473	450	460	419
Americans, West-Indians, and Africans.	214	167	191	121
Australians	10	10	11	12
Asiatics other than Indians,	320	406	270	227
Indians proper ...	23,946	21,882	23,283	21,074
Eurasians and Goanese ...	521	456	418	410
Total ...	27,024	24,672	26,087	23,564

2. The increase is again attributed to the more general employment of Indian seamen in the Mercantile Navy. The difference between the total number shipped and discharged is due to the engagement at Calcutta of an increased number of native crew for service in vessels trading from the United Kingdom and elsewhere. The men engaged in service for German vessels were chiefly engine-room crews shipped through the Calcutta Shipping Office in accordance with the Merchant Shipping Act, the usual bond of indemnity for lascars sailing under a foreign flag being filed in the office.

3. The number of British seamen shipped during the year shows an increase of 86 on the figures of the previous year. The number shipped exceeded the number discharged by 239 during the year. During the last six years the number shipped has exceeded those discharged regularly, and has aggregated over 1,200 men on the whole period. This is partly accounted for by the fact that the seamen come from other ports, Bombay, Chittagong, Rangoon, Singapore and elsewhere in search of employment, which, it seems they succeed in finding to the extent indicated, and, probably, partly to the fact that a certain number of men desert from ships in Calcutta. As regards Indian seamen, there has been an increase both in the number shipped and discharged which, as explained above, is due to the more general employment of this class of seamen. The difference between the numbers shipped and discharged is partly due to the crews engaged for service to the United Kingdom not having returned at the end of the year, and partly to fact, just stated, of the larger numbers of this class which are annually employed. The number of Chinese discharged exceeded those shipped by 130. These men appear to stay in the country in increasing numbers.

4. The number of seamen of all nationalities shipped in, and discharged from, foreign vessels through their Consulates, and not included in the figures given above, are—

Shipped	98
Discharged	56

5. There were only 48 deserters against 86 during the previous year; the decrease being ascribed to the fact that the rates of seamen's wages remained uniform throughout the year.

6. The receipts of the Calcutta Shipping Office amounted to Rs. 49,281 as compared with Rs. 47,313 during the previous year. As in the previous year, the largest increase is under shipping and discharging fees, which shows an increase of Rs. 2,379, and is due to the increased operations in shipping and discharging seamen. The increases under other heads are small, and do not call for any remark.

The expenditure during the year amounted to Rs. 22,928, or a reduction of Rs. 1,086 on the preceding year, due almost entirely to reduced charges under "Establishment" and "supply of forms." The former reduction was partly caused by the diminution of exchange compensation allowance, and partly by the fact that none of the superior officers were on leave.

7. The following table shows the receipts of the funds held in trust by the Calcutta Shipping Office on account of both European and Native seamen for the last two years:—

	1898-99.	1897-98.
	Rs.	Rs.
Ticket money	1,040	510
Deposit money of British seamen	26,559	29,415
Ditto of Native ditto	17,325	4,057
Estates of deceased ditto	3,904	6,965

8. There was a small increase of Rs. 530 under Ticket Money, which is attributed to an increase in the number of Indian seamen shipped on sailing vessels, principally vessels chartered for the conveyance of Indian emigrants to the West Indies, who had allotted part of their wages for the benefit of their families.

9. The decrease of Rs. 2,856 under "Deposit money of British seamen" is owing to smaller sums having been received from British and foreign seamen

left behind from their ships in hospital and jail. The old sailing ships trading to India are being replaced by steamers which make short voyages and consequently such of the crews of these vessels as are discharged or left abroad have usually smaller amounts due them as wages than formerly. Of the total deposits, Rs. 25,744 represent the voluntary deposits of 217 seamen, the balance, Rs. 815, being deposited by masters of ships as the wages of eight seamen who had either refused to sign their accounts or were too ill to receive their money.

10. Under "Deposit money of Native seamen" there is an increase of Rs. 13,268, which is due to the wages of the crews of three steamers discharged at out-ports having been remitted to the Calcutta Shipping Office for payment to the men who were sent on to Calcutta as passengers.

11. Under "Estates of deceased Native seamen" there is a reduction of Rs. 3,061; but this is accounted for by the fact that in the previous year the transactions were increased by the wages of the crews of two vessels lost at sea having been remitted to Calcutta by the owners for payment to their relatives.

12. The value of seamen's money orders increased from Rs. 11,934 in 1897-98 to Rs. 12,603 during the year under review. The increase is small, and is due to the more favourable rate of exchange prevailing during the year.

13. The number of distressed seamen sent home during the year was 27 against 47 in the previous year. The causes of distress were sickness 14, injuries 8, and paucity of employment 5. The local institutions in Calcutta which afford relief to seamen on the largest scale are the District Charitable Society and the Sailor's Home, both of which are largely helped by Government. A considerable number of the inmates of the former are British and foreign seamen, as also of the Government Workhouse, which is in the same premises, and part of the work of both institutions is to find ships for seamen.

14. The Shipping Master, Calcutta, reports that there appears to be no appreciable change in the condition of European seamen. The better class of men reported last year as serving in the merchant ships trading to the port continues, and the appearance of a British sailor unable to read or write is becoming more rare. The demand for lascars continues to increase.

15. At the port of Chittagong the number of seamen shipped and discharged was 42 and 53 against 33 and 95 during the previous year. There is a large decrease in the number of discharges, which is due to a smaller number of ships having paid off their crews.

16. There were 11 deserters, 8 of whom were Europeans and 3 lascars, during the year against 3 during the previous year. This increase is attributed to the higher rate of wages prevailing at Calcutta, viz., £3-5 to £3-10 against £2-5 to £2-15 at which the seamen joined. Three of these deserters were arrested at Calcutta and brought to Chittagong and convicted. One was also arrested at Chittagong and put on board his vessel, the others were not found.

17. The receipts on account of Trust funds amounted to Rs. 3,231 and consisted of deposits received on account of the balance of wages of 12 British and 6 Native seamen discharged by mutual consent; of 22 Native seamen discharged on termination of agreement; of 7 British seamen discharged under medical certificate, and of one deceased.

18. The value of seamen's money orders was Rs. 151 only. One out of the 53 seamen discharged elected to remit his wages to his wife in the United Kingdom.

19. The Shipping Master visited 47 vessels during the year to enquire into the health of crews, and into accidents and casualties happening on board, and for the inspection of provisions, water, medical stores, and forecastle accommodation. No complaints were made regarding bad or insufficient food.

20. No seamen were shipped or discharged at False Point during the year. The Shipping Master paid six visits to vessels in port and found that the provisions, water, and medicines supplied to the crew, as well as the forecastle accommodation, were good and ample, and no complaints were made.

21. At Balasore only one seaman was discharged during the year. There were no casualties or desertions, and no irregularity was noticed in the course of the enquiries made as to the health of the crews and the provisions and water supplied.

22. No transactions under the Merchant Shipping Act are reported to have taken place at the port of Puri.

By order of the Lieutenant-Governor of Bengal,

R. B. BUCKLEY,

Secy. to the Govt. of Bengal.

ERRATUM—No. 4214S.

The 18th August 1899.—In line 10 of paragraph 12 of Resolution No. 4123S., dated the 14th August 1899, published at pages 1408 to 1413 of the Supplement to the *Calcutta Gazette* of the 16th idem, for the words "the work has been taken in hand" *read* "the work of preparing the preliminary estimates has been taken in hand."

E. N. BAKER,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE CUSTOMS DEPARTMENT FOR THE YEAR 1898-99.

FINANCIAL DEPARTMENT.—SEPARATE REVENUE.

Calcutta, the 21st August 1899.

RESOLUTION—No. 4811S.R.

READ—

The report on the Administration of the Customs Department for the year 1898-99.

Read also—

The report of the previous year and Government Resolution thereon.

AN important change was effected in the tariff during the year under review by Act XIV of 1899, which was passed for the purpose of enabling countervailing import duties to be levied on bounty fed articles, and which was made effective against all bounty fed sugar by the orders of the Government of India. The additional duty was, however, not paid before the close of the year, as the orders apply to imports under bills-of-lading signed subsequently to the passing of the Act referred to. The duty on lever boxes was reduced from 5 per cent. to 1 per cent., and machinery and component parts thereof for the manufacture of paraffin candles and for the distillation of spirits and nitrate of soda, muriate of potash, sulphate of ammonia, sulphate of potash and kainit salts, singally and sozille, were exempted from duty. Since the close of the year, all machinery has been exempted from duty, thus removing a fertile source of inconvenience and misunderstanding.

2. The following statement compares the gross and net customs duty collected during the last five years and in the years before and after the remission of the import duties in March 1882.

	1880-81.	1881-82.	1882-83.	1894-95.	1895-96.	1896-97.	1897-98.	1898-99.

Import	3,37,996	3,04,426	3,20,606	3,12,540	3,58,764	3,36,540	3,27,761	4,02,279
Export	71,979	1,95,549	1,16,840	53,842	65,321	69,459	39,390	98,221
Total ...	4,09,075	4,99,975	4,37,476	3,66,381	4,24,085	4,05,999	3,67,151	4,95,500
Total net duty ...	3,14,07,095	3,15,25,843	2,06,50,647	3,48,56,818	4,12,51,355	3,89,37,260	3,85,05,944	3,98,13,193

The total net duty collected during the year rose from Rs. 3,85,05,944 in 1897-98 to Rs. 3,98,13,193, showing an increase of Rs. 13,07,249 or 3·4 per cent. The increase occurred under all the heads, the largest being under export duty, which advanced by Rs. 8,79,389. This is said to be due to the unprecedented contraction in the shipments of rice in the preceding year on account of the famine. There was an increase of Rs. 2,22,924 in the import duty on general merchandise, and Rs. 2,04,936 in the realisation from duty on salt. The charges for the year, inclusive of refunds and drawbacks, amounted to Rs. 13,36,370 against Rs. 12,00,694 in the previous year. The total net receipts, including receipts other than duty, improved from Rs. 3,79,73,556 in 1897-98 to Rs. 3,93,02,058 in the year under review, thus showing an increase of Rs. 13,28,502 or 3·5 per cent.

3. The subjoined table compares the collections of import and export duty on articles other than salt at the different ports in the past two years:—

Import Duty.

Grand Total Trade of the Province...	89,33,46,685	97,34,53,419	6,25,34,777	5,46,84,586	2,62,69,822	2,29,16,286	98,21,51,284	95,10,54,241	.....	3,10,97,043

The total net value of the foreign import trade in merchandise showed a decrease of Rs. 9,16,688 or ·3 per cent. The decrease is exclusively in free goods, there having been an increase in the receipts of dutiable goods. The decrease, however, is very small and calls for no remarks. Owing to

larger receipts of gold from the United Kingdom, Australia and China, there was an increase of Rs. 36,10,186, or 11 per cent., in the imports of treasure. The total value of the stores imported on behalf of Government stood at Rs. 1,80,77,447 against Rs. 2,13,25,189 in the previous year. This decrease is ascribed to smaller receipts of railway materials and metals, chiefly pig iron, which, owing to the rise in prices in England, had to be supplied from the local iron works. The total value of the foreign export trade in Indian produce shows an improvement of Rs. 79,23,289. The improvement was exclusively in dutiable articles and is due to larger shipments of rice and paddy to almost all the importing countries. The value of exports of Government stores fell off by 43 per cent. The decrease was confined to the exports of foreign stores and was owing to the unusually large shipments of copper coin to the Straits Settlements in the previous year. As in previous years, there were no exports of treasure on account of Government. In the coasting trade there was a decline of 26 per cent. and of 7 per cent. respectively, in the value of imports and exports of merchandise. The decrease in the former is attributable to the smaller imports of rice from Burma, and in the latter it is attributable to the falling off of the trade with Bombay, and is confined to oil seeds and jute manufactures. The existence of plague must have affected this branch of the trade of Bengal with Bombay. Including Government transactions, the total value of the trade of the province stood at Rs. 95,10,54,241 against Rs. 98,21,51,284 in the previous year, showing a decrease of Rs. 3,10,97,043 or 3·1 per cent.

5. *Trade of Calcutta with foreign countries*.—The following table shows the total value of the foreign trade of Calcutta with the several countries with which commercial transactions were maintained and the proportion in which it was divided between them during the past five years:—

	1894-95.		1895-96.		1896-97.		1897-98.		1898-99.

Other countries	4,31,17,064	5·95	5,02,02,742	6·75	5,59,81,329	7·32	5,05,80,155	6·62	5,45,60,981	7·09
Total ...	73,25,62,389	100·00	73,87,85,412	100·00	76,86,61,580	100·00	76,43,87,759	100·00	77,20,46,359	100·00

It will be seen that, as usual, the bulk of the trade was carried on with the United Kingdom, but the proportion which this branch bears to the entire foreign trade of the port declined during the year from 53·87 per cent. in 1897-98 to 52·38 per cent. The falling off in value was equivalent to nearly 2 per cent., and the total trade recorded is the smallest since 1892-93. The decrease occurred in both imports and exports. The falling off under imports is chiefly due to the smaller imports of treasure, as there was an improvement in the imports of merchandise, chiefly cotton, woollen and silk goods; while the short despatches of raw jute, jute manufactures, lac, hides and skins, raw silk, saltpetre, woollen manufactures, raw wool, and cotton (raw) account for the decrease under exports. There was a great reduction in the value of tea despatched to the United Kingdom, though the quantity despatched was nearly two million pounds in excess of that of the previous year. Germany has gone ahead of the United States, and occupies the second place in the list; but the total value of the trade shows a decline of 1·6 per cent., as compared with that of the previous year. There was a remarkable reduction in the trade of beet sugar, and it is believed that the additional duties recently imposed on this article from bounty-paying countries will check its growth in future years. The United States occupy the third place in the list. The falling

off was entirely in exports. It is worthy of note that for the first time, the United States supplied themselves with paddy from this port in the past year. As in the previous year, China occupies the fourth place, her share in the trade being 5·86 per cent. against 5·89 per cent. in the previous year. The total value of trade, however, shows a slight advance, equal to ·7 per cent., on the total value of the previous year's trade. The quantity of opium despatched to Hong Kong rose in quantity from 22,771 chests to 23,519 chests, and its value stood at Rs. 2,47,09,110 against Rs. 2,35,06,832 in the previous year. Ceylon comes next and has changed place with the Straits Settlements. The value of trade has risen higher than that of the previous year, showing an increase of 14 per cent. The increase is due chiefly to the larger imports of treasure and is also attributable to heavier exports of grain and pulse and coal. The trade with the Straits Settlements has improved considerably, and shows a percentage of 3 93 against 3·67 in the previous year. It is worthy of note that glass wares were for the first time imported from the Straits. The increase of 29 per cent. in the trade with Australia is attributable to the increased importation of gold and of horses. It is remarkable that out of a total quantity of gold valued at nearly 234 lakhs, about 77 lakhs were received from Australia. No copper, however, was imported from Australia during the past year. The trade with France fell by 8 per cent. This is mainly due to the diminution of exports owing to the smaller despatches of oil seeds, raw jute, hides and skins, and raw cotton. In imports there has been an increase of 46 per cent. which is attributable to larger receipts of silk piece goods and other articles of luxury. The increase of 11 per cent. in the total value of the trade with Austria-Hungary in spite of the large decrease in the exports of raw hides, raw jute, raw cotton, lac and jute manufactures, is accounted for by the transfer to that country of the bulk of the sugar trade lost by Germany and the United Kingdom, and by the larger receipts of woollen and cotton goods, metals, paper and apparel. In the trade with Belgium there was an improvement of 22 per cent. due to larger imports of matches and cotton twist, and to the more extensive shipments of oil-seeds and grain and pulse. The trade with Italy fell by 16 per cent. owing chiefly to the smaller despatches of raw jute, raw cotton and til seed. The improvement of 25 per cent. in the Mauritius trade is attributed to the increased exports of rice and treasure and imports of sugar.

6. *Shipping in Calcutta.*—The proportion which the trade of Calcutta carried through the Suez Canal during the year under review bore to its total foreign trade was 72·6 per cent. as against 73·9 per cent. in the previous year, a unable change clearly due to the increased traffic with Ceylon and South Africa. The table below compares the total shipping entering inwards and clearing outwards without touching at any other port and the aggregate tonnage in the past two years:—

	1897-98.		1898-99.	
	Number.	Tonnage.	Number.	Tonnage.
1	2	3	4	5
Steam vessels	764	1,669,694	851	1,926,893
Sailing „	248	447,218	203	341,181
Native craft	13	2,131	18	2,757
Total ...	1,025	2,119,043	1,072	2,270,831

It will be seen that there was an increase of 87 steam vessels and 5 native craft, and a decrease of 45 sailing vessels representing an advance of 151,788 in tonnage.

7. *Imports into Calcutta.*—The total value of imports including treasure, but excluding Government transactions into Calcutta from foreign countries rose from Rs. 31,11,60,201 in 1897-98 to Rs. 31,46,65,272, showing an increase

of Rs. 35,05,071 or 1·1 per cent. The increase occurred under treasure (Rs. 36,10,186 or 11 per cent.) against a decrease of Rs. 1,05,115 or 0·3 per cent. under merchandise. The total values of the principal articles of merchandise imported into the port during the last two years are shown below:—

	1897-98.	1898-99.
	Rs.	Rs.
Cotton goods	11,73,52,665	13,76,60,884
Twist and yarn	91,05,988	74,84,709
Metals	2,79,42,502	2,23,55,071
Mineral oil	1,67,25,583	1,61,90,957
Machinery (excluding railway plant)	1,37,87,504	99,90,071
Sugar	1,19,99,614	1,06,49,885
Liquor	46,34,700	48,10,527
Salt	67,19,749	51,80,519
Hardware and cutlery	51,00,523	47,81,677
Woollen goods	41,75,327	53,03,524

The total imports of cotton goods, including twist and yarn, exceeded those of the year 1897-98 by about two crores of rupees in value or by 14 per cent. The heavy fall in the value of imports under twist and yarn is attributed to reduced price of the raw material, to the overstocking of the market in consequence of enormous receipts in 1897-98, and to some improvement in the purchasing power of the rupee. As regards the increase under cotton goods the Collector of Customs writes:—

"All this indicates a healthy revival of the cotton trade after the unsatisfactory years 1896-97 and 1897-98, and is attributable to the increasing prosperity of the people, a steadier exchange, and an easier money market. Confidence was early restored, and has been followed by a steady flow of business. The quantity imported is a record for the past decade, though this is not the case as regards the value of the trade In the Lancashire industry almost every mill is reported to have shown a profitable working during the year, and there seems every prospect of a continuance of prosperity in that trade."

The decrease of 19·9 per cent. in metals is ascribed to the increased demand at home and the consequent advance in prices. There was a decrease of 3·2 per cent. in the value of imports of mineral oil as compared with the previous year, though the quantity increased by 2·1 per cent. Russian and United States oils made a slight progress; but the trade in Sumatra received a check in the year under review, and it is said that many of the wells there which were yielding very large supplies have been exhausted, while others which are still working are yielding a reduced quantity. The Collector of Customs believes that this result is only temporary. Machinery and mill work fell off by 27·5 per cent. The decrease is attributed to the absence of demand for new machinery. As anticipated by the Collector of Customs in the previous year's report, the articles imported consisted chiefly of "spares" and "renewals," and it is said that the local foundries and Railway Workshops now make a variety of articles formerly obtained from abroad. The Collector of Customs observes that paper and flour industries show no signs of requiring more machinery, but the development of electric lighting and motive power may be expected to lead to further importations. Sugar shows a decrease of 6·9 per cent. The decrease was shared by the United Kingdom, Germany, China, Straits Settlements and other countries, while Austria-Hungary, Mauritius and Java show a material increase. Act XIV of 1899 for dealing with bounty-fed articles did not come into force till the 20th March 1899 and hence the new duties have not affected imports during the year under review.

The increase of 24·7 per cent. in the importation of ale, beer and porter is attributed to the return of the European troops whose messes are supplied with English beer from Calcutta, from the frontier expeditions during which the trade was diverted to Karachi. "Pilsener" Beer which is said to include all brands called by that name, whether made in England or on the continent has maintained the first place. Next comes "Ind Coope" followed by "Tennant," "McEwan" and "Bass." "Younger and Sons" has fallen from the second to the ninth place. A new brand, that of Fraser and Company, has gained a good position during this its first year and comes next to to "Younger and Sons." The improvement of 6 per cent. in the imports of

spirits and liquors was shared by all descriptions of spirits with the exception of gin. In brandy there was an increase of 3,568 gallons, owing to larger imports from the United Kingdom and France. The total importation of wine has fallen from 115,706 gallons in 1897-98 to 109, 715 gallons, showing a decrease of 5·1 per cent. The decrease occurred in claret (6,701 gallons), port (317 gallons), and sherry (848 gallons), while champagne and other wines increased by 350 gallons and, 1,525 gallons respectively. The falling off of 13·9 per cent. in the Salt trade both in the imports from foreign countries (except Egypt which shows slight increase) and from Indian ports is said to be due to the abnormally high imports of the preceding year and the consequent overstocking in bond. Hardware and cutlery fell by 6·2 per cent. owing to smaller receipts from the United Kingdom, as there was an accumulation of stocks due to heavy importations from that country during the two preceding years. Continental manufactures nevertheless advanced by more than 51 per cent. owing, it is said, to their low prices, and close resemblance to British goods. In woollen goods there was an improvement of 27 per cent. The import trade in these goods seems to have partially recovered from the effects of the famine of the two previous years; but it is still considerably below the average. Amongst other imports matches improved by 6·6 per cent. and apparel by 4·9 per cent.; while agricultural implements declined by 32·6 per cent. drugs and medicines by 8 per cent. and umbrellas by 25·4 per cent. The use of matches locally made was generally discontinued. The imports of umbrellas from other countries than the United Kingdom have almost ceased.

8. *Exports from Calcutta.*—The total value of exports from Calcutta to foreign countries, including treasure, but excluding Government transactions, rose from Rs. 45,32,27,558 to Rs. 45,73,81,087, an increase of Rs. 41,53,529. The value of the trade in the principal exports in 1897-98 and 1898-99 is compared in the table below:—

	1897-98.	1898-99.
	Rs.	Rs.
Jute, raw	9,52,93,179	6,41,35,484
Jute gunny-bags ...	3 67,97,541	3,35,62,035
Opium	3,89,39,565	4,31,81,485
Tea	7,64,72,151	7,56,53,974
Oilseeds	2,83,52,999	4,05,98,627
Rice	2,62,12,760	4,23,60,709
Indigo	1,75,51,045	1,87,05,530
Hides and skins	4,17,17,531	3,82,58,162
Wheat	3,71,510	1,62,00,154
Raw cotton	65,81,118	67,69,890
Lac	1,06,15,262	85,59,711
Silk, raw	49,77,274	44,30,413

The total exports of raw jute decreased in quantity by 35·4 per cent. and in value by 33·6 per cent. This is attributed to the diminution in the area of land cultivated with jute during the year and the consequent short crop. The Collector of Customs writes:—

"The published forecasts of the past season's crop were not favourable. Both the area under cultivation and the outturn per acre were estimated to be considerably below the average, and that estimate seems to have been fully justified. Climatic influences further prevented the proper germination and healthy development of the plant; and, as a consequence, the crops were not only insufficient but also unsatisfactory and of light weight and vastly inferior to the outturns of previous years. The diminution in the area cultivated with jute was due to larger areas being utilized for food-crops, to replenish stocks after the famine and in the expectation of obtaining high prices for rice—an expectation which was, however, disappointed in consequence of the abundant harvest everywhere. A better jute crop is expected this year."

Smaller exports were made to the United Kingdom, Austria-Hungary, France, Germany, Italy, Spain, and the United States, while China, Japan and Australia took larger supplies. In jute gunny-bags there was a falling-off of 8·5 per cent. mainly due to the short jute crop, and also, it is said, to the scarcity of labour in the jute mills owing to the plague scare. In the total exports of opium there was an increase of 8·8 per cent. due to the larger shipments to the Straits, Hong Kong, and Cochin China. The exports of tea increased by over four million pounds or 2·8 per cent. owing to larger shipments

to all the importing countries except Australia, Cape Colony, and the Straits. The production of the last year was the largest on record. The majority of the teas of the past year have been of common grades; and the average price stood at 8 annas 1 pie per lb for the year against 8 annas 5 pies in 1897-98. The price per lb. has now gone back to the average of the 5 years preceding the great rise of 1894-95. The growth of the consumption of Ceylon tea in the United Kingdom was suddenly checked in the past year. In oilseeds there was an increase of 54·7 per cent. Among these, linseed the principal article of export, increased by 83·8 per cent. owing to larger shipments to the United Kingdom France, Germany, and Holland. Poppy seed also advanced by 17·8 per cent. while rape and til, the other seeds exported, declined by 22·7 per cent. and 96·8 per cent. respectively. There was a marked improvement in the total shipments of rice and paddy equal to 83·5 per cent. over the previous year, the result of an abundant rice harvest in Bengal during the past year. Larger supplies were taken by all the consuming countries, with the exception of Réunion and China. In indigo there was an increase of 14·5 per cent. due to increased outturn and to a reduction of stocks in the home market. The average selling price, however, as declared in the shipping bills, shows a further decline from that of the previous year, having fallen from Rs. 180 to 168 per maund. The Collector of Customs observes:—

> The unsatisfactory state of the market, brought about by over-production in previous years and by the consequent retention of large stocks in the home markets, to which a number of producers shipped direct in the hope of securing better prices that never came, coupled with the fact that the bulk of the production of subsequent seasons has been of unsuitable or inferior qualities, has been further accentuated during the last year or two by the scare about the production of artificial indigo, at a much lower price than had been thought possible, by the Badische Company in Germany. This, it is known, was, however, being produced at a loss; and as it is now said to be less suitable than the natural dye for many purposes, the scare has, for the present, ceased. Happily, however, this scare has now worked itself out, as the synthetic or artificial indigo, the product of German laboratories, has been found unsuitable for many purposes, and it will not, therefore, seriously interfere with the natural dye.

The export of raw hides, the largest item under the head of hides and skins, decreased by 13 per cent owing to heavy shipments of those articles to the continent of Europe and America, from the Cape of Good Hope, where there was a great mortality in cattle due to rinderpest. The decline of 9·3 per cent. in dressed hides is attributed not only to smaller supply, but also to a smaller demand. There was, however, an increase of 9·3 per cent. in raw skins due to larger supplies to the United States. The quantity of wheat exported during the year was nearly 46 times larger than in the previous year owing to the abundant harvest of the year under review. This was due to the great but temporary rise in price, occasioned by the Spanish-American war, and by speculation in the States. The trade in raw cotton with Austria-Hungary increased by 205·8 per cent., with Belgium by 281·5 per cent., with Germany by 17·4 per cent., with China by 19·1 per cent., and with Japan by 263, while the trade with the United Kingdom fell away by 28·7 per cent., with France by 60·4 per cent., with Italy by 42·9 per cent., and with other countries by 38·8 per cent. The total exports of raw cotton were 12·5 per cent. in excess of those of the previous year. The exports of shellac decreased in quantity by 23 per cent. owing to shorter despatches to all the importing countries with the exception of the United States. The decrease in the value of the exports is attributed to the limited demand for the established and more expensive marks. There was a falling-off of 2·3 per cent. in the exports of raw silk as compared with 1897-98. The trade with the United Kingdom fell by 26·4 per cent., while France and Italy took 25·1 per cent. and 32·1 per cent. more than in 1897-98. The quantity exported to "other countries" also increased by 268·3 per cent. The Collector of Customs observes:—

> There can be no doubt that the greater care now taken in the reeling of Bengal silk is causing it to be more generally used, and is opening out new outlets for it. But the industry has to contend with the dire disease, pebrine, which well nigh ruined sericulture in France. The Europeans interested in the trade have for a long time been trying to induce the native rearers to adopt Pasteur's system of seed-selection and rearing, but with very little success. The Committee now working at Berhampore have, however, succeeded in interesting a few rearers in that system, and it is to be hoped that the success which these rearers have had

with their worms will induce others to take it up. Owing to the ravages of pebrine during the year under review, the total quantity of cocoons produced was less than in the preceding year. As, however, the European filatures took almost the same quantity as before, the production of native reeled-silk suitable for local consumption was considerably reduced.

In the important districts of Malda and Rajshahi the interest taken in the new methods is much more intelligent and keen than it is in Berhampore, and the Lieutenant-Governor from what he saw there has reason to hope that the protection given by these methods will lead to a rapid expansion of an ancient industry.

9. *Treasure.*—The increase of 38·1 per cent. in the value of the net imports of gold and silver combined was, it is said, due, to a certain extent, to the excess of exports of Indian produce over imports into it, to an improvement in the exchange value of the rupee and to the unfavourable exchange between Australia and England. The importation of gold increased by 46·4 per cent., while there was a decrease of 22·8 per cent. in the imports of silver. The exports of gold were nominal, and there was a decrease of 36·5 per cent. in the exports of silver owing to smaller supplies to every country except Mauritius.

10. *Subordinate Ports.*—The total value of the foreign trade of the port of Chittagong fell from Rs. 81,50,349 to Rs. 68,25,931, showing a decline of Rs. 13,24,418 or 16 per cent. This took place both in imports (44 per cent.) and exports (8 per cent.) and is attributable chiefly to smaller receipts of salt from the United Kingdom and of railway materials for the Assam-Bengal Railway, and to non-receipt of kerosene oil from America, as well as to the absence of shipments of raw jute to Dunkirk and the diminished exports of tea. The exports of rice, however, advanced owing to the good crop of last year. The imports of liquors from foreign and Indian ports rose by 12·2 and 12·3 per cent. respectively. In the coasting trade, the imports largely diminished owing to smaller receipts of raw jute from Narayanganj, while larger shipments of country goods, viz., grain and pulse to Akyab, mitigated by a smaller shipment of treasure to Calcutta and Rangoon, raised the value of the exports.

The total value of the trade, both foreign and coasting, at the Orissa ports, as compared with 1897-98, decreased at Balasore from Rs. 1,45,67,116 to Rs. 1,44,95,217 and at Cuttack from Rs. 27,63,354 to Rs. 26,41,553, while at Puri it rose from Rs. 4,61,219 to Rs. 6,00,912. The net amount of Customs duty, inclusive of the duty on imported salt collected at the Orissa ports, however, rose from Rs. 5,91,736 to Rs. 6,02,704, showing an increase of Rs. 10,968 or 1·8 per cent. The improvement is chiefly attributed to larger collections made on account of export duty at all those ports.

The trade at Narayanganj, which is carried on, as usual, with coast ports only, fell from Rs. 60,40,026 to Rs. 45,47,277, showing a decrease of Rs. 14,92,749 or 24 per cent. This was the combined effect of a decrease of Rs. 16,37,414 or 28·3 per cent. in exports and an increase of Rs. 1,44,665 or 56·2 per cent. in imports. Salt was the only dutiable article imported into this port and the duty on it rose from Rs. 7,15,777 to Rs. 9,89,103, showing an increase of Rs. 2,73,326, or 38·2 per cent. The trade in kerosene oil re-appeared and the quantity imported was 317,084 gallons during the year, but large supplies are said to be still obtained by other routes from Calcutta. The exports of rice increased by 2,413 cwt. or 41 per cent. The decline in exports from Narayanganj is said to be partly due to a short crop of jute and partly to the cheaper rates of freight charged by the direct inland service of steamers to Calcutta by which route raw jute was shipped to Calcutta in preference to Chittagong.

11. The Lieutenant-Governor's thanks are again due to the Board of Revenue and the Collector of Customs for their supervision of the Department during the year. The report of its operations is as usual full of interest. The names of the officers who have been favourably mentioned by the Board will be communicated to the Appointment Department

By order of the Lieutenant-Governor of Bengal,

E. N. BAKER,

Offg. Secy. to the Govt. of Bengal.

WORKING OF THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT, I OF 1893, IN THE HOWRAH MUNICIPALITY DURING THE YEAR 1898-99.

No. 4247M.—The 19th August 1899.—The following report is published for general information in accordance with the provisions of section 41 of the Licensed Warehouse and Fire-Brigade Act, I of 1893.

E. N. BAKER,
Offg. Secy. to the Govt. of Bengal.

ANNUAL REPORT FOR 1898-99 UNDER THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT, I OF 1893, AS AMENDED BY ACT I OF 1894.

Dated Howrah, the 1st July 1899.

From—F. W. DUKE, ESQ., Chairman, Howrah Municipality,
To—The Magistrate, Howrah.

I HAVE the honour to report that 263 warehouses were licensed in 1898-99 of the 334 registered during that year against 297 of the 394 registered in 1897-98, the details being as follows:—

YEAR.	Jute.	Cotton.	Straw.	Wood	Hay.	Total.	REMARKS.
1	2	3	4	5	6	7	8
Registered 1897-98	30	39	92	230	3	394	Exemptions under Notification No. 2853M., dated the 14th August 1893, account for the difference between the number of registered and licensed warehouses.
Ditto 1898-99	33	32	76	190	3	334	
Licensed 1897-98	28	32	56	178	3	297	
Ditto 1898-99	28	28	50	154	3	263	

The apparent falling off in the number of warehouses was owing to both the closed and the opened ones in 1897-98 being shown as existent in the previous report, as the closed ones were not struck off the license register during that year.

2. The income from license fees during the year under report amounted to Rs. 5,977, of which Rs. 658 were collected on account of arrears for 1897-98 and Rs. 154 represent the increment from 22 new licenses. In the year 1897-98, the collection amounted to Rs. 5,388, of which Rs. 307 accrued from arrears of 1896-97. There was thus a substantial increase of Rs. 589 in the gross income of 1898-99 over the income of the previous year.

3. The demand, collection, remission and balance of 1898-99 are shown in Appendix A, and the details of licenses granted in this year to jute and cotton warehouses are entered in Appendix B. Owing to the comparative unimportance of the 207 licenses granted for the storage of straw, wood and hay in 1898-99 against 237 in the previous year, they have not been entered in Appendix B, and it may be noted that such licenses have only been levied under the Fire-Brigade Act since July 1893, prior to which they were levied under section 261 of the Bengal Municipal Act.

4. There were 43 prosecutions, which realised Rs. 60-8 against 54 in the previous year, which realised Rs. 45, but 23 of the prosecutions in the year under report were withdrawn on payment of fees and costs.

5. The expenditure incurred in assessing and collecting license fees amounted to Rs. 863-7:—

	Rs.	A.
Salary of general supervisor and assessor	500	0
Salary of inspector	175	0
Commission of inspector	75	0
Salary of clerk	67	15
Peon	45	8
Total ...	863	7

6. The fire-brigade establishment, as hitherto, remained under the control of the Commissioner of Police, Calcutta. The fire-brigade station in Howrah stands in a very central position north of the municipal market, and from a wooden stage raised over it the whole town is overlooked. There were 12 fires during the year, the details of which are given in Appendix C: besides these there were four other petty fires, at two of which the fire-brigade attended, and two were extinguished by the residents of the localities.

7. The Commissioner of Police demanded Rs 3,340 for the maintenance of the fire-brigade in 1898-99, and this amount was remitted to him during the year.

APPENDIX A.

Statement showing the demand, collection, remission, and balance in Howrah on account of contributions for the fire-brigade during 1898-99.

12	16th ,, ...	Do.	1 hour 45 ,, ...	50	Portions of three small golputta huts.

N.B.—In addition to these fires, four other petty fires occurred. The fire-brigade attended two of these fires, and the remaining two were extinguished by the residents of the locality.

CALCUTTA,
The 4th May 1899.

F. J. HALLIDAY,
Offg. Deputy Commissioner of Police.

WEATHER AND CROP REPORT.

For the week ending the 21st August 1899.

Burdwan.—Rainfall at Sadar 1·55, Kalna 2·86, Katwa 1·27, Raniganj 1·91. Weather seasonable. Transplantation of *aman* paddy is over. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa decreasing. Common rice selling as follows:—

	Srs.	
Sadar	18	per rupee.
Kalna	15 1/16	
Katwa	15¾	
Raniganj	15¼	

Birbhum.—Rainfall at Sadar 1·70, Rampur Hât 1·21. Weather hot. More rain needed Rice sells at Sadar and Rampur Hât 15 seers per rupee. Fodder sufficient.

Bankura.—Rainfall at Bankura 1·39, Vishnupur 1·72. Weather sultry with occasional showers. Weeding operations going on. Prospects of crops excellent at present. Fodder and water sufficient. No cattle-disease reported. Rice selling at Bankura 17¾ seers and at Vishnupur 17½ seers per rupee.

Midnapore.—Rainfall at Sadar 1·10, Contai 1·43, Tamluk 3·87, Ghatal 4·61. Prospects of sugarcane, jute, flax and *aus* paddy favourable. Transplantation of winter paddy going on; prospects good except at Sabong and Tamluk. Grass-hoppers reported from some places in thana Midnapore, and cattle-disease from Salboni. Common rice sells as follows:—

	Srs.	CH.	
Sadar	16	0	per rupee.
Contai	16	0	
Tamluk	14	3½	
Ghatal	17	0	

Hooghly.—Rainfall at Sadar 2·27, Serampore 2·.5, Jahanabad 2·19. Transplantation of *aman* paddy continues. State of jute and sugercane not good in places. Slight damage to *aman* reported on low lands in Khanakul and Pursura in the Jehanabad subdivision. Common rice selling at 14 seers per rupee.

Howrah.—Rainfall at Sadar 2·22, Ulubaria 2·97. Weather hot and cloudy with occasional showers. Transplantation of *aman* progressing briskly. Prospects hopeful. Fodder and water sufficient. Condition of cattle good. Common rice sells at 13¾ seers per rupee.

24-Parganas.—Rainfall at Sadar 1·29, Barasat 1·04, Basirhat 5·15, Diamond Harbour 5·75. Weather hot and cloudy with occasional rain. Prospects of the winter rice crop in the Diamond Harbour subdivision have decidedly improved; at Barasat prospects of transplanted *aman* are fair; at Basirhat prospects are good on high lands; at Sadar prospects are not favourable. Transplantation of *aman* going on briskly. *Aus* being harvested. Cattle-disease reported from thana Hasnabad in the Barasat subdivision. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	12 to 16	per rupee.
Barasat	15	
Basirhat	16	
Diamond Harbour	13¼	

Nadia.—Rainfall at Sadar 1·98, Kushtia 4·22, Meherpur 3·78, Chuadanga 3·58, Ranaghat 2·52. Weather seasonable. Harvesting of *aus* and steeping of jute going on. Prospects of standing crops good. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Kushtia	14	
Meherpur	14¼	
Chuadanga	15	
Ranaghat	14	

Murshidabad.—Rainfall at Sadar 3·74, Jangipur 5·89, Kandi 1·22. Weather cloudy and hot. Transplantation of *aman* nearly finished. Harvesting of *bhadoi* still going on. Indigo and jute being cut. Mulberry doing well. Paddy in some places in the Sadar subdivision is under water on account of excessive rain and floods. No cattle-disease. Fodder insufficient in Daulatabad police-station. Common rice sells at Sadar 14 seers, Jangipur 15 seers, and Kandi 17 seers per rupee.

Jessore.—Rainfall at Sadar 5·71, Jhenida 3·13, Magura 3·48, Narail 6·70, Bangaon 1·04. Weather cloudy, rainy and damp. Harvesting of *aus* paddy going on. Prospects of crops tolerably good. Insects still appear in the Narail subdivision. Rivers are rising. No cattle-disease reported. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16	per rupee.
Jhenida	16	
Magura	18¾	
Narail	15	
Bangaon	17	

Khulna.—Rainfall at Sadar 4·91, Bagirhat 7·09, Satkhira 2·63. Weather variable. Transplantation of *aman* going on. Harvesting of *aus* commenced. Insects still damaging paddy in some parts. Cattle-disease reported from Rampal. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16½	per rupee.
Bagirhat	17	
Satkhira	14	

Rajshahi.—Rainfall at Sadar 3·36, Nator 6·44, Naugaon 10·2. Prospects of crops fair. Steeping of jute and transplantation of *aman* going on. No cattle-disease. Fodder and water ample. Common rice sells at 17 seers per rupee.

Dinajpur.—Rainfall at Sadar 18·21, average 11·35. Weather still unsettled. Standing crops on low lands suffering from excess of water. No cattle-disease. Fodder and water sufficient. Rice selling at 17 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 9·04, Alipur Duars 6·71. Weather seasonable. Harvesting of *bhadoi* paddy and transplantation of *haimanti* paddy still going on. Prospects favourable. Cutting and steeping of jute going on. Fodder and water ample. Common rice sells at 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 6·92, Kalimpong 3·94, Siliguri 11·46. Weather seasonable. *Hills—Kalai* and *phaphar* being sown; *Bhutta*, *chota* and *bara marua*, *bhadoi* and *haimanti* paddy progessing. *Terai—Bhadoi* paddy, jute and sugarcane doing well; *haimanti* paddy being transplanted; *jamira* being cut and threshed. Coarse rice sells as follows:—

	Srs.	
Hills	10	per rupee.
Terai	15	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 11·65, Gaibanda 9·99, Kurigram 13·51, Nilphamari 8·99. Weather very rainy. Sowing of winter rice and steeping of jute going on. Prospects good. Common rice selling at 17 seers 14 chitaks per rupee. Fodder and water sufficient. Cattle-disease prevailing in some villages in thana Jaldhaka.

Bogra.—Average rainfall 8·85. *Aus* being harvested. Cutting of jute and transplantation of *aman* still going on. Prospects good. Fodder and water sufficient. Common rice sells at 17 seers per rupee.

Pabna.—Rainfall at Sadar 3·82, Sirajganj 9·22. Weather cloudy and rainy. Prospects of standing crops good. *Aus* being still harvested. Common rice sells at 15 seers 15 chitaks per rupee. Rivers rising again.

Dacca.—Rainfall at Sadar 12·08, Manikganj 9·98, Munshiganj 4·42, Naraingani 8·50. Weather seasonable. Prospects of standing crops good. Fodder available. No cattle-disease. Common rice 18 seers per rupee.

Mymensingh.—Rainfall at Sadar 3·01, Netrokona 6·04, Jamalpur 6·52, Tangail 2·37, Kishorganj 6·58. Weather seasonable. Prospects of crops good. Condition of people and cattle good. Fodder and water ample. Common rice sells as follows:—

	Srs.	
Sadar	20	per rupee.
Jamalpur	18	
Tangail	17½	
Kishorganj	19	
Netrokona	22-10	

Faridpur.—Rainfall at Sadar 7·31, Goalundo 4·76, Madaripur 4·09. Weather seasonable. State and prospects of crops fair. Common rice selling at 17 seers per rupee.

Backergunge.—Rainfall at Sadar 5·59. Weather seasonable. Prospects of crops fair, but *pamari* insects in places. Transplantation of *aman* has begun. Common rice sells at 16 seers (*aman*) and 20 seers (*aus*) per rupee.

Tippera.—Average rainfall 6·65. Weather seasonable. Jute cutting and steeping going on. *Aus* being harvested. Prospects of *aman* continue favourable. Common rice 20 seers per rupee.

Noakhali.—Prospects of crops fair. Transplantation of *aman* and harvesting of *aus* going on. Slight cattle-disease reported from Chagalnaya. Fodder and water sufficient. Common rice—*aman* 17½ seers and *aus* 20 seers per rupee.

Chittagong.—Rainfall 10·26. Weather seasonable. Reaping of *aus* continues. Transplanting of *aman* progressing. Prospects good. Common rice 15 seers per rupee. Water and fodder sufficient.

Patna.—Rainfall at Barh 13·56, Bikram 6·87, Dinapore 6·92, Hilsa 5·25, Bihar 7·26. The rain has done much damage to the standing *bhadoi* crops Transplantation of paddy continues. Condition of cattle fair. Green fodder and water for cattle plentiful. Common rice in Patna sells at 14 seers per rupee.

Gaya.—Rainfall at Sadar 4·77, Jahanabad 8·38, Nawada 4·32. Transplantation of paddy continues. Prospect of *bhadoi* not good. Common rice selling at 12½ seers per rupee.

Shahabad.—Rainfall at Sadar 6·60, Buxar 5·28, Bhabua 4·85. Transplantation of paddy progressing.

Saran.—Rainfall at Sadar 10·91, Siwan 10·39, Gopalganj 8·16. Weather generally cloudy. Excessive rain damaging the prospects of *bhadoi* crops seriously. Transplantation of paddy going on. Average price of common rice 13 3 seers and of *makai* 19·10 seers per rupee.

Champaran.—Rainfall at Motihari 6·10, Bettiah 8·18, Barharwa 8·04, Bagaha 8·19, Ramnagar 7·34. *Bhadoi* crops damaged by heavy rain, and no chance of a good outturn. Prospects of *aghani* good. *Kodo* and early rice being harvested. Price of common rice 13 seers and of maize 20 seers per rupee.

Muzaffarpur.—Rainfall at Sadar 11·78, Hajipur 9·57, Sitamarhi 5·94, Transplantation of rice crop still in progress. Low land paddy injured to some extent by the recent heavy rain. Prices are—Common rice 12 seers, wheat 15 seers, barley 20 seers, *makai* (new) 17 seers, gram 18 seers, *rahar* 20 seers, and *marua* (new) 20 seers per rupee.

Darbhanga.—Rainfall at Sadar 10·55, Samastipur 11·41, Madhubani 10·08. Weather cloudy and rainy. The heavy rain has been very detrimental. Transplantation of paddy is still in progress. Weeding of *bhadoi* crops going on. Fodder and water sufficient. Cattle-disease reported from a village in the Samastipur subdivision. Common rice selling at Sadar 12 seers per rupee.

Monghyr.—Rainfall at Monghyr 8·86, Begusarai 6·71, Jamui 5·90. Weather hot, cloudy and rainy. Transplantation of winter rice going on. Prospects of paddy and sugarcane good. *Bhadoi* seriously damaged. Common rice sells as follows:—

	Srs.	
Monghyr	11	per rupee.
Begusarai	12	
Jamui	11	

Bhagalpur.—Weather hot and cloudy. Rainfall at Sadar 6·79, Banka 4·65, Madhipura 12·29, Supaul 9·09. The rain will benefit the *aghani* paddy. Transplantation drawing to a close. *Bhadoi* being reaped, outturn poor. Prices show a tendency to go up.

Purnea.—Rainfall at Sadar 16·17, Kishanganj 12·32, Araria 8·27. Weather seasonable. Harvesting of *bhadoi* paddy and jute going on briskly. Transplantation of *aghani* progressing. Condition of cattle good except at Kaliaganj, where cattle-disease, known as *dhodhopa*, has broken out. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	14	per rupee.
Kishanganj	15	
Araria	16	

Malda.—Rainfall at Sadar 7·58, Gajol 7·87, Shibganj 7·08. Weather cloudy with occasional rain. *Bhadoi* paddy being reaped with good result. Transplanting of winter rice nearly finished. Cattle-disease reported from Manikchak. Price of coarse rice (*bhadoi*) 17 seers per rupee. Fodder for cattle sufficient.

Sonthal Parganas.—Weather cloudy and hot. Prospects of paddy good. Indian-corn reported poor. No cattle-disease reported. Fodder and water sufficient. Average price of common rice 13 seers 5 chitaks and of Indian-corn 18 seers 4 chitaks per rupee.

Cuttack.—Rainfall at Sadar 1·03, Jajpur 2·50, Kendrapara ·54, Banki 1·36, False Point 3·98. Weather hot and seasonable. *Sarad*, jute, *haldia* cotton and sugarcane are growing. *Beali* being cut in places. *Sarad* and *beali* being damaged by insects in places. Rain wanted. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

	S.	ch.	
Cuttack	15	12	per rupee.
Jajpur	17	1	
Kendrapara	19	0	
Banki	16	13	

Balasore.—Rainfall at Sadar ·72. Weather hot. Weeding, puddling and transplanting of *sarad* continue. *Beali* being reaped in places. Sugarcane thriving well. More rain wanted. Rice sells at 18¼ seers per rupee in the interior, and at 17 and 18 seers per rupee at Balasore and Bhadrak respectively. Fodder and water sufficient.

Angul.—Rainfall at Sadar 1·03 and Bisipara 1·02, but not equally distributed throughout. It has kept the crops alive in parts where rain fell. Highland paddy suffering and puddling and transplantation suspended for want of rain. The state of crops in the Khondmals reported as before. Common rice sells at 24 seers per rupee at Sadar and 12 seers in the Khondmals. Great anxiety felt for want of rain throughout the district. Fodder sufficient.

Puri.—Rainfall at Sadar 1·27, Khurda 1·77. More rain wanted. *Beali* damaged to some extent. Puddling and weeding of *sarad* delayed for want of sufficient water. Condition of sugarcane, *mandia*, and other miscellaneous crops good. Fodder sufficient. Cattle-disease continues in some parts. Common rice sells as follows:—

	S.	ch.	
Sadar	17	11	per rupee.
Khurda	17	1	
Interior of the district	16	11	

Hazaribagh.—Rainfall at Sadar 1·27, Giridih 2·87. Weather seasonable. Prospects of *bhadoi* crops not favourable. More rain wanted to complete paddy transplanting. Common rice sells at 13 seers per rupee.

Ranchi.—Rainfall 1·82. Weather hot and cloudy. More rain wanted for transplantation. *Gondli* being harvested. Rice sells at Ranchi 15 seers per rupee and in the interior 18 seers. No cattle-disease. Fodder and water sufficient.

Palamau.—Rainfall 1·03. Weather hot and cloudy. Standing crops generally doing well. No cattle-disease. Rice sells at 15 seers per rupee.

Manbhum.—Rainfall at Sadar 1·05, Gobindpur 1·04. Weather hot. Prospects of crops generally good, but rain is wanted in places. Cattle-disease reported from thanas Tundi and Nirsha. Fodder and water sufficient. Average price of common rice at Sadar 16½ seers and at Gobindpur 15 seers per rupee. Supply sufficient.

Singhbhum.—Rainfall 3·58. More rain is wanted. Common rice sells at 17¼ seers per rupee.

General Summary.—During the last week rain has fallen in every district, but while it has been excessive in Bihar, North and East Bengal, it has been scanty in Orissa and the Chota Nagpur Division. In Bihar all chance of a fair *bhadoi* harvest has disappeared. The rice crop is progressing well everywhere save in Orissa, and the report from the 24-Parganas is better. In the Khondmals the deficiency in the rainfall has caused serious anxiety. Early rice is being harvested, and jute cutting is going on. The price of rice has not materially changed since last week.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

The average pressure of the corresponding period for 24 years, Surveyor-General's Office		29·587
		Hours.
The total number of hours of bright sunshine		13·5
The maximum possible number of hours of sunshine		90·0
The mean temperature of the seven days		84·3
The average temperature of the corresponding period for 24 years, Surveyor-General's Office		83·1
The extreme variation of temperature		17·0
The maximum temperature		92·1
		Miles.
The highest velocity of the wind in one hour		12
		°
The mean relative humidity		86
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office		87
		Inches.
The total fall of rain from 13th to 19th August 1899		2·02
The average fall of the corresponding period for 24 years, Surveyor-General's Office		3·74
The total fall from 1st January to 19th August 1899		55·80
The average fall of the corresponding period for 24 years, Surveyor-General's Office		43·62

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder; w, strong wind; g, gloomy.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 21st August 1899.

G. W. KUCHLER,
For Meteorological Reporter to the Govt. of India.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled under the provisions of the Indian Councils Acts, 1861 and 1892.

THE Council met at the Council Chamber on Monday, the 7th August, 1899.

Present:

The Hon'ble SIR JOHN WOODBURN, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*
The Hon'ble NAWAB BAHADUR SYUD AMEER HOSSEIN, C.I.E.
The Hon'ble MR. W. B. OLDHAM, C.I.E.
The Hon'ble MR. R. B. BUCKLEY.
The Hon'ble MR. C. W. BOLTON, C.S.I.
The Hon'ble MR. E. N. BAKER.
The Hon'ble RAI DURGA GATI BANERJEA, BAHADUR, C.I.E.

The Hon'ble RAJA RANAJIT SINHA BAHADUR, OF NASHIPUR.
The Hon'ble MR. D. F. MACKENZIE.
The Hon'ble MR. J. G. APCAR.
The Hon'ble DR. ASUTOSH MUKHOPADHYAYA, M.A., D.L., F.R.A.S., F.R.S.E.
The Hon'ble BABU BOIKANTA NATH SEN.
The Hon'ble BABU SURENDRANATH BANERJEE.

CALCUTTA MUNICIPAL BILL.

The Hon'ble the PRESIDENT read the Hon'ble MR. BAKER'S motion that the Calcutta Municipal Bill be referred back to the Select Committee for further consideration with reference to the correspondence between the Government of India and the Government of Bengal, which was published in the supplement to the *Calcutta Gazette* of the 12th July, 1899, and with instructions to report within two weeks.

The Hon'ble BABU SURENDRANATH BANERJEE, by leave of the President, moved the following amendments to the above motion, viz.—

(*1*) *for* "two weeks" *substitute* "six weeks";

(*2*) *add* at the end the words "and that the opinions of the Corporation and other public bodies be invited with reference to such correspondence."

He said:—"Sir, my first words will be words of regret at the retirement from this Council of my friend Babu Norendranath Sen. I do not in the smallest degree desire to make any reflection upon my hon'ble friend to my left who so worthily represents the Corporation, and in whose hands I am sure the interests of the rate-payers of Calcutta in regard to the Calcutta Municipal Bill will be perfectly safe. But the tide of human circumstances sometimes demands a tear from us. *Hinc illæ lachrymæ*—sang Virgil in the olden times. Those who were associated with Babu Norendranath Sen in his arduous labours in connection with the early stages of the Calcutta Municipal Bill must share the regret that he has not been permitted to participate in their toils and anxieties amid the closing scenes of the final struggle.

"However that may be, now that we have been placed once again by a fortunate accident in possession of our deliberative functions, if we have made a mistake, we may rectify it, if we have acted, I will not say in defiance of, but if we have acted not in conformity with, the dictates of public opinion, we may now pay that ampler homage to public sentiment which, as it seems to me, is imperatively called for at our hands in dealing with a measure such as this, affecting as it does the habits and every-day lives of the people; for a municipal measure is essentially a measure of sanitation, and in order that it may be successful, that it may promote the great ends of sanitation, it must enlist the sympathies of the people on its side. By no stretch of language, however, can it be said that the Municipal Bill, even as revised by the Select Committee, has secured the sympathies or the support of the community, whom it most deeply affects. On the contrary I will say this—that in the whole course of my public life, now extending over the space of nearly a quarter of a century, I have not witnessed a measure which so profoundly stirred the hearts and excited the apprehensions of the people of Calcutta as this Bill has done. Their apprehensions may be well-founded or ill-founded—I believe them to be well-founded—but there they are—real, intense, deep-seated, influencing the thought and moulding the feelings of the people, driving them in their thousands to those great public meetings held all over the town with a view to record their protest against this measure. A protest so real and so influential and at the same time so universal and so all-pervading, a responsible Government could not ignore. It is with thankfulness we note that the action of the Government of India has been determined by the attitude of public opinion. I may or I may not be able to assent to the proposals of the Government of India. I am afraid I cannot assent to them; but all the same I feel that I should be false to myself and to my representative character if I did not place on record the expression of my admiring gratitude for the spirit in which that Government have approached the consideration of the subject, the temper of the discussion, the sensibility to public opinion which their intervention at this stage indicates, and above all for the desire by which they are actuated and which pervades every line of the despatch, to arrive at a settlement that shall be conducive to the efficiency of municipal administration in Calcutta, and yet at the same time preserve intact the great principle of Local Self-Government. As in the past so in the future, I hope and trust Your Honour's Government and the Government of India will be pleased to extend to our observations that indulgent consideration which both these Governments are accustomed to

accord to the temperate expression of responsible opinion. In that hope and in that confidence I approach the consideration of this subject. Could I persuade myself to believe that the Government of India has definitely made up its mind, that it is inexorably wedded to the opinions it has expressed, and that it is inaccessible to the voice of reason and remonstrance, I for one would not waste my breath nor waste the time of the Council in a vain endeavour to persuade. But I know that the Government is highly deferential to the expression of public opinion, to the clear and unerring dictates of reason and sound sense, and, therefore, it is that I have taken upon myself the task of entering upon a somewhat prolonged discussion of the issues raised in the letter of the Government of India.

"The letter of the Government of India begins with a statement of the principal grounds, as summarized by the Government of Bengal, upon which the amendment of the Calcutta Municipal Law is based. To three of these grounds I desire to call attention, because in the first place they seem to me to be important grounds which are now published for the first time. In the second place they seem to be absolutely unsustainable. They make a revelation in respect of which it will be my duty to ask my hon'ble friend in charge of the Bill to make some sort of an explanation."

The Hon'ble the PRESIDENT said:—"I apologise for interrupting the Hon'ble Member, but this is a point of order. I cannot permit any discussion of the reasons given by the Government of India at the beginning of their letter. The point to which we are limited is the discussion of the changes in the Bill which the Government of India have desired should be made. I cannot allow any discussion of the reasons which have led the Government of India to come to their decision.

The Hon'ble BABU SURENDRANATH BANERJEE said:—"With your permission I desire to make one observation, namely, that the grounds to which I desire particularly to call the attention of the Council are grounds which do not appear in the letter of the 7th March, 1898. These grounds are absolutely new; therefore they are not covered by Your Honour's ruling that these matters have been decided."

The Hon'ble the PRESIDENT said:—"I regret I can hear no discussion on that point."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"That being the ruling of Your Honour, I shall proceed to lay before you statements which have been made in the letter of the Government of India, statements which are open to challenge and contradiction, and therefore it seems to me that, having regard to such statements, a case has been made out for the appointment of a Commission of Enquiry."

The Hon'ble the PRESIDENT said:—"This is a point which has been discussed in Council before. I must ask the Hon'ble Member to proceed with the remainder of his speech. These are points which I cannot allow to be re-opened."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I want to suggest that in the letter of the Government of India there is one matter which raises a point which I think admits of discussion. The Government of India say that the broad principles of Local Self-Government are to be preserved, but that they are to be so re-cast as to check abuses and secure the continuity of administration. If abuses are to be discovered and to be checked, the best way of discovering and checking them is by the appointment of a Commission of Enquiry."

The Hon'ble the PRESIDENT said:—"I must repeat that that point has been discussed and decided by the Council, and I cannot permit it to be re-opened."

The Hon'ble BABU SURENDRANATH BANERJEE continued :—"I bow to Your Honour's decision and will leave that point. The Government of India in the 7th paragraph of their letter say:—

'The Government of India cannot fail to realise that they have a special responsibility in this case. It would be strange indeed if they did not feel a peculiar interest in a measure affecting the municipal constitution of a city, which is not merely the capital of the Province of Bengal, but also the seat of the Imperial Government and the capital of the Indian Empire. They are deeply persuaded of the importance of a local administration, which shall adequately represent the various great interests that have placed, and still keep, Calcutta in its premier position in India, and which shall be businesslike, efficient, and free from scandal or reproach. At the same time it would be their natural desire, in the interests both of continuity of administration and of public harmony, to see these objects attained, not by any contravention of the broad principles of Local Self-Government already conceded, but by a curtailment of the abuses to which in practice they may have become exposed, and by a restriction within limits suggested by experience, of the range of their future operation. In these opinions the Government of India are convinced that they have the sympathy of the Lieutenant-Governor.'

"As I read this paragraph I take it to mean that no changes in the present municipal system of Calcutta are to be introduced which would be in contravention of the broad principles of Local Self-Government already conceded. If I am able to show that the proposals of the Government of India are in direct conflict with their avowed policy and the principle which they here lay down, I am entitled to ask the Government for a re-consideration of their detailed proposals. [The Hon'ble the PRESIDENT said :—"That is a perfectly legitimate argument."] What then, Sir, are those broad principles of Local Self-Government which have already been conceded and which I contend have not only been assailed but completely superseded by the proposals of the Government of India? These principles may be classified under three heads:—

"In the first place, the paramountcy of the Corporation was affirmed. The Corporation was declared to be the one supreme authority in the adminstration of municipal affairs, fixing the rates, controlling expenditure, regulating finance, making the superior appointments, in short, controlling, guiding, supervising the affairs of the town. This was no new concession. The paramountcy of the Corporation had been recognized in the constitution of the Corporation under the Justices. The principle was only re-affirmed in 1876. In the second place, and this I regard as the dominating feature of the great concession of 1876, the rate-payers of Calcutta were now for the first time allowed to elect their own representatives in the proportion of two-thirds of the entire number of the Corporation. In other words, the Government of Calcutta, the control of its municipal affairs, was for the first time definitely entrusted to the representatives of the rate-payers. This was the cornerstone of the great system of 1876—the essence of the broad principles of Local Self-Government that were then conceded—and it is this cardinal feature of the system which is now seriously menaced by the proposals of the Government of India. Lastly, as a safeguard, because the Government had parted with its powers and functions in this matter, the Government claimed and asserted the right of control over the Municipality, a control, however, which was to be exercised from without and not from within. These were the three broad principles—especially the second—that formed the prominent features of the concession of 1876. Now the proposed system of co-ordinate authorities is in direct conflict with the paramountcy of the Corporation. Make the Chairman and the General Committee co-ordinate authorities, make the representative Corporation possessed of only certain definite powers, and the supremacy of the Corporation is at an end. With regard to this matter, I must say that the letter of the Government of India gives a very uncertain sound. Nowhere does the Government of India distinctly approve of the system of co-ordinate authorities; nowhere does it disapprove of it, though it quotes with approbation the strong expression of opinion from the dissenting members, where they speak of an emasculated Corporation recently in possession of supreme authority, viewing with uneasiness, if not with jealousy, the establishment of co-ordinate authorities. I hope the principle of co-ordinate authorities has been abandoned. I hope the Hon'ble Member in charge of the

Bill will be able to give us that assurance. I hope he will not tell us that the passage is quoted with a view to show that in the absence of homogeneity there will be friction, there will be a conflict and a collision of interests, and that therefore the popular element in the Corporation must be curtailed. Then as regards the powers of control reserved to the Government under this Bill, the Government of India is in perfect agreement with the majority of the Select Committee. I thought it was possible that there was one feature in the recommendations of the Select Committee which would not commend itself to the approval of the Government of India. The Select Committee provided that, notwithstanding an appeal to the Government of India against the orders of the Government of Bengal, the injunctions and orders of the Local Government in regard to the works which were the subject of appeal should be carried out and the works proceeded with. I find that in regard to this part of the Bill the Government of India is in perfect agreement with the majority of the Select Committee. Let me ask what is the good of an appeal, if the works are to be proceeded with?

"Suppose the appeal is successful, but that in the meantime the works have been carried out, that would mean so much waste of time, labour and money. I hope this part of the Bill will be re-considered. As regards the powers of control, they have been rendered far more stringent under the Bill, and the proposed changes in the law have been approved by the Government of India. I will not repeat the arguments which I have already urged from my place in the Select Committee. These provisions are apparently based upon the English Public Health Act, but they go much beyond the scope of the English Act. Under the English Public Health Act, the control of the Local Government Board is confined to sanitary measures. Under the Bill the control of the Local Government may extend to *all* matters, sanitary or otherwise. Under the English Public Health Act the Local Government Board can only interfere upon complaint made—that used to be the Municipal Law of Calcutta. Under the Bill the Local Government may interfere upon its own motion without any complaint of any kind being made. Under the English Act the Local Government Board can only realize the sum actually due from the defaulting local body. Under the Bill the Government may raise the rates and may even contract a loan. It is thus very evident that the powers of the Government over the Municipality will be largely added to, while, as I have hope to be able to show, the authority of the representatives of the people will be practically extinguished.

"But it is the proposals of the Government of India to reduce the number of Commissioners and to confine the reduction exclusively to the elected branch of the Corporation that seem to me to completely supersede the concessions made in 1876. They restrict, and indeed practically abolish, Local Self-Government in Calcutta. To reduce the number of Commissioners is to restrict the diffusion of local interest. To reduce the elected element in the Corporation so as to place it to a hopeless minority is to lay the axe at the root of the system of Local Self-Government in Calcutta.

"In the first place let me address myself to the proposal for the reduction of the number of Commissioners. Jeremy Bentham has observed in his Theory of Legislation that when a change in the law is proposed, it is incumbent upon those who propose the change to make good their case. All the more is this duty incumbent upon them, when the change proposed affects a scheme of legislation which is of long standing, which is consecrated by prescription, and which has come to be bound up with the civic life of the people. Now ever since there has been a Corporation in Calcutta, extending over a period close upon forty years, the number of Justices or Commissioners, for the members of the Corporation were known under these two names at two different periods of their history, was never less than 72 and sometimes exceeded 120. From 1863 to 1876 the municipal affairs of Calcutta were controlled by the Justices. Their number, unlimited at first, was over one hundred in 1876. When the Corporation was re-constituted upon an elective basis in 1876, the number was fixed at 72, and that was the number from 1876 to 1888. In 1888, when the Municipal Law was revised, the number was raised to 75, though with an extensively added area which was now for the first time included within the

jurisdiction of the Municipality. Thus from 1863 to 1899, for a period extending beyond the life-time of a generation, the number of Municipal Commissioners has never been less than seventy-two and has sometimes exceeded one hundred. Look at the question from another point of view. No Lieutenant-Governor from 1863 to 1899 ever recommended the reduction of the number to what is now proposed by the Government of India. Many Lieutenant-Governors, possessed of the largest local experience and intimately acquainted with our municipal affairs, have expressed themselves in favour of the higher number of 72 or 75. If, therefore, in spite of what has been the accepted constitution of the Corporation ever since there has been a Corporation, in spite of the overwhelming consensus of opinion on the part of responsible rulers of the province, it is proposed to reduce the number, the change can only be justified on the strongest grounds supported by the clearest necessity. A mere desire to correct an illogicality of form will not do. The reasons must be so self-evident, so palpable, so overwhelmingly impressive in their character as to carry home conviction to the most untutored mind. Have we such reasons disclosed to us in the letter of the Government of India? Let us examine the letter somewhat closely. The Government of India say in the 13th paragraph of their letter:—

'The Government of India have been struck, in their examination of the grounds advanced both by Sir Alexander Mackenzie and Sir John Woodburn for the measure, by the allegation that the existing Corporation has devoted itself to speech and to criticism rather than to action. This charge, while doubtless to some extent due to the temper and spirit in which it has approached its work, is in the main to be attributed to the considerable and, as it would seem excessive, numbers of the municipal body. Their numerical strength, when viewed in regard either to the number of electors by whom the majority are returned, or to the experience of municipal institutions elsewhere, seems to be disproportionately and unnecessarily large. There can be no reason why a number of voters returned as only 13,890 out of a total ward population estimated at about 650,000, or a proportion of little more than 2 per cent., should return as many as 50 members; or why the interests of a city even of over 681,000 inhabitants should require the services of 75 Commissioners for their proper protection. The Government of India are disposed therefore to think that a most effective, though hitherto unsuggested, check upon the abuses and anomalies complained of might be found in a reduction of the numerical strength of the Corporation.'

"The Government of India say that the Commissioners are devoted to criticism rather than to action; and with a view to prevent the waste of time in frivolous talk, it is deemed necessary to reduce the number of Commissioners. I respectfully venture to join issue with the Government in this statement of facts. I go further and I contend that even if the facts were such as they are represented to be, they would involve no reflection on the character of the Corporation, for, by its constitution, the Corporation is a deliberative body; its business is to discuss, to criticize and to resolve upon action. There never was a greater authority on municipal affairs than Sir Henry Harrison—to him belongs the unique honour of being quoted by the friends as well as the opponents of this Bill,—and he says that 'the Executive alone can push on the works.' But I respectfully decline to accept the statement that the Commissioners are given to criticism rather than to action. If that were so, how are we to account for the magnificent sanitary works which have changed the face of Calcutta and have made it, despite the plague, one of the healthiest cities in the Province? Again and again has this been brought against the Corporation, and as often it has been refuted. Many of the eminent men, who, from time to time, have presided over the deliberations of the Corporation, have defended it against an imputation which it has not deserved. We all remember Mr. Lee, whose early death we so deeply deplore, and the very last words which he said from his place as Chairman—words to which his early death has imparted a pathetic interest—were these:—

'Less frequently now than of old, because the outside public is better acquainted with the facts, but still, occasionally, we hear insinuations that much time is wasted in this hall by long speeches from the Municipal Commissioners. No charge could be further from the mark. In all my experience—and that has covered full three years—I have seldom listened to a speech that has not been useful and to the point. I can hardly recall a single instance in which I have made the reflection that the speaker was throwing no new light on his subject and was simply speaking to make a speech. The facts, indeed, are conclusive. In the

course of the year you held some 30 general meetings. All the proceedings of every Committee meeting, of which some 250 are held in the course of the year, come before you in this hall for review. A single Committee will frequently deal with 20 or more separate matters, and you have on the average to review proceedings of such Committees at each, single meeting in this hall, so that you dispose of sometimes 120, seldom less than 40, items of business at a sitting. How long do you take over it? As a rule, between one and two hours! Who could say with fairness that that is excessive? How many similar deliberative bodies in the world are there that would dispose of the work in less time? The general rule that we endeavour to observe is not to speak without special knowledge and clear opinion, and then to express our thoughts in language as brief as we can make it.'

"I would like to repeat with Mr. Lee the question—'How many deliberative bodies in the world would dispose of work in less time!' The same charge has been brought against deliberative bodies of even higher status and dignity, and has been dismissed as unworthy of notice. Let me quote the observations of Sir Henry Fowler in the recent debate in Parliament on the Calcutta Municipal Bill:—

'He was not sure that the Mother of Parliaments was free from that objection. But with the Englishman who understood the working of Parliamentary and Municipal life and Local Self-Government in all its ramifications, those objections would not weigh in the least against the general principle of enlisting the people in their own Self Government.'

"Even if it were admitted for argument's sake that there were prolonged debates in the Corporation which involved waste of time, is the remedy to be found in the reduction of the number of elected Commissioners? Here, again, I am able to rely upon the high authority of Sir Henry Harrison, who was of opinion that the matter of number was immaterial, that there would be only a few Commissioners, the leading Commissioners, who would speak and the others would be quiet listeners. Sir Henry Harrison, speaking in the course of a debate in this Council on the 4th February, 1888, said:—

'At the same time I attach very little importance to this point. I do not believe there will be any practical difficulty in working, whether the number of Commissioners be 75, or 60, or 80, because we know that the time taken up by discussion does not depend on the total number of Commissioners present, but upon those Commissioners who wish to speak, and in a Corporation of even 40 members, the leading Commissioners would, for the most part, be returned, and these would take an active part in the discussion as at present. I do not think that in this respect there would be any great difference in a body of 40 members, and a Corporation of 80 Commissioners, of whom 15 or 16 would, as a rule, take part in the discussions. Practically, therefore, I attach little importance to the number of the Corporation. We only revise the work of the Committees in general meetings of the whole body of Commissioners.'

"My own experience entirely confirms the opinion of Sir Henry Harrison, and, if so, the reduction of the number, looked at from this point of view, is wholly unnecessary.

"Then it has been said the number is excessive when viewed in connection with the experience of similar institutions elsewhere. Here, again, I find myself at variance with the facts as stated by the Government of India. I hold in my hand a statement which shows that in some of the great towns in the United Kingdom with a less number and a less homogeneous population, the number of Commissioners varies from sixty-four to over one hundred. I will read from the table:—

Names of towns.	Population in 1896.	Number of Municipal Commissioners.
Glasgow	705,052	78
Edinburgh	276,514	41
Manchester	529,561	104
Birmingham	501,241	72
Liverpool	632,512	64
Sheffield	347,278	64
Leeds	402,449	64

"Looking at the figures which I have just read, and having regard to the population of Calcutta, which is over 650,000, and is certainly more diversified than that of any of the English towns to which I have referred, it cannot be said that the present number of Commissioners is excessive as compared with those of other towns.

"Then, again, it has been said that the number of Commissioners is large as compared with the paucity of voters. The fact is lost sight of that we have no universal suffrage here, and the qualifications of voters are determined by law. Every rate-payer is not a voter. It is only those who pay rates and taxes to the extent of Rs. 24 a year who are entitled to be voters. You lay down an artificial limitation and then you find fault with the system. The representative character of the Ward Commissioners is, however, not to be judged by the number of those who vote for them. They represent the rich and the poor alike. I would remind the Council of that well-known provision in the Municipal Law which allows poor house-owners to claim a lower percentage of valuation. These applications are all sent to the Ward Commissioners for their opinion. These men have no votes. They are far too poor to have any votes. The Ward Commissioner is their representative as well as that of the richer voters in the ward.

"I am free to admit that the question of number is one more or less of opinion. But whether as regards the number or the strength of the representative element in the Corporation, you cannot lose sight of the past history of Calcutta or the policy which the Government has hitherto pursued. If we had a *tabula rasa*, we might inscribe on it what we pleased. But Calcutta has a municipal history, and that history has created associations and ideas in the public mind which no responsible legislator can ignore. Municipal institutions, like all other institutions, are a matter of growth. Our municipal institutions, though English in their origin, have taken a firm root in the Indian mind, because they are so entirely in accordance with our ancient institutions, the panchayet system and the village communities. Any violent change involving a disturbance of these institutions along the lines in which they are accustomed to move would be a shock to popular feeling which no Legislature can ignore. I should be false to myself and to my representative character if I did not say from my place in this Council that the proposals of the Government of India as regards the reduction of the number of Commissioners, and especially as regards the strength of the representative element, have excited the deepest alarm and apprehension in the public mind. We argue somewhat in this way—it may be that we argue in our ignorance or in our innocence—but the line of argument we adopt is somewhat as follows:—If it is considered necessary to cut down talk by reducing the number of Commissioners, why apply the pruning-knife to the elected branch of the Corporation and keep intact the number of nominated Commissioners? The nominated Commissioners can talk just as much and just as eloquently and sometimes just as tediously as the elected Commissioners, as my hon'ble friend Mr. Oldham will be able to say. If the object be to curtail talk, there ought to be a reduction all round; but instead of that, it is the elected element alone that is to be cut down.

"Distasteful as the reduction of the number is, it is the curtailment of the elected element in the Corporation, while the number of official and nominated Commissioners remains the same, which has filled the community with alarm and astonishment. Here again the orders of the Government of India involve a violent disturbance of the municipal traditions of Calcutta. Ever since the Corporation has been reorganized upon a popular basis, the rate-payers have enjoyed the right of electing two-thirds of the entire Corporation. Sir Richard Temple was indeed prepared to go further. He was willing to raise the proportion of elected Commissioners to three fourths of the entire number, if the Legislature agreed to fix the number of Commissioners to be elected by the different nationalities. The matter again came up for consideration in 1888, when the municipal system of Calcutta was revised. There were two conflicting proposals. Mr. Irving, representing the Trades Association, moved in this Council for the reduction of the number of Commissioners to 60 and the representative element to one-half. Babu Kalinath Mitter moved that the number be raised to 80 and that three-fourths of the entire number be elected by the rate-payers. The Government objected to both the proposals and the spokesmen of the Government were Sir Henry Harrison and the late Mr. Colman Macaulay. Sir Henry Harrison observed:—

'I think we ought to follow the old lines as laid down in the Bill, which allows two-thirds of the Commissioners to be elected by the Wards, and I therefore trust the Council will on the fullest consideration adhere to the proposals before them in the Bill.'

"You must not imagine that the arguments of Sir Henry Harrison were based upon mere sentimental considerations, or that he was actuated by the mere desire to preserve what is old. What he said in effect was this—that if the number was reduced and if the elected element was reduced to one-half, the business would suffer, for it would be difficult to get the European Commissioners to attend. He, therefore, objected to Mr. Irving's proposal, not on sentimental but on practical grounds of the highest moment. Let me in this connection quote the remarks of Mr. Colman Macaulay, who for many years was Secretary to Government in charge of the Municipal Department, and afterwards became Chief Secretary :—

'I oppose the amendment of the Hon'ble Mr. Irving on the ground that it involves the contraction of both the principle of election and that of representation.'

"Again :—

'I think that, looking to the experience we have had of the working of the elective system as a whole, we should be fully justified, were we in the position of our predecessors, the legislators of 1876, in taking the proportion of two-thirds elected by the rate-payers. For this reason I will certainly oppose my friend the Hon'ble Mr. Irving's amendment.'

"It is now proposed to undo the past, to discard the lessons of the past, and to deprive the rate-payers of Calcutta of the proportion of representation which they have hitherto enjoyed with the full concurrence of the Government since 1876, and which even Sir Alexander Mackenzie did not want to deprive them of If the object be to strengthen European representation, surely it is not necessary to curtail Indian representation in the Corporation. There are the European wards which may elect European representatives ; there are the special European constituencies which may return European members ; and there is the Government with its reserve power of nomination which may appoint European Commissioners. I have a complaint to make against the European community and the Government in this matter. The European community has not availed themselves of the opportunity created for them by the Government, and the Government has not exercised the power it possesses of balancing inadequate European representation. If the Government and the European community had done their duty in the matter, the complaint of inadequate European representation would never have been heard. And surely a law cannot be said to have failed when it has not been fairly tried. This is what Sir Henry Harrison said in 1888 from his place in this Council :—

'And then as regards the power of nomination this gives a power which the Government has never used to the fullest extent. It has never so used the power of nomination exclusively to strengthen the motive power in the Corporation, and this ought to be tried before the fundamental proportions are changed.'

"But, Sir, it has been said that the reduction in the proportion of the elected element in the Corporation follows the Bombay model. The words used are that 'the Bombay model is faithfully reproduced except as regards numbers.' Here, again, I am constrained to dispute the position of the Government. But if it were otherwise ; if the proposals of the Government involved a faithful imitation of the Bombay model, which they do not, even then I should be disposed to object. What have we got to do with the Bombay municipal system? The municipal history of Bombay is different from ours. Its traditions are not our traditions. We are proud of our municipal system, the product of the wisdom and statesmanship of distinguished Bengal Civilians. It is very much in advance of the Bombay system. In Bombay only one-half of the members of the Corporation are elected by the rate-payers ; here in the Calcutta Corporation two-thirds of the members are returned by the rate-payers. In the municipalities in the interior of the Bombay Presidency only one-half of the members are elected ; in our municipalities in the interior two-thirds of the members are elected. In the Bombay Presidency as a rule, the municipalities in the *moffasil* do not elect their Chairmen ; in Bengal as a rule they elect their Chairmen. Are we to be deprived of a precious right which we have learnt to value and to cherish merely to satisfy the demands of logical precision ? Logic is a great art, but it scarcely enters into the calculations of the legislator. If it is illogical to have two-thirds of elected representatives in the Corporation and only one-third in the General Committee, why not meet the requirements

of logic by raising the proportion of elected members to two-thirds of the entire body in the General Committee? If the demands of logical necessity may be satisfied by a downward as well as by an upward movement, why prefer the downward movement? Is that consistent with the dignity and the statesmanship of the Government of India? As a dissenting member of the Select Committee, I have recorded a strong protest against the introduction of the Bombay system. But if the Bombay system is to be forced upon us, let us have the system in its entirety, with its good and bad features, with its defects as well as its points of excellence. I venture, however, to challenge the position that we have a faithful reproduction of the Bombay system in the proposal of the Government which I am now considering. Let us examine the facts:—

"There are 72 Commissioners in the Bombay Corporation, elected and nominated, as follows—36 elected at the ward elections, 16 elected by the Justices, 2 elected by the Chamber of Commerce, 2 elected by the University, and 16 appointed by the Government. The wards, I think, we may fairly take it, are Indian constituencies; the University and the Justices are also Indian constituencies; the bulk of the Justices and the bulk of the Fellows being Indians. There are 572 Justices, of whom 335 are Indians; there are 342 Fellows of whom 208 are Indians. Therefore we have this fact, that the wards are Indian constituencies, the Justices and the University are Indian constituencies; and these three constituencies between them return 54 out of 72 Commissioners, or three-fourths of the entire Corporation. Will that be the case in connection with the constitution of the Calcutta Corporation under the orders of the Government of India? I say no; and I am sure you will say no, when you have heard me. The Calcutta Corporation, as it will be reconstituted in accordance with the proposals of the Government of India, will consist of members who will be nominated and elected as follows:—25 Commissioners will be elected by the rate-payers, 10 will be returned by special constituencies, and 15 will be nominated by the Government. The 25 Commissioners elected at the ward elections will be Indians; I take it that they will be Indians, though I don't think they will all be Indians; for the European wards, after this unhappy strife, will make serious efforts to return European representatives; but I will take it for argument's sake that the 25 elected Commissioners will be representative of Indian interests. The 10 members returned by the special constituencies will be Europeans, and the 15 appointed by the Government will be representative of interests other than those of the Indian rate-payers. Thus in a Corporation of fifty members, with the official Chairman, the representatives of the rate-payers will be in a minority, and if the European wards return European representatives, the popular element will be in a hopeless minority. In the Bombay Corporation the representatives of the Indian rate-payers are in a majority; in the Calcutta Corporation, as it is now about to be reconstituted, the representatives of the Indian rate-payers will be in a minority, and perhaps in a hopeless minority. Is this, I ask, a faithful reproduction of the Bombay system?

"Let us for a moment examine the bearing of this important change upon the broad principles of Local Self-Government. What is Local Self-Government but the administration of local affairs by the representatives of the local public? But what becomes of Local Self-Government when the representatives of the people are reduced to a hopeless minority—to a condition of pitiable importence—in the body that controls the municipal affairs of the town? And what is the justification for these far-reaching changes? No charge of inefficiency has been brought against the Corporation of Calcutta. On the contrary, eminent Lieutenant-Governors have testified to the ability and zeal of the Commissioners and to the continued success of municipal administration in Calcutta. Sir Henry Fowler, speaking from his place in the House of Commons, observed in February last that he discovered no evidence of the break-down of the system. I am bound to say that the Bill as now revised by the Select Committee is distinctly worse and more retrograde than the Bill submitted in April last. That Bill vested the power of the purse in the representatives of the people. The deliberation of large questions also belonged to them. All this power and authority will now be gone. They will not control finance or regulate expenditure. The rates and

taxes will not be fixed by them. Their voice will be impotent for good or evil. The Hindu and Muhammadan rate-payers pay the bulk of the taxes, but their representatives will have no hand in determining how they are to be spent. The result will be disastrous to the ends of economical administration. It is a universal truth, confirmed by the experience of mankind, that the strongest security of the public purse is its control vested in the representatives of the rate-payers. When you have to spend other people's money you are apt to be extravagant. When you spend your own money you have the strongest motives to be economical, and the successful administration of the finances of the Calcutta Corporation is a conspicuous example of the truth of this remark. When it is borne in mind that finance is the backbone of every form of administration, municipal or otherwise, I have no hesitation in saying that it is a perilous experiment to deprive the representatives of the rate-payers of that financial control which they have hitherto exercised, with so much credit to themselves and benefit to the public.

"I have just a word or two to say with regard to the constitution of the General Committee as it will be affected by the orders of the Government of India. The constitution of the General Committee has been the subject of considerable criticism both here and in England. I cannot say that the alterations proposed by the Government of India in the smallest degree help the rate-payers or improve their position. In the Bill, as originally revised by the Select Committee, the representatives of the rate-payers on the General Committee were four in number out of a total of twelve. In the Bill, as further revised by the Select Committee, the number is still four. Of the twelve members of the General Committee, eight indeed will be elected by the Corporation, four being appointed by the Government. But these eight members are to be elected in accordance with the constituent elements of the electoral body, consisting of elected and nominated Commissioners in equal proportions, and this has been interpreted to mean that of the eight Commissioners to be elected by the Corporation, four are to be elected and four are to be nominated Commissioners. Thus, Sir, as in the Corporation, so also in the General Committee, the representatives of the rate-payers will be in a hopeless minority.

"These are the observations which I desire to make on the letter of the Government of India. I would now call attention to the terms of my amendment. I am sure the Council will consider my amendment to be reasonable, having regard to the important nature of the changes proposed. Probably my hon'ble friend in charge of the Bill will say that there are only two or three questions which have to be considered, viz., the constitution of the Corporation, the constitution of the General Committee and of the Special Committees. These in themselves would be questions of sufficient importance to need careful consideration. But that is not all. I would refer the hon'ble Member in charge of the Bill to paragraphs 7 and 8 of the letter of the Government, from which it will appear that the Government is of opinon that Sir Alexander Mackenzie's Bill is not in accordance with the broad principles of Local Self-Government, and the whole Bill will have to be considered in the light of those principles. The Government of India say:—

'In the course of the passage of the Bill through its various stages, much criticism has been bestowed upon it from many quarters; and, while a good deal of this criticism has been of only ephemeral value and has rested upon no solid foundation, the Government of India have been led, after a careful and independent investigation, to think that there are features in Sir Alexander Mackenzie's Bill which are not in entire accordance with the principles just laid down and which might not in practice ensure that amicable and patriotic co-operation of all parties in the future municipal government of the city which is essential to its efficient administration.'

"I would in this connection call attention to paragraph 20 of the letter of the Government of India regarding the constitution of Committees and Sub-Committees. This is a matter of considerable difficulty and requires much careful thought. This is what the Government say:—

"I am also to suggest that it might be desirable to lay down rules for the appointment of the Special Committees and Sub-Committees which would secure their being truly representative, in respect of their constituent elements, of the Corporation or General Committee appointing them. The provisions regarding the making of rules and bye-laws for the conduct of the business of Special Committees and Sub-Committees under sections 89A and 590, in

connection with sections 595 and 597, might be extended to include their constitution in general agreement with the principles already laid down. It might not be necessary or feasible for all such Special Committees and Sub-Committees to be homogenous in constitution with the body appointing them; but it is clear that in some cases at least such homogeneity alone would secure efficiency and obviate friction.

"I therefore hope that Your Honour's Government will see its way to accept my motion. A few weeks' delay in the passing of this Bill will not be time wasted, if it gives the public an opportunity for considering a measure of this magnitude and importance.

"I do not know that I should be justified in further detaining the Council. His Excellency the Viceroy has expressed the hope that there may now be a truce to all dissension, and he has appealed to our patriotism to vindicate the cause of Local Self-Government in the capital of the Indian Empire. An appeal addressed to our patriotism, coming from so exalted an authority and from a Viceroy whose utterances have been so sympathetic, is bound to make a deep impression upon our minds. But a higher patriotism—the love that we owe to our country, the duty that binds us to the Government—demands that we should raise our voices in terms of earnest protest and remonstrance against proposals which are inconsistent with the wisdom and the policy of the Government and will wreck the best prospects of Local Self-Government in the capital of the Indian Empire. How can we vindicate Local Self-Government, when Local Self-Government will be at an end! How can there be any amicable co-operation on our part when a cherished institution is laid low to the ground! We have learnt to value Local Self-Government. We love it; we cherish it; the fond devotion of a people clings to it. It has stimulated our public spirit. It has inspired us with a sense of responsibility and that moderation which never fails to follow in the train of responsibility. It is a noble seminary of popular and political education. We have derived from it inestimable benefits, and we desire to transmit it, unsullied and unimpaired to our children and our children's children. With such an aspiration the Government of this country must sympathize. Far be it from us to wish to exclude our European fellow-citizens from their legitimate share in the administration of our municipal affairs. Their interests and our interests are in many respects common. But they cannot wish us to be Uitlanders in the city of our birth. We shall indeed be worse than Uitlanders; for the Uitlanders never had the franchise—we are to be deprived of the franchise that we possessed. It has always been the crowning glory of the British Government never to withdraw a privilege which it has once conferred. There have no doubt been temporary aberrations, like the eccentricities of the planets; but the Government has soon resumed its steady career of beneficence and progress. I trust, Sir, it will be our high privilege to be able to associate Your Honour's administration and that of His Excellency the Viceroy, if not with the expansion, at any rate with the preservation of an institution which while it has contributed to the sanitary improvement of Calcutta, has stimulated the public life of the people and has helped the cause of popular and political education which it is one of the avowed objects of the Government of India to foster and to promote.

The Hon'ble MR. MACKENZIE said:—"May it please Your Honour,—I rise, Sir, to oppose the amendment proposed by the Hon'ble Babu Surendranath Banerjee on the ground that postponement will make it impossible to pass the Bill this session, and I consider it detrimental to the best interests of Calcutta that legislation should be longer delayed. In the Note of Dissent, signed by two Hon'ble Members of the Select Committee, and largely referred to by the Government of India in their recommendations to the Government of Bengal, complaint is made that 'The Bill, as amended, makes little or no change in the constitutional part of the Bill as originally introduced, *and that* only as regards two matters has any concession been made in this part of the Bill, and the last of these concessions is nullified by the powers reserved to the Government.' From that view, Sir, I differ entirely. I find that very considerable changes have been made by the Select Committee, and, but for the 'powers reserved to the Government,' I have no hesitation in saying that I for one would not be

in the position I am in of being able to give my vote in support of the measure. Government control, however, is an engine only to be brought into play on great occasions, and cannot be called upon for every-day purposes. In my opinion, Sir, the only practical way to increase the 'motive power' in the proceedings of the Corporation would be to largely increase the powers of the Chairman, empowering him to do, and holding him responsible for doing, all the ordinary work of the town; the General Committee acting as an advisory or consultative Board, the main body of the Commissioners being restricted to a quasi-legal function. To restore to the Corporation the power of electing the high officers of the city merely opens a door for canvassing and jobbery, which has not been wanting in the past.

"To this extent, Sir, I have to deprecate the action of the Select Committee in their dealings with the Bill. As to the necessity for the introduction of radical changes, there can be no reasonable doubt; but if doubt did exist, perusal of the letter from the Government of Bengal to the Government of India, dated 7th March, 1898, would dispel it. Much capital has been made in various quarters, in which the Bill is opposed, of 'the blow at the root of Local Self-Government.' Perusal of the 'precis of opinions' (Papers 2 to 35) will show that this is the universal 'war cry' of the opponents of the Bill at their public meetings in the Town Hall, and in each of the several 'Wards'; and more astonishing still it presents itself as the 'bogey' of the Government of India in its recent correspondence with the Local Government regarding the Bill. Speaking of these public meetings, I may say that there is nothing to show that the same set of people were not present at each and all of these meetings, whipped up to constitute themselves, for the time being, political agitators to swell the importance of the opposition. In fact, Sir, in Paper No. 7, we find one of the Wards (No. 8) appointing by 'Resolution' delegates to the number of 79 to attend the public meeting held at the Town Hall on 31st August, 1898. But, Sir, be that as it may, this Bill, as its title indicates and as its provisions show, is distinctly a Calcutta Municipal Bill, and for my part, I have never seen or heard anything quoted to controvert the arguments adduced by Mr. Risley in his speech in this Council Chamber on 4th April, 1898—that the argument as to its being the death-blow to Local Self-Government in Calcutta is absurd for the reason that one of the chief limitations of the Government of India's Resolutions on the subject of Local Self-Government is 'that it does not apply to Presidency towns.' Now, Sir, when I first read the Government of India's letter No. 93, dated Simla, 17th June, 1899, addressed to the Bengal Government and read in page 7 of that letter, the reference to 'the broad principles of Local Self-Government already conceded'; and again in paragraph 21 of the said letter where it refers to the necessity to 'vindicate the wisdom of the decision that 23 years ago first accorded the privileges of Local Self-Government to the Capital of the Indian Empire,' it occurred to me that either the Government of India or this Council had been seriously misled, and I set myself to enquire into the matter, with the result that I find the Government of Bengal never so much as asked for or recommended Local Self-Government for the Capital of the Indian Empire; and that its application to that Capital was expressly excluded by the Government of India's own Resolution No. 17, dated 18th May, 1882, paragraph 4, from which I quote as follows:—

'Meantime, however, it will be convenient that the Governor General in Council should explain somewhat more fully than he has hitherto done, the general mode in which he would wish to see effect given to the principles of Local Self-Government throughout British India outside the Presidency towns.'

"But, Sir, of course the reference to the concession having been made 23 years ago, shows that while the Resolution of the Government of India, dated 18th May, 1882, expressly excludes Presidency towns, we have the somewhat phenomenal position presented to us of what is expressly forbidden in the present having been conceded in the past. To examine the position 23 years ago, one has to go back to the Proceedings in this Council extending from December, 1874, to April, 1876, and from a careful perusal of the record of the debates on the measure at that time before the Council, I have come to

the conclusion that, as regards Local Self-Government said then to have been conceded, the most ever asked for by the late Hon'ble Babu Kristo Das Pal, to quote his own words, on 3rd April, 1875, was—

'If it was advisable to give the citizens of Calcutta the right of Self-Government, they ought to have it fully and unreservedly. But then the question would arise, suppose the elective system be conceded, should the Chairman be elected by the representatives of the town, or should his appointment rest with the Government? Now there could be no thorough elective system unless the Chairman's appointment were also made elective,' &c., &c.

"Then on 26th February, 1876, the late Hon'ble Babu Kristo Das Pal spoke as follows:—

'The rate-payers of Calcutta could not but be grateful to His Honour the President for the liberal announcement he had made in announcing that he was willing to give them the privileges of Self-Government; but they wanted a reality, and the question was whether the Bill, as framed by the majority of the Select Committee, gave a reality. With one voice the rate-payers had declared that it was not a reality; that it could not be a reality so long as the main-spring would be in the hands of Government, and that it could not therefore be looked upon as a boon or a blessing.'

"This, Sir, by one of the first, if not the first, native gentleman to agitate for Local Self-Government, and he recognises (1) the impossibility of conceding the principle; and (2) the fact that it had not been conceded. His Honour the President's answer to the latter quotation was as follows:—

'It is perfectly true, as has been stated by three Hon'ble Members, that I never promised to give the Calcutta community an elective system without Government control, and on 27th November last, I promised an elective system on condition of a certain limited Government control.'

"The most, Sir, that the then Lieutenant-Governor ever suggested conceding, was a restricted principle of election, but no Bill since framed has suggested depriving them of that. Therefore, I submit, Sir, to say that, twenty-three years ago the privileges of Local Self-Government were first accorded to the Capital of the Indian Empire is an error which it is impossible to conceive the Government of India have fallen into. Then, Sir, as to the meetings held in each of the 'Wards.' What are these Wards, and what their importance as representing public opinion? Are they important political divisions, such for example as Westminster; or are they, as I suppose, simply thanas or divisions for police administration purposes and such like? It is a fallacy to suppose that the body of rate-payers take any real interest in the present system, or that the present Commissioners truly represent them. This point was brought out by Mr. Risley in his able speech in this Council Chamber on the 19th March, 1898, when he showed that on the statistics of the ward elections of 1895 the registered electors amount to only two per cent. of the total population of Calcutta, and the figures of the 1898 election show an exactly similar result. Does such a result show that the privilege is as much cherished as the agitators would have it believed to be? The so-called 'boon' in reality has been mainly prized by those who sit as Commissioners and by their followers—not by the mass of the people who know or care little or nothing about it. I find the following to be an analysis of opinions 'For' and 'Against' the Bill:—

'*For* (1) Central National Muhammadan Association; (2) Bengal Chamber of Commerce and its allied associations; (3) European and Anglo-Indian Defence Association; (4) Calcutta Trades Association; (5) Imperial Anglo-Indian Association.

'*Against* (1) Bengal National Chamber of Commerce; (2) Indian Association; (3) nine so-called "public meetings," held between 31st August, 1898, and 15th March, 1899; (4) four "ward" meetings held between same dates.'

"What Calcutta requires, Sir, is representation of *interests*, not races. Commerce made Calcutta. By commerce, I mean European commerce, and by that Calcutta has existed, and will continue to exist. The history of Calcutta shows it to have been little more than a mud bank until European merchants settled there. The present Bengali population who clamour for the Government of Calcutta are not for the most part natives of the place, but have been attracted to it. As long, therefore, as Calcutta holds a prominent position in relation to the commerce of the world, so long have the representatives of Commerce a right to demand that they shall have

a preponderating voice in the Municipal Government. This principle is met by the present proposal of the Government of India, and in this view it has the support of the important interests which I have the honour to represent on this Council.

"The interests of Government and of Foreign Commerce are more important than all other interests put together, and ought consequently to be at least equally represented. It has been a matter of common complaint that Europeans have not hitherto attended and shared in the municipal administration of the city. The reply to this has been—and I would now beg to reiterate it—that while European merchants can and will find time to attend business functions, they will not give their time to functions where talk is the order of the day, and in which in the matter of arriving at any practical conclusion, they are in a hopeless minority. Under the provisions of the new Bill, I honestly believe they will attend and do good work. As an indication of this, I may be permitted to say that at the last general meeting of the Chamber, held in February last, special reference was made by the President and other prominent Members, to the Bill now before the Council, and of the necessity there would be, and the opportunity which would occur, for members of the mercantile community interesting themselves in the election of representatives of the Chamber on the Municipality under the new Act. It was then suggested, and the suggestion has been adopted, that under the new Act the Vice-President of the Chamber should generally be nominated to the General Committee. The Chamber of Commerce, in common with the other European bodies, are looking to the Bill being passed this session, and I trust, Sir, that you may see fit to direct the Council to see that in this they are not disappointed, and that the amendment favouring further postponement may be negatived."

The Hon'ble MR. APCAR said:—"I take this opportunity to thank you Sir, for having acceded to my request in part, and adjourned the Council on Saturday last. The time gained has been a help to me; at the same time I feel it to be due to myself to say that it has been insufficient to do justice to myself. The intervening day being Sunday, I have not been able to utilise it to obtain the papers I have wanted from the Municipal Office. I have been wholly occupied, since the adjournment on Saturday, up to the time when I left for the Council Chamber, collecting material for my speech, and putting together papers to which I wish to refer to-day. I have been hurried to a degree, and I feel conscious that I shall take up more time to-day than if I had been allowed more time for consideration. I wish very distinctly to say that I am not prepared to make my speech.

"Before I enter into any discussion, however, it will be unbecoming on my part not to pay a tribute to the hard work done in this Council by my predecessor, particularly in regard to the present Bill before us. I now turn to speak on the Motion moved by my hon'ble friend, which reads as follows:—

'That this Bill be referred back to the Select Committee for further consideration, with reference to the correspondence between the Government of India and the Government of Bengal.'

"The pronouncement by the Supreme Government of their views on the subject of this measure has been waited for with anxiety, for those who are opposed to its principles were not without hope that, coming to the consideration of the question with an open mind, and being intimately acquainted with the conditions of popular and representative institutions, His Excellency would not entirely favour the strange and startling changes that are proposed to be made in the constitution of the Corporation of Calcutta. Now that the letter of the Government of India has been published, it forms a notable and eloquent addition to the literature on the subject. I heartily support the desire expressed in it that there might be an end to the dissensions that have been created by the Municipal Bill. The fair promise that seemed to underlie portions of that letter has not been realised in the suggestions conveyed by it, in such courteous terms, to the Local Government, and while I am thankful for small mercies, I must plainly say that dissatisfaction with regard to the measure is in no degree allayed by the fresh proposals that now are made. The main feature of the new recommendations is the reduction of the elected

members from 50 to 25, the nominated members being maintained at 25, and the reduction being obtained by having only one member for each ward instead of, as now, two members. I have more than one objection to this proposal. I shall first mention the one which brings into prominence the flaw that, as it seems to me, runs through the Bill in so serious a degree—the omission by the framers of the Bill to consult those with intimate practical experience of the administration. It surely cannot be intended that no Muhammadan shall be elected? Yet the reduction of the members, as proposed, will tend to bring about that result. The Muhammadans will practically be disenfranchised. They will, it is true, continue to have the power to vote, but it will be a vain and useless labour to exercise that power in favour of their co-religionists. All the Muhammadan Commissioners elected at the last election came in second on the poll, with a single exception, who himself has told me that his position on the voting was largely due to Hindu support, for their votes were shared by him with his Hindu colleagues, and he has further expressly asked me to represent in the Council that, if there is to be only one member, the election will assuredly be fought out on class lines; that it is inevitable that in his ward all the Hindu votes will be cast for a Hindu, it will be a Hindu who will be elected over a candidate belonging to any other community, and that the same result will be experienced in every ward now returning a Muhammadan representative. I think that to exclude Muhammadans from election would cause a real hardship to that community, as I shall later endeavour more fully to explain.

"The reason given for reducing the number of elected Commissioners is to make it more in proportion with the number of the voters. In examining the number of representatives with reference to the number of voters, the Municipality cannot be compared with a political body. I urgently ask consideration for what I have to say. In a political assembly you have large issues discussed, which affect not individuals merely, but groups of persons. If for political purposes, votes be given to persons who are capable, or are supposed to be capable of understanding the burning question of the hour, the views held by such persons may comprise the views of all who need be considered, and their votes may give a proper and sufficient representation of a locality. Not so the 50 elected Commissioners. They do not represent their wards in the Parliamentary sense. Not the least important one of a Ward Commissioner's duties is the inspection of his ward. And both Ward Commissioners serve a useful purpose in this respect. But this is by no means all. He is not elected only to represent the views which may be entertained by the voters in his constituency or any group of them. With regard to large issues, your predecessor in office, Sir, as well as his spokesman in this Council, eulogised the Municipality for the manner in which they treat large issues. Sir Alexander Mackenzie, even in his Entally speech, expressly admitted this. He said:—

'The Municipality has, I am afraid, many shortcomings to answer for. But I must say this, that I have never been one to agree that it has shown niggardliness, or been backward in sanctioning money for either water-supply or drainage.'

"Again, Mr. Risley, in his reply, in the debate in Council, said—

'No one denies that much has been done, and a great deal of money spent. I have every wish to do ample justice, and I admit that it is in their dealings with large issues that we see the Commissioners at their best.'

"So that there can be no reason to cut down the number of elected Commissioners because of any party feeling about what is the more important business of their administration. The Administration touches the every-day life of each of the inhabitants, and particularly so in the crowded and poorer parts of the town, which lie in the northern quarter and in the suburbs. A Ward Commissioner represents the whole of the inhabitants of his Ward in a special sense, for his duties may lie with any individual among them, and so his representative character may be said to be, in effect, based on universal suffrage, and not only with regard to the voters in his constituency. Those who have votes may have common cause of complaint with those who have no votes. But the sufferings of the poor are widely different often to the experiences of their well-to-do neighbours. While, those who are in good

circumstances can make their voices heard independently of the Ward Commissioners, the poorer classes cannot do so. And the Muhammadans are among the poorest of the inhabitants of Calcutta. I do not exaggerate the melancholy truth when I say that the record of the Municipal Executive is detestable. It is the poorer inhabitants who are harassed by them most; it is the poorer inhabitants who need help most. The system of Municipal Administration that the Government have in their wisdom given them, has taught them to go to their Ward Commissioners for assistance. And, further, there can be not a shadow of a doubt that the knowledge that each Ward Commissioner has a voice in the administration of the Municipality is an effective form of protection from the subordinate staff. Permit me to quote Sir Henry Harrison in my support on the question of the usefulness of the elected Commissioners. In enumerating the gain to Municipal Administration on the elective system, he said:—

'Fourthly, the elective system has been successful in this, that people know that they have a Commissioner who represents them, and when they have a complaint, if it is not immediately attended to by the Executive, they appeal to get the assistance of their Commissioner. This has some beneficial results; it causes some degree of self-reliance in the people when they know that they have someone to whom they can go if they do not get immediate redress.'

"Sir Henry Harrison was stating facts that were the outcome of his experience so far back as 1888. Ten years have passed, events have developed, and the poor people have learned to rely more and more on the assistance of their Ward Commissioners, and they will feel the withdrawal of the practical support of the Ward Commissioner the more now, and it will cause discontent which need not be raised. In dealing with this particular matter I have touched upon a wider aspect than that affecting the Muhammadans. You, Sir, cannot have failed to observe, I am sure, that my comments have a bearing upon the position of native elected Commissioners generally, and not only about elected Muhammadan Commissioners, and also upon the larger issue of the new constitution that is proposed, which completely deprives the general body of Commissioners from an effective and direct voice in the administration of the Municipality.

"My hon'ble friend, Babu Surendranath Banerjee, has relieved me of the task of quoting the speech of Mr. Colman Macaulay who was Chief Secretary to the Local Government and a Member of the Council when the Act of 1888 was passed. It will be seen how he regarded the reduction of the numbers to 60 as being a contraction of the principles both of election and of representation. Here it is proposed to contract the principle of election only, and to a greater degree than was proposed in the amendment which he opposed. It will also be observed how emphatically he spoke of the success of the elective system.

"The Select Committee who reported on the Act of 1888 advised on the question of the nominated Commissioners, that out of the 25 nominated Commissioners the Chamber of Commerce and other bodies should be given the right to nominate 10 members. The Lieutenant-Governor of the day, Sir Steuart Bayley, one of the most experienced of Your Honour's predecessors, with great knowledge of the Province and of the European non-official world of Calcutta, in replying to an amendment of the Muhammadan Member of the Council that the Government should retain the nomination of the whole 25 members in their own hands, said:—

'To come back to this particular point my own position is this. The proposal of the Select Committee will have the effect of whittling away to a certain extent the power of the Local Government in regard to making nominations, and for that reason I shall vote for it. I think that as time goes on, it will probably be found more and more possible to keep down the proportion of nominations left in the hands of the Government; but at the same time I am not insensible of the objections which have been brought forward to the proposals of the Select Committee as to their particular distribution. There is something in what was said that there is no guarantee that these bodies, whatever they may represent to-day, will represent the same interests hereafter. And if you once stereotype the particular distribution, you will have to go through a long and disagreeable process to alter it. At the same time the Select Committee have given the subject serious thought; and I am not sure that any better proposal can be made. It would be unseemly for me at least to vote

or bringing the whole of the nominations back to the hands of the Government, but I have not the slightest wish to influence any Hon'ble Member from voting as he wishes.'

"It will be observed that Sir Steuart Bayley was not so much impressed with the idea of the overwhelmning necessity for special representation of commercial interests as something apart from the ordinary and general interest of rate-payers, and I shall show that he had a better appreciation of the situation than has later prevailed. His speech is also notable for the tone of appreciation towards the Corporation, and the progressive development that he foreshadowed in holding out the prospect of the Government withdrawing more and more from reserving the powers of nomination.

"I would point out also the result of the adoption of the proposal to cut down election—that is to say, to have only one elected Commissioner for each ward—will be that the number of places available for nomination for other communities will be diminished, because to redress the inequality that will be caused by the exclusion of Muhammadans by election, a larger number of them will have to be nominated. If they are to have a sufficient proportion of members on the Corporation, if even the whole number be not allotted to Muhammadans, the opportunity of nominating other interests will be most seriously curtailed; for instance, amongst others, the class of Hindus whom Mr. Risley so much favours—I mean those who will not submit themselves for election; those who would more directly represent Government interest, such as the Commissioner of Police and others; those who could be regarded as sanitary authorities, such as Dr. Sanders, Dr. Charles, Dr. Banks and others; the member for the carters, cow-keepers, washermen and busteewallas, whom Sir Alexander Mackenzie so much fancied as a very useful addition to the Corporation; and that very important class, the European rate-payers—will all run the risk of being left insufficiently represented. Practically it will come to this—and it is important, since the Government themselves lay such emphasis on the difference between the representation of the trade interest and that of the rate-payers—European interest will be confined to the representatives of the Chamber of Commerce, and I have known this body on one occasion to return one European, who was a journalist, and three Hindus, the Trades Association, the presence of whose members I always welcome, and the Port Commissioners. The interests of the trading communities are identical with, and are inseparably involved in those of the European rate-payers. But it can be easily seen, as I shall explain later, that the interests of the mercantile firms are not necessarily identical with those of the rate-payers. From my own observation I feel bound to say that I cannot regard representation by nomination for Muhammadans as satisfactory as representation by election, where it can be obtained. It will be enough if I say that my reason is that there can be no doubt that those who are elected are in closer touch with their constituencies, and represent them far better than those who may be nominated. I am sure that my hon'ble colleagues who are Muhammadans will agree with me that the selection by themselves of the men whom they wish to represent them, and the responsibility imposed on the elected Commissioners towards those to whom their election has been due, creates an effect, both on those who vote and on the candidates, that is nothing but for good.

"The point that I make in these comments is this: The Government of India have said in their letter that the first ground for the new Bill is the failure to secure, under the present conditions, adequate representation by the elective system, and this, as is apparent, with special reference to the Muhamadans, for they have added 'even in the native city.' The result of the new proposal—an unexpected result I feel sure—will be to annihilate the chances of Muhammadans for election. We are as much liable to do harm by want of thought as by want of heart. On the other hand, we find that the Government of India have condemned in a manner so clear that we cannot lose the impression of it, that the proportion of 12 on the General Committee is illogical with reference to 75 on the general body. If it is not intended to destroy the elective system, and I take it that it is not, the numbers of the elected Commissioners should not be reduced as is proposed. And to be logical and consistent, the numbers on the General Committee must be increased. The Europeans now number 8 elected Commissioners. This number, I think, under the

new proposals, will be reduced to 3. They may, however, hold 4 seats. Although the Europeans now number only 8 among the ward or elected Commissioners, my view is that with any organization their number could be raised to 12 or 14. I will speak from my own experience. In the year 1885 the Health Society was started for the sanitary reform of Calcutta. It was started by Europeans, under the auspices of Sir Henry Cunningham, but it comprised some native gentlemen also. One of their plans was to secure the return of Europeans as elected Commissioners. Amongst others, all of whom were successful in their elections, I was solicited to stand for election, and it was in this way that I came to join the Municipality. Before then, I had neither any idea nor inclination of doing so. The Health Society is dead, and I fear all such organizations will meet with the same fate in busy Calcutta.

"If it is not to crush the elective system, and I do not for a moment believe it is, what is the purpose to be served by reducing the number? I can think of only two that may be intended. I take the first to be to prevent waste of time by speeches. This has been dealt with by my hon'ble friend (Babu Surendranath Banerjee), and he again has relieved me greatly, and I need only very briefly refer to that point. It would be as absurd to suppose all the 75 members of the Corporation speak at the meetings held throughout the year as that the 600 and odd members of the House of Commons all speak in a single debate. On an average about 5 speak in one debate. The discussion is confined from years end to years end to only a few of the Commissioners: I think to not more than 14 or 16 in number. Any one outside this group very rarely speaks. I think one could very nearly guess before going to a meeting, the names of those who will speak. The Europeans take a fair share in the discussion. I should guess generally that my hon'ble friend here, Mr. Oldham, would be one of the speakers. He speaks to express his opinion. He would not speak, I am sure, if he thought he was only wasting time by so doing. And if he speaks, I am sure he is fair-minded enough to concede to others the right to express their opinions. It is not the number of persons in an assembly that occupies time. It depends on the individuals who may speak, and I again only am supporting Sir Henry Harrison's view when I say that a reduction even to 40 Commissioners would not make any appreciable difference in the time occupied at the meetings.

"The only other purpose I can think of that the reduction in the number of the Corporation is intended to serve, is to undermine the Hindu predominance in the Corporation. That the Hindus are in a majority numerically, of course, cannot be denied. I am, however, going to advance a contention that will astonish the Council, since it is diametrically opposed to all that has been so confidently relied upon on the point. I say there is no Hindu predominance in the sense that the term is always used. I say that the other communities are not kept in a hopeless minority at the meetings, because the Hindus do not, as a matter of fact, use their numbers to outvote them. If the Council will test the question of predominance with me I hope it will be made clear. The whole of the business of the administration is, in the first instance, dealt with in Committee and chiefly in the General Committee. We have it from Sir Henry Harrison that in his time only 5 per cent. of the items were challenged.

"I think that it will be an advantage to give Sir Henry Harrison's description of the system of work in his own words. This is what he said in this Council, when the Act of 1888 was passed:—

'He believed the system of work which had gradually developed itself in the Municipality was eminently advantageous and reasonable. Of course the greatest part of the work must be done by the Executive officers, but that portion which the members of the Corporation were able to look into was chiefly done by Committees. Committees had no final power of their own, and were entirely subordinate to the Commissioners-in-meeting. The result was that the whole work of the Corporation was done by these Committees; but any single member of the Corporation, and the Chairman especially, who often availed himself of the power, could virtually appeal from the decision of a Committee, if he chose, to the great body of the Commissioners. Therefore, the Corporation, as a whole, had practically fallen into the position of a Court of Appeal on every great question of interest. In 19 out of 20 cases the decisions of Committees on minor questions were passed without discussion on the assumption that the work was done well; it was only the twentieth case that was fought out over again.'

"My experience tells me that we have decidedly a smaller percentage now In the General Committee, which is by far the most important Committee of all, the Hindus are in an overwhelmning majority. The Hon'ble Mr. Oldham, the representative of the Chamber, and of the Trades Association—one from each,—my hon'ble friend Prince Bakhtyar Shah, with myself, are the only non-Hindus out of the 18 members. In actual attendance the Hindus have a still greater advantage. If the Hindus voted all on one side, there would be no waste of time, at least on their part—they would come prepared to support each other and would vote together, and there would be the most happy despatch of all the items of business. But we know that this is not what happens. There are the warmest discussions, and many items are hotly contested, with the Hindus on either side. My hon'ble friend Mr. Oldham, who is one of the most hard-working and regular attendants of the meetings, has again and again carried his motions with the support of Hindus. Take an instance that occurred only the other day. My hon'ble friend to my right (Babu Surendranath Banerjee), raised a question of Hindu feeling to give strength to his opposition to a resolution moved by myself. But I carried my motion with the support of Hindu votes. Again, in nothing more, to judge from Mr. Risely's strong strictures, would Hindu class feeling be more observable than in the appointment of the higher officers of the Corporation, all of them most desirable appointments. Nevertheless, since the establishment of the Corporation, no Hindu has yet been appointed to be the Municipal Engineer—a Hindu has never yet been appointed, in this country of officiating appointments, even to act for the Engineer—or to be the Secretary, or the Health Officer. And it is not as if the matter had not been tested. There have been strong efforts made to secure the election of Hindus for each of the appointments I have referred to, but in not a single instance has it been successful. I have long thought, and I am glad of the present opportunity of publicly declaring after a long experience of the Municipality, that the idea about Hindu predominance is a myth. I was speaking on this very subject to an hon'ble friend, and his observation is so apt that I will, with his permission, use his expression. He replied to my question, with quick Irish wit, that he had observed a predominance of Hindu intelligence, but he had not observed their predominance in any other way. I adopt this observation. Perhaps the predominance of the nature my hon'ble friend mentioned explains the situation.

"I think that the control of the Municipal Administration by the general body of members serves a very useful purpose. It keeps the whole body of them in touch with the work that is being done, and gives many most valuable assistants by reason of the active help, as I in practice have personally found, that the system enables every Commissioner, so minded, to give to the more influential in the Corporation. And what is a very important consideration to those familiar with the working of the administration, it gives recruits to fill the places of any that fall out of the ranks of the General Committee and ready to take up their work.

"I unhesitatingly say—to use one of Sir Alexander Mackenzie's expressions—it is abject nonsense to assert that the system is abused. Mr. Risley would have you to believe that 'the young Bengal, or new India, or whatever you may call them,' as he phrases it, holds sway and that the older and wiser heads are ruled by them. It is not so. The contrary is the fact. It is the very Commissioners who have received unstinted praise from Sir Alexander Mackenzie, from Mr. Risley, and from our present Rulers, who by their experience and standing are the real leaders in the Corporation, and have held their positions for ten and twenty years to my own personal knowledge. The younger men, to my regret sometimes, and to their chagrin, are thrust aside and are barely listened to, unless they have something of real importance to say. Let me again draw attention to Sir Henry Harrison's very striking picture of the leaders of the Corporation. If it was true in 1889, that which he found most conspicuous ten years ago has matured and has proportionately become more valuable now. He said:—

'There were some persons excellently intentioned who have fretted and fumed because the wheels of the chariot of progress have at times tarried, but was not any progress at all in such a trial an almost unparalleled success? Was it not still more gratifying to reflect

that this experimental system had in sober truth developed in many of the most experienced Commissioners that moderation in judgment, that sense of responsibility in action and discussion, that toleration of opposition, that practical sagacity which is at once the test of the experienced administrator and the best guarantee for the confidence bestowed in him? Was it not a legitimate triumph that, now that the necessity of making more sustained efforts for the improvement of the Suburbs of Calcutta was at last fully realised, no better course suggested itself than to make them over to the same body who had reclaimed the town of Calcutta'?

"I will not speak a word of comment to mar the eloquence and the impressive picture of the words that I have quoted. But I will warn the Government that the inevitable consequence of the course which they are pursuing will be to throw away the result of what has been proved to be a wise and statesman-like policy, for those whom they most value in the administration will assuredly not remain. It is not unfitting that I should apply to the policy now being adopted, in contrast to the moving eloquence of Sir Henry Harrison, my warning in the words of the very homely adage. 'It is well to make sure before emptying the bath, that the child is not being thrown out with the suds.'

"I fear that you, Sir, may think me exceedingly unfriendly, owing to the lurid pictures that have been painted of the meetings of the Commissioners, if I were to express a very strong regret, since one learns so much more by seeing than by hearing, that you have never taken part in any of the proceedings of the Municipality. And yet, in legislating on this most important Bill, I venture to say that I have the advantage over you, Sir, in being on my part intimately and practically acquainted with my subject. If you, Sir, have not been a Member of the Corporation, you have trusty councillors in this Chamber, in the person of my hon'ble friends Mr. Baker and Mr. Oldham, who have had sufficient experience to enable me to refer to them. I can give scores of instances of the practical use of the system that requires confirmation of the proceedings in Committees by the General Meeting. I shall refer, however, to only two, and I choose them because of the presence here of my hon'ble friends, the Member in charge of the Bill, and Mr. Oldham. The Hon'ble Mr. Baker will remember the tramway question, how at the instance of the Chairman of the time, an exceedingly improvident arrangement had been sanctioned by the General Committee, and how my hon'ble friend was one of the strongest supporters of the Commissioner who moved that the resolution of the General Committee should not be confirmed. The Chairman had not a word to say in support of his own motion when the position was explained, and the amendment was carried with his acquiescence. There can be no gainsaying the fact that, by the action of the General Meeting, the Corporation and the rate-payers escaped a most improvident arrangement, which included in its terms the taking over by the Corporation after 21 years user, the property of the Tramway Company at the rate of 140 per cent. of the capital stated to be invested, irrespective of depreciation of the property and without any enquiry as to what sum in truth constituted the invested capital. And further, Sir, as was later confirmed by the highest legal opinion, the proposals could not have been supported in law. And all the while the Chamber of Commerce and the Trades Association were intervening to support the proposals on behalf of a new Company that was going to work the Tramway Company's business. Turning to the Hon'ble Mr. Oldham, I would ask him, on his part, to recall how a resolution which had been carried on his own motion in General Committee relating to Contract No. II of the Suburban Drainage Scheme. There were questions involved which the Acting Engineer, in the absence, on leave, of the Engineer, had referred to in a Note as being of the highest importance, on which the directions of the General Committee should be obtained. These questions had arisen owing to the unbusinesslike proceedings of the Engineer's Department. When the matter came up before the General Committee, the Acting Engineer had given up charge and was not in office, and it is not surprising to me that the Note should not have been placed before the General Committee. In General Meeting, the same Commissioner who had obtained a reference back on the tramway question, pointed out that material considerations had not been before the General Committee. The Chairman who had been absent on leave when the question

was before the General Committee, at once agreed with him and said that the matter must go back. My hon'ble friend need not have said anything, because there was no opposition to the motion for a reference back, but he felt it to be incumbent upon himself to explain that he had moved his resolution in Committee under a complete misapprehension. I hear on all sides that 'You must admit'—that 'You cannot deny'—and other such expressions that there is great waste of time in these meetings, because of the constant references back of questions to Committees. I deny that there are constant references back: and I ask that when 96 and 97 per cent. of the work of Committee is passed without even discussion, is it right to condemn, without knowledge, from preconceived notions, and without stopping to enquire whether there is not reason for references back in say 1 or 2 per cent. of the matters that come before the General Meetings?

"We hear much in condemnation of the proceedings of the Commissioners by persons who have never attended a meeting of the Corporation and possibly know nothing of the business of public bodies in this or in any other country. Let me invoke the testimony of a most highly competent critic, well versed in public affairs, whose experiences place him immeasurably above those who have been so ready to belittle the Corporation. At one of our meetings in 1888, I remember we were honoured with a visit from no less a personage than the Viceroy. You, Sir, will see that, after all, I was not so very unfriendly in having wished that you had taken a personal part in the proceedings of the Municipality. Lord Dufferin had been some time in India, and knew many of those who took part in the proceedings on that day. There was a discussion on the budget—a more dry subject it would be hard to find to sit down and listen to. I remember that before His Excellency left the meeting he wrote a note—I saw the writing and I am very sorry that it has not been preserved in the archives of the Corporation—to be read to the Corporation. I am glad to say that his words have been preserved to us, for the Chairman, before the close of that day's meeting, read the note out to the meeting and it forms a part of the records of our Corporation. I will read from the proceedings of the day—28th of March, 1888:—

'The Chairman said that, before passing on to the fixing of the rates and taxes for the ensuing year, which was the next item of business, he wished to inform the Commissioners that His Excellency the Viceroy had noted the great pleasure he had derived from having had an opportunity to be present at their proceedings. To see so many persons of position and intelligence, representing as they do both the European and the Native element, devoting their time and talents to the improvement of the town of Calcutta, was very satisfactory.'

"Lord Dufferin gives a refutation to those detractors of the Municipality who speak of its members as being men of no position, who represent none but themselves, mere lawyers and corrupt politicians, and I would draw attention to the ring of the words that follow, because they seem to convey the strong impression that had been created in Lord Dufferin's mind:—

'He must also add that he had been much struck by the orderly, practical, and dignified manner in which the business of the meeting had been conducted; his best sympathies and good wishes would always accompany the labours of the Municipal Council and the welfare of those whose affairs they administered.'

"The object of the changes in the law are, it is said, to induce the European Mercantile community to join the Corporation. I have the fullest sympathy with the desire to obtain them as working members. They have the opportunity now, but they do not use it. If they speak of waste of time in the General Meetings, let them learn that the work of the administration is done in Committees, where speeches are not made, and where they can hold their own, if they only will give the time that is required, and always will be required, whether the present constitution is destroyed or not. My hon'ble friends Mr. Baker and Mr. Oldham have been able to join the General Committee and attend regularly: the representatives of the mercantile and trading community could do the same, if only they would be willing to give the time that unavoidably must be required for the transaction of business. This again is by no means a new question. Sir Stuart Hogg expressed his opinion during the legislation of 1876 that they could never be got to give their time to the work: that they were birds-of-passage and not permanent residents

of the city, and as very busy men, they could not be expected to serve as active members of the Corporation. Sir Henry Harrison, another Chairman, speaking after an experience almost as long as that of Sir Stuart Hogg, bore testimony to the same effect. There is no class of persons whom I would welcome more cordially in the Corporation, and to secure whose services I would be more willing to make sacrifices, if only I could think that they would be found to be useful and active members. But I am convinced that it is hopeless to expect it. It is a most important consideration that the working members should give continuous service for a series of years. We have Hindu Commissioners, whose homes are here, who have continuously for 20 or 25 years been active Commissioners. I know no one amongst the leaders of the Corporation who has been for less than 10 years working regularly, and I may say unsparingly. They give the utmost assistance to the Chairman, the incumbent of which office is being constantly changed. With Europeans, the exigencies of their businesses, the climate, absence from their home country, all will operate to cause very short spells of membership. Individuals will think that if they have served one or two years, they have done their turn, and others should undergo the martyrdom that they have had to suffer. The result will be that before they have served their apprenticeship to become serviceable members, they will have left and the same process will be repeated with each successive member. Mr. Risley falls foul of Sir Stuart Hogg for having suggested that the European community are birds-of-passage, and expresses amazement at the idea because, forsooth, Europeans are interested in their firms, and their firms continue to carry on business here. That is to say, a business man working here to-day, will enter the Corporation because, after he has retired, his firm may or may not be carrying on business here, and he may or may not continue to have an interest in it. We must recognise that the work of the Corporation requires leisure, and the high pressure at which businesses must now be conducted, does not admit of leisure being provided for those engaged in them, for service on the Municipality. Again, the whole idea of a continuing interest is purely speculative, and the force of the reason asserted has no force with me. In the first place the business firms, it is not even suggested, have suffered from any maladministration of the Municipality, and, in the second place, they contribute to the administration only an insignificant amount in their expenses, in the shape of a license tax which is fixed and invariable. They have successfully resisted all attempts to levy *octroi* duty. Only the other day, when the Building Commission confirmed all that the Corporation have long been saying without being credited, that the whole of their revenue is required for their ordinary administration, that the opening out of the congested parts of the city is of the first importance for its sanitary improvement, and invited the Chamber of Commerce, amongst other bodies, to suggest sources from which money could be obtained for the purpose. The Chamber of Commerce declined to make a single suggestion, for the obvious reason that whatever they might suggest one or other of the businesses carried on by their members would be touched. The members of the various firms are concerned only for their personal comfort and convenience while they reside here, and, circumstanced as they are, they undeniably are only birds-of-passage.

"Then Mr. Risley tells us that because they serve on the Port Trust, they will with equal readiness, if only the constitution is changed, serve on the Corporation. I would point out that the two institutions cannot be placed in the same field for the purposes of comparison. The Port Trust deals with the trade of the port. The members of the Board transacting the business of the Trust, are men connected with the trade of the port—imports, exports, shipping, traders, railways, manufacturers, together with whom, the representatives of the Government and the Municipality, give to the Board complete representation of all the interests concerned. The work is congenial to business men, and I suppose not one item out of 100 is not intelligible or interesting, and generally business in which one or the other of the firms to which the representatives belong, are in some way affected. Many of the members serve on the Board as part of the management of their own business concerns. Their interest, while on the Port Trust, centres round their own businesses, in which their capital is invested. The business done in the Port Trust meetings affects the business of the Port with which all are in touch.

The operations of the Port Trust influence the cost of the business of the Port, and they are concerned to watch their own interests. If economy is not practised, and close supervision, their own interests would suffer.

"It is true that fees are paid for attendance in the Port Trust. The members are business men, and if money is offered, they pocket it. But fees do not make the difference in their acceptance of office. The profits of their own businesses are involved in the operations of the Port Trust, and whether fees were paid or not, there would be competitors for office from among the same class who now send members. It is now proposed to give fees for attendance at Committee meetings in the municipality. Payment has never been made before. It was proposed in 1888, and the idea was very decisively rejected. I think that it is a needless expenditure, and ought not to be incurred as a new departure in the administration. If the payment will make a difference in inducing any person to join, I would regard him as not a desirable member in the Corporation, and I fear that the payment of fees will lead to mischievous results.

"There is the greatest difference in the work of the Municipality in contrast with that of the Port Trust. It is not of a congenial kind for the class who join the Port Trust, and not one item of business out of 50 will interest them. It deals in a large measure with conditions of life which is strange to them. The Municipality has to do with the every-day lives of the people of this country, but they are not in touch with them, and least of all with the poorer classes for whom the present elected Commissioners, who are natives of the country, have done so much. They cannot show sympathy with classes of whose wants, requirements, and habits, they are wholly ignorant. In the Port Trust they look after not only their own interests, but also of those of the mercantile public in general, with whom they are closely in touch. And most important distinction of all, there will not be the same incentive to economise in the administration. Since they will not feel extravagant expenditure in the Municipality personally or in their business firms, it will be immaterial to them whether the rates are raised to 25 per cent., and we know that the limit of endurance by the poor is 19½ per cent. In the Port Trust they would be careful because the operations of that body affect their own businesses. All this will inevitably lead to the Europeans becoming apathetic, and in order to save themselves trouble, gladly leaving the work, so much of which they do not understand, whether by their own inexperience in the administration, or their want of knowledge of the character of the questions that may be under discussion, to be taken up by those whose interest may be to make themselves busy and useful. I firmly believe that we shall not have the administration worked under the influence of the European element, for whom such great sacrifices are being made, but its threads will fall into the hands of a few, and perhaps of an interested few. The prospect of fees will make the impecunious eager to serve on the Committees, and particularly the General Committee, which will be, as now, the Finance Committee of the Corporation. And the very fact that they are impecunious will be a help to them, because the tender-hearted, for the sake of making a little provision for one or other of their importunate friends, will support their candidature and vote for their election. And it by no means is impossible that influential contractors will make efforts to obtain admission of friends into the General Committee who, if successful in gaining admission, will represent the interest of the contractors in the Committee. My contention is strengthened by the Government of India, because I cannot be taken as vaguely protesting that these things are possible. The Government of India puts forward as one of the grounds for legislation that there is corruption among the Commissioners. Now when the Government solemnly make a statement of this nature, and base legislation upon it, we must take it that they have good grounds for it."

The Hon'ble the PRESIDENT said:—"I am sorry to interrupt the Hon'ble Member, but that is a matter which I must exclude from discussion to-day."

The Hon'ble MR. APCAR said:—"I, of course, bow to the ruling, and I would only explain that the letter is mentioned in the motion before us and is

under reference to the Select Committee. I merely refer to what I rely upon in my argument."

The Hon'ble the PRESIDENT said:—"I cannot allow that statement in the letter to be referred to."

The Hon'ble MR. APCAR continued:—"I bow to the ruling. I will keep myself within the ruling, and I will not rely on the suggestion as one contained in the letter. I avow it independently of the letter. We must accept the possibility of such a condition of things. I do not say that it is possible only in Calcutta. The Manchester Police Scandal, and other scandals in various Town Councils and Municipalities in the United Kingdom show that we cannot expect Municipalities to be immaculate. And the smaller the body we have, the more real is the danger that we must provide against. And when we recall the defunct Metropolitan Board of Works of London, we cannot expect that all small bodies will be immaculate. One of the serious defects in a small body is that there may be corrupt persons in it, and if that defect exists now, it will exist later on. We have our defence now against any suspicion of wrong doing. The 75 Commissioners have been referred to as so many masters of the Executive. It shows an utter want of acquaintance with the subject for any suggestion of the kind to be made, for no Commissioner can give any order individually. But they may truthfully be regarded as the eyes and ears of the rate-payers. If there is a rumour of a suspicious transaction which may have escaped the vigilance of the Committee, the Commissioners in the General Meeting come down on it like the leucocytes in the Republic of the Body, and with their silent sensible sanitary vote, and cure it.

"The Bill, Sir, was explained to us, when it was introduced, as being on the model of the Bombay Act. If we are asked to accept the view that we have, in this Bill, the Bombay constitution transplanted to Calcutta, I shall not express my opinion with sufficient emphasis if I say of the constitution proposed for Calcutta, *Diablement changé en route!* The Bombay Act gives a virile, workable constitution. This Bill, if it becomes law, will give a maimed thing, that will be found unworkable and pregnant with hardship and mischief. However, Sir, the Government of India have set before themselves the laudable purpose of giving an administration that 'shall secure the adequate representation of the various great interests that have placed and still keep Calcutta in its present position in India and which shall be businesslike, efficient and free from scandal and reproach.' If I may say so, our requirements cannot be better described, and the inhabitants of this city are indebted to the Government for a true appreciation of their responsibility in the matter of our municipal administration. We must be clear in the first place as to the various great interests that should be represented, and in the next, we should recognise that adequate representation is not the presentation of so many places to make up a certain percentage with relation to the whole body of Commissioners. There cannot, I take it, be any difference of opinion that, unless we secure a sufficient number of really representative men, who will fill places in the commercial interests, those places will become so many wasted places, and in consequence the very object for which they have been assigned to them would be defeated. There can be no doubt that it will not answer any good purpose unless those returned are truly representative men, who will enter the Corporation to serve the public, and represent the interests which they have been sent there to represent, and for no other purpose. Commercial interests, which are so intimately bound up with my own that I almost depend upon them, have placed Calcutta in its present forward state, and the undeniable admission before us that Calcutta is not only in the front rank of places in India, but also keeps her place, shows that these interests have hitherto not been prejudiced by any maladministration of the town. Among the many allegations that have been thrown broadcast against the Corporation, I have found no specific one that it is suggested has, in fact, caused injury to the trading interests of this city. I shall meet the allegations against the Commissioners that underlie the words I have quoted from the Government letter, and I am glad of the oppor-

tunity of showing that they cannot stand the test of examination, far less can they then be taken to have been hurtful to the trade of the port.

"The Government of India lays stress on the necessity of the administration being businesslike. The urgent necessity of this quality no one has insisted upon with greater emphasis than I. It has been my constant cry as my Hon'ble friends Mr. Baker and Mr. Oldham will remember, that we were not businesslike, but it is through no fault of the Commissioners. I will give an example of what I refer to."

The Hon'ble Mr. BAKER said:—"I rise to order. There is no question at all in relation to the past administration of the present Corporation."

The Hon'ble the PRESIDENT said:—"The Council came to a conclusion on that point. The question whether the Corporation has or has not done its duty in the past is beyond the pale of the Council."

The Hon'ble Mr. APCAR said:—"I wish to point out that the Government of India have indicated that the administration is unbusinesslike, and I claimed to be entitled to show to what such charges are due."

The Hon'ble the PRESIDENT:—"Proceed."

The Hon'ble MR. APCAR continued:—"The Tramway Company had for more than five years complained of a nuisance, of the most offensive character, in a drain at their Kidderpore Depôt. No attention was paid to them. The matter became so serious that it attracted the attention of the Government, and in December of 1896, Mr. Risley, the Secretary of the Local Government in the Municipal Department, wrote to the Chairman of the Corporation to draw the attention of the Commissioners to it, and called upon them to abate the nuisance. Even a letter from the Government had not the effect desired. In December, 1897, the District Magistrate, on the report of his Sanitary authority, wrote to threaten proceedings in the Criminal Court. Then the Municipal Executive woke up. The Local Government authority in the person of the Commissioner of the Division, the Engineer, the Health Officer, and the Local Engineer of the Municipality met the Chairman at the spot. The Engineer to the Corporation proposed that the new pumping machinery required for the drainage scheme under construction should be telegraphed for and obtained from England without calling for tenders. The proposal of the subordinate in his department to utilise a portable engine then in the Municipal Stores, and make a short length of brick drain at a small cost, was preferred, and the Engineer was directed to submit estimates without delay. The Chairman again and again urgently called for the estimates that were ordered, and up to the time when he went away on leave, in March following, they had not been submitted. The new Chairman, shortly after entering upon office, at the close of a meeting of the General Committee, when only a few members, myself among the number, were left, without due notice, brought up the proposal that had been rejected, without a word of information that the permanent incumbent of his office had already given his decision in the matter, and without an inkling being given of the past history of the question, asked us to give the Engineer a free hand, to enable him to telegraph to England to purchase the pumping engine at the cost of Rs. 60,000. This would have involved a large portion of the drainage under construction being taken over prematurely, which, in the existing circumstances which I do not wish to enter into here, would have been a very undesirable proceeding. The Chairman continued to press for the sanction until formal objection was taken on the ground of want of notice, when he withdrew his proposal, undertaking to bring it up again, with due notice, in the following week. Although he had represented the matter to be of the most urgent character, and although I personally reminded him of it on more than one occasion, the subject was never again brought up. Now, this is a matter about which the aggrieved persons would naturally speak of as being a gross neglect on the part of the Commissioners. When the Secretary to the Local Government wrote officially to draw the attention of the Commissioners

to the nuisance, he naturally would be under the impression that the Commissioners had been made acquainted with his letter and had been neglectful. When the District Magistrate threatened prosecution, he would naturally think that it was the Commissioners who had been stirred into action by reason of his threat. The truth is that, from first to last, the Commissioners were kept wholly ignorant of the subject. I was led to enquire into the matter by quite a chance circumstance, and then the whole of the facts were elicited. It seems an incredible story, but I embodied the facts in a Note which was placed formally before the General Committee, when the Commissioners received intimation of the matter for the first time, and not a single statement of fact could be denied. In February last I went down to the spot and found it still a foul nuisance. Nothing had, up to that date, been done, although, more than a year before, the Chairman had issued specific orders in the matter. Is it surprising that the Complaints Committee was instituted when we have proceedings such as these occurring? Now it is bad enough that the Engineer should have neglected to carry out the Chairman's orders. It is bad enough that immediately the permanent incumbent goes away on leave his *locum tenens* should endeavour to entirely reverse his orders, it is bad enough that a Chairman endeavours to get a sanction for such large expenditure in so irregular a manner, it is bad enough that even the complaint of the Local Government should be unheeded and that the Commissioners should be kept in absolute ignorance of it. But worst of all is what we suffer so much from, that the Engineer should disregard the Chairman and dare to act as he did in this matter, and that he should be allowed to do so with impunity. We are blamed for interfering with the Executive: where is the interference here? We are blamed for hampering the Chairman with Committees and in other ways: in what have we been in fault in this question? You may regard this as a solitary instance, I can give you others. We know how the public attention has been drawn to the Town Hall, and how much blame has been thrown upon the Commissioners. What are the facts"?

The Hon'ble MR. BAKER said:—"The Hon'ble Member is making an attack on the Executive."

The Hon'ble MR. APCAR said:—"It has been ruled that I can do so. I have given one illustration, and I wish to show that it is by no means an isolated instance."

The Hon'ble the PRESIDENT said:—"We have had one illustration, and I think that is sufficient."

The Hon'ble MR. APCAR said:—"I wish it to be understood that I am prepared to give other instances. If it is accepted that the instance I have given is only one instance out of many, I have no desire to take the trouble of quoting others, or to occupy the time of the Council further. I am content to leave the point on that footing. With the rulings from the Chair in respect of the letter of the Government, I am embarassed as to how I should proceed. I have no wish to contravene any order, and if I may ask it, I would enquire whether I may refer to an expression of Sir Henry Harrison that the Commissioners were lacking in driving or motive power, which has been quoted by the Government of India as an opinion which is relied upon by the Local Government to show the necessity of an influx of Europeans."

The Hon'ble the PRESIDENT said:—"Proceed."

The Hon'ble MR. APCAR said:—"I am glad of the opportunities of referring to this point now. The quotation is an isolated extract from a speech which, if read in its entirety, would be found not to bear out the view in support of which it is quoted. But it will suffice if I answer by showing that, as a matter of fact, Sir Henry Harrison in the very speech that is quoted from, opposed the proposal of making the proportions of the bodies of Commissioners equal, by reducing the number of elected Commissioners, and increasing that of the nominated Commissioners, and the debate on the two amendments being taken together, he also

opposed the proposal to increase the number of elected Commissioners to three-fourths, and decrease that of the nominated to one-fourth. It is obvious, in such circumstances, that a carefully selected sentence might mislead. He supported in the same speech the proportion that then was existing, which was the view of the Government, and was carried, that is, to the proportion of two-thirds elected to one-third nominated which the Government now wish to change. If Sir Henry Harrison desired to have more nominated Commissioners, in other words the opportunity of having more Europeans in the Corporation, he would have supported the amendment for equal proportions which he declined to do. The whole mischief in the present proceedings is that they are being conducted by those who are ignorant of the past history of the questions that are raised. To me, it is very apparent that Sir Henry Harrison had the question of the road now named after him and called Harrison Road, in his mind. He had made the question his own and pressed it with great urgency. His opinion was that, owing to the betterment clauses, the whole cost of the project would be covered. Some of the leading Hindu Commissioners were of opinion that his estimate was an impossible one. The net cost in the result proved to be nearly 28 lakhs. Now, when a project is recommended by its promoter as one the cost of which would be *nil*, and the cost is found to amount to comparatively such an enormous sum, it must be admitted that the opposition was not without reason. An isolated phrase used in 1888 is raked up as a ground for a change to-day. Has there been any enquiry to show whether the idea, even if true in years past, is true now, and even if the meaning of the words is that which is now attempted to be put upon it? If any enquiry were instituted, it would be found that the Commissioners have by no means been lacking in initiative: it would be shewn whether we have seen any project from the Chairman since Sir Henry Harrison left us, and to take one instance only, how I have had to struggle for 6 years against the stolid opposition of a Chairman against me before sanction was gained for the construction of a road that eased the overcrowded traffic of Russa Road, gave a convenient approach to Kalighât and filled up 18 or 19 highly insanitary tanks, and I would also mention that with reference to roads which the Building Commission recommended to open out the congested quarters of the town, I carried a motion unanimously, asking the Government to commence action by taking steps to consider the alignments of the roads, the cost of them, and how the money for them should be obtained. A letter was written by the Corporation in May last year. Up to to-day not even an acknowledgment of the letter has been received from the Government.

"Sir, in my opinion, the controversy hinges on the question whether the general body shall hold in their hands, for exercise directly or indirectly, the authority to control the general administration of the Municipality, acting openly, and with full responsibility. This is the system of municipal government that prevails in civilized countries, and was extended to Calcutta 36 years ago. Three and twenty years ago the elective system was introduced, after an open enquiry at which Counsel were heard, and in view of the mixed communities in Calcutta, among whom it was thought that the Hindus must be in a permanent majority at the polls, a constitution on the principle of election and of representation by nomination was established in the proportions of two-thirds to one-third, and this constitution was re-enacted on the progressive lines, in the Act of 1888, which it is the object of the present Bill to repeal. The proceedings of 1876 and those of 1888 were severally in charge of Sir Stuart Hogg and Sir Henry Harrison, who had respectively been the Chairmen of the Corporation for nine and eight years. In the interval before 1888 there had been a suggestion to alter the constitution, but the Government set their face against any such idea. Sir Henry Cunningham, who in 1884 led the agitation on sanitary questions that resulted in the Beverly Commission, of which we have heard so much during these proceedings, who had founded the Health Society which I have before mentioned, and had also led the agitation which resulted in the amalgamation of the suburbs with the town area, ventilated the idea of a Municipal Board of Control on the lines of the Port Trust, but on re-consideration he abandoned it. The reception that he met with at the hands of Sir Rivers Thompson, who was Lieutenant-Governor at the time, was such that he even

publicly withdrew the suggestion and apologised for having made it. It will be useful, in these days when the Beverly Commission is so much put in evidence, to see how well the Corporation were supposed to have come out of the enquiry and the confidence placed in them at the time by the very person to whom so much was due for its appointment. I shall quote from a public address delivered by Sir Henry Cunningham on 5th March, 1885 in Calcutta. The first portion of the extract relates to the speech of Sir Henry Harrison, the Chairman of the Corporation, in submitting the report of the Beverly Commission to the Corporation:—

'Now I am sure that all of us must feel this to be a most satisfactory announcement. Of the 37 reforms suggested by the Commission, 4 can be effected by Government, and we need not fear as to them. Of the 18 specific suggestions, 11 are wholly and 4 partially carried out, and only about 3 is there likely to be a difference of opinion. Of the 15 recommendations of general policy, 10 are already adopted, and as to the 5, the Commissioners have not decided, but have intimated no reluctance to adopt them. As to this small residuum, we shall, I am sure, all of us join in the Chairman's hope that the Commissioners will view the subject as the authors of the report framed it—in a conciliatory spirit.'

"We have had this Commission quoted against us in an authoritative fashion, as if the speaker knew all about the subject, when he apparently could not have known anything of its history, and relied upon as showing results as they in the present day, condemnatory to the Corporation, when the one who actually was the complainant, at whose instance the Beverly Commission was appointed, characterises the statement, not of a Commissioner, but of the official Chairman of the Corporation, to use his own words 'a most satisfactory announcement.' As a matter of fact, as might have been expected, and as it has been with much detail been pointed out, the Corporation have carried out, and in some instances more than fully carried out, the recommendations of that Commission.

"To proceed with reference to the proposal of a Municipal Board of the character of the Port Trust:—

'There has been an idea, due in part, I am afraid, to some words of mine, that there was a wish to ignore the enormous benefits conferred on the city by the great measures of sanitary reform carried out of late years by the Corporation; and some people have chosen to attribute the whole of the recent movement in favour of sanitary reform to a latent wish to depreciate popular institutions and Local Self-Government in particular. There were some expressions of mine with which His Honour the Lieutenant-Governor, in one of his Resolutions, said that he could not sympathize. Now there I am glad to be at one with His Honour, because I do not sympathize with them either, and I heartily wish they were unsaid if they gave any one pain. I have never heard of any one so ignorant and so foolish as to undervalue what has already been done. As the original prospectus of the Health Society said, it has revolutionized the sanitary condition of many parts of the town. For my own part so strongly do I feel this that I do not at all expect that any further improvement in the city can be on so great a scale or have such wide-reaching effects as the improvements of the past. They have reduced the mortality of the town by nearly 100 per cent., from 22,000 to 12,000; and the programme of reform which I have described to-night contemplates only a further saving of 7,000 lives from town and suburbs together.'

"After this, the idea of a control by a small body, until it was resuscitated by this Bill, was treated as dead as is the idea of protection in England. It will thus be seen that, not only Sir Richard Temple and Sir Steuart Bayley, who were our Lieutenant-Governors when the Acts of 1876 and 1888 were passed, but also, in 1884, Sir Rivers Thompson had the subject of the constitution brought directly under their consideration, and not any of them would consent to change the present constitution, and Sir Rivers Thompson even sharply declined to entertain the idea. The whole way through, as I shall on a future occasion show, every single element in this controversy has a prototype: thus we have had an appalling document that has been spoken to in that famous speech, in the shape of a report by Dr. Payne in 1877, which Sir Ashley Eden put aside in a Resolution of a Statesman, and even that famous Entally speech is not new matter.

"Let me refer again to the Act of 1888. The European community had for some time before been leading an agitation for the amalgamation of the Suburbs with the town of Calcutta for municipal administration, and the Corporation, who were willing to allow their neighbours to participate in the

benefits of their water-supply, for the sake of administrative convenience, supported the idea. The Government through their Executive Officer of the district, who was the Chairman of the body constituting the Suburban Municipality, which worked with closed doors, were intimately associated with its administration. And the Act of 1888, which is a progressive development of the previous law, was passed, as I have already said, to amend the Act of 1876, and also for the purpose of amalgamating the suburban area with the town, that is to say, an area of about 13 square miles, with about a quarter of a million of inhabitants, was added under the Act to the town, comprising about six square miles, with a population of about 400,000. If the Government in truth entertained an unfavourable opinion of the administration of Calcutta; if they thought that the Calcutta Commissioners were not fit to be entrusted with the administration of the town; if they thought they were corrupt; if they thought that Hindu predominance and obstruction did indeed hold sway; if they thought that any other constitution was better calculated to give good results; then why in the name of common sense, and of wise and proper government, did they insist—for there was active opposition in the town for the reason, among others, that the Suburbs were in a backward state, would consume more than its fair share of our funds to be placed in a sanitary condition, and in the Suburbs because it was feared that their rates, amounting then to 7 per cent., would be increased—why I say did they insist upon amalgamation and upon the Calcutta Corporation taking over charge of an enormous inhabited area, with the prospect of 14 more Hindus being added to an already bloated contingent of Hindus, when they could have so easily worked their will upon the Suburbs, and have given them a model Municipality after their own heart, reserving the utmost power in the Executive, and with every appliance for repressing the time-wasting Babu? The fact of the matter was that the Government were anxious to be quit of all responsibility in being connected with the Municipal Administration of the Suburbs, for obloquy and odium are inseparably connected with every Municipal Administration, and they thought that whatever strictures—and I am not one to depreciate the wholesome effect of criticism, whether applied to Bumbledom or to higher authority—that may have been passed upon the Corporation, the Commissioners were showing increasing aptitude for local administration, and had proved themselves capable of undertaking greater responsibilities. If this is not true, then I invite the Government to give some explanation how they could have been so neglectful of the interests committed to them as to recklessly hand them over to the charge of a corrupt, incapable, and obstructive body? And as to the Europeans, if they really considered the Corporation to be incompetent and perverse, I would invite them also to give an explanation how they came to agitate—Mr. Irving, who represented the Trades Association in this Council, was one of the leaders of the agitation—for the amalgamation of an immense area in order that it may be administered by a Corporation to which they so much objected. I must not omit to mention that throughout all the discussions that have taken place, whenever objections have been made, they have been of the same stereotyped character, and there never has been a suggestion thrown out in this Council on behalf of the non-official European community that they desired the proceedings to be conducted in private and not in the full blaze of publicity. The native community have consistently and strongly pressed, to their credit be it said, for publicity as being the best safeguard that is available, not merely against arbitrariness, but also against malversation and jobbery.

"I have been studying the proceedings of the Bengal Council when the Legislature dealt with the law relating to the Corporation on previous occasions, and I have found every one of the various questions that form the proposals in the present Bill, and all the shortcomings of the Commissioners that have been brought up in connection with it, have been raised again and again. They were all discussed when the Act of 1876 was passed, and again when the Act of 1888 was passed. Thus we have had a proposal for an Act on the lines of the Bombay Municipal Acts, for a Municipal Board on the lines of our Port Trust; the objection to the excessive numbers in the

Corporation, and of its unwieldiness for practical work; a proposal to reduce the number not to 50—nothing so venturesome was ever attempted—but to 60; for the proportion of elected members to be reduced to one-half of the whole body; the obstructiveness of the Hindu Commissioners; their predominant voting powers; even the payment of fees, have all been discussed. After debates of the fullest and keenest character, after the most serious deliberation, all these contentions were decided—as it was hoped, finally decided. But there is this difference in the present position. Before, on the first occasion, it was the Government who met the objections that I have mentioned, and after the fullest consideration, they granted the present constitution to the Corporation. On the second opportunity, they refuted the self-same arguments, they freely accepted what had before been done as a settled policy, which they were able to support by powerful reasons of their own, drawn from the actual experience of the working of the administration, and they deliberately reaffirmed the constitution, but on progressive lines. In the present day, every argument that the Government on previous occasions refused to accept, is given as a reason for a change, every principle that was strenuously fought for by the Government themselves, is rejected, and we have to contemplate the Government of the day in Bengal bringing forward a Bill that embodies principles more revolutionary than was ever even suggested by the most uncompromising opponents of the Corporation, since the present constitution was granted to that body.

"I am no enthusiast in favour of the present administration; on the contrary I think it greatly needs reform. But I join issue on the Bill. And I think, too, if the Government had attended to the requests from the Corporation to legislate and give them powers they have not, the Corporation would have escaped some of the blame that has been sought to attach to that body.

"It does not follow that because a certain law has been enacted that it never shall be changed. But it does follow that when a constitution for the government of an important institution has been granted, and maintained through a series of years, as the settled policy of the Government, it should not be changed except for reasons of the most conclusive nature, and the Government for their own good name and for the happiness and contentment of a loyal people should be ready to show that the change is not wrought by the caprice of any ruler. It does follow that after the Government have been so ready to make use of a body of persons for many years, and after they have repeatedly acknowledged that that body have borne the drudgery of the administration and have rendered great benefits by their labour and service to the chief city of their Empire, after they have deliberately shifted the burden of a heavy charge on to their shoulder from their own, and in so doing marked their confidence in them, as was done on the amalgamation of the suburbs, I say it does follow that those who have done so much, should be treated with full and fair consideration. And I cannot say that this has been done. Those who have felt themselves so painfully aggrieved have again and again appealed in the most earnest—almost pathetic—manner that they may be given a chance of showing that the statements upon which this most important legislation, which so seriously affects their interests, is proceeding, can be displaced; that the statements are one-sided, and they should not be condemned unheard. But the Government of this great dependency of England have continued to treat their own statements in the way Don Quixote treated his helmet, as if they are too tender to be put to the test. The statements have been accepted because of the authoritative manner in which they have been brought forward. It is due to the public that opportunity be given of regarding them from more than one point of view. If there are inaccuracies, they should be corrected so that they should not mislead. And above all, it should not be left open to any one from his place in the Legislature, not lightly, but with a due sense of his responsibility, to say, as I do say face to face with the Government of the day, that those statements embody misconceptions of fact that have distorted and prejudiced the whole question *ab initio*. I hasten to say that I appreciate, Sir, that the Bill, in its policy and in the form in which it was introduced, cannot be attributed to any person who is in charge of the measures or is in any degree responsible for the policy of the Government, nor is there any one in the Government to-day who is

answerable for the statements on which the Bill was ostensibly based. Our present rulers have succeeded to a damaging heritage, and the sympathy of all, whether supporters or opponents of the Bill, is due to them in the very difficult position in which they find themselves placed.

"As has been repeatedly stated in Council on behalf of the Government in past years, we have not a *tabula rasa* to work upon, and the safest and best course is to proceed on settled lines, and if I show, as I am confident I shall be able to do, that the statements on which Mr. Risley has relied cannot be acted upon, I am not without hope that in the final result the present support to the principles of the Bill will not be maintained. I am aware that you, Sir, have expressed approval of the Bill. I venture to say, and I cannot be far wrong, that it is because the statements on which it has been based have been relied upon. I acknowledge the advantages—nay even the necessity—of a continuity of policy, but I cannot admit it is imperative at any cost or in all circumstances. Official tradition is a strong factor, but if homage is paid to it in the present matter, or independently of that idea, if the principle of the Bill is in the result accepted, violence will be done to a tradition yet more potent and with more far-reaching an effect. It is a tradition that has grown with the growth, been strengthened with the strength of England, it is the tradition that her own public institutions, and those that have come into being under her fostering care, have been reformed rather than revolutionised, that they have grown rather than remade. And a departure from this tradition would be the more remarkable in this Legislature, where we are ruled by a paternal Government, in whose hands power continues steadfastly, and where no system of party Government finds place. In considering the recommendations of your immediate predecessor, Sir, we cannot lose sight of the fact that they can only be adopted by rejecting the policy of your predecessors before him.

"I do not belong to the same political complexion or class as those who are the most excited about the measure, and are the chief opponents of it. I have no partisan feeling on the subject, and I do not concern myself with any sentimental views about Local Self-Government in connection with the question. But I speak with an experience far greater and more intimate than that of any person who has been officially connected with the Bill before the Council. I have a personal and permanent interest at stake, and I am anxious for that to be done which will be the best for the welfare and prosperity of this city. I cordially acknowledge that you, Sir, and the Government of India are actuated by the best of motives. I ask that the same consideration be shown to me as that which I readily admit to be your due. If I could think that in the burden of responsibility that now lies upon the Government you would indeed better those who blame you; if I only could think that you, in reality, would be guarding those interests which I am assured, in my own mind, it is your sincere desire to protect, you would have my vote. But I say from my innermost conviction, if the Bill in its present form becomes law, in the result the best safeguards that now exist will be destroyed, and the efficiency of the municipal administration will be impaired in a marked degree. And I shall feel the greater regret, because the passing of the Bill, in all its attendant circumstances, will certainly have a bad political effect."

The Hon'ble Dr. Asutosh Mukhopadhyaya said:—"It is not without some reluctance that I rise to offer a few remarks upon the motion and the amendment now before the Council. When I came here this morning I could not persuade myself to believe that there was really any room for prolonged debate, unless indeed, we deliberately chose to wander away from the question before the Council. The situation, if I apprehend it rightly, is this; under the standing legislative orders we were bound to submit for the approval of the Government of India the Bill as reported upon by the Select Committee; that Government, after a careful, and, it is said impartial consideration of the whole question, has come to the conclusion that certain changes of the greatest importance are essential, in so far as the constitution of the Municipality is concerned. This decision is embodied in a despatch which it will be idle to deny practically conveys a mandate to us, although it is couched in extremely courteous language. If this is the right view of the position in which we find ourselves, a position which

probably none of us anticipated when the Bill was sent up to the Government of India, I confess I find it difficult to discover what practical advantages are to be secured by a criticism of that despatch. If my hon'ble friend, who opened the debate to-day with one of those speeches which we all delight to hear, had ventured to assert that the decision of the Government of India is not binding upon us, if he had ventured to suggest that though the independence of this Council is somewhat mythical, we are at liberty to disregard the views of the Government of India, and proceed with the consideration of the Bill, clause by clause, his remarks would have been perfectly intelligible to me. If, on the other hand, my hon'ble friend had taken up a more moderate position and had ventured to suggest that the Council should approach the Government of India and respectfully ask for a re-consideration of their decision, on the ground that the views of the Members who represented the interests of the Corporation had not been rightly appreciated, his remarks would have been perfectly in order. In support of such an amendment, it would have been open to me to show that the despatch from the Government of India was remarkable for the fact that the conclusions embodied in it were not deducible from the premises. To take a concrete instance, in support of such an amendment, it would have been perfectly legitimate to show that assuming, as indeed it is assumed in the 13th paragraph of the letter from the Government of India, that the allegation is well-founded, that the existing Corporation has devoted itself to speech rather than to action; assuming further, that in order to check the abuses and anomalies complained of, it is necessary to reduce the numerical strength of the Corporation; assuming all this, it does not necessarily follow that the proposed reduction should be confined to the body of elected Commissioners alone. Indeed, if these positions are granted, and I shall assume for my present purpose that they are granted, it would follow that the reduction should not be confined to the body of elected Commissioners alone, but should be extended to the body of nominated Commissioners as well; unless, indeed, the Government is further prepared to affirm that the vice of speech without action is monopolised by the elected Commissioners, and the abuses complained of are traceable to them exclusively. But these comments, however just and well-founded they may be, are somewhat pointless in relation to the amendment before the Council. If these considerations cannot have any practical effect on our action in the present stage of the Bill, I submit with great confidence that the wisest course would be to refrain from such ineffectual criticisms. At the same time I frankly confess that the amendment proposed by my hon'ble friend seems to me a very reasonable one, and it has my hearty support."

The Hon'ble BABU JATRA MOHAN SEN said:—"I do not propose at this late hour to enter into a detailed examination of the proposals of the Government of India, especially those relating to the proposed reduction in the number of elected Commissioners and the introduction of the Bombay system into our municipal constitution which I intended to dwell upon. The matter has been sufficiently discussed by the Hon'ble Member who proposed the amendment, but I should like to offer one or two observations. The spirit in which, and the courtesy with which, the Government of India has dealt with this subject has led me to entertain the strongest hope that if a proper representation is made to the Government of India on the subject they will be prepared to re-consider the matter. But the reason why we should accept this amendment is supplied by the letter of the Government of India itself, where it is *said* that the proposal which they now make is new, having never been suggested before. That being so, it cannot be doubted that a proper and sufficient time should be allowed to the public to express their opinions on the matter, and to press their representations upon the Government of Bengal, the Government of India and upon the Select Committee, and it is proper and I should say just that further time should be given to enable the Select Committee to entertain and consider the views that may be expressed by the public on the changes which are proposed to be made in the Bill. It is therefore desirable, that the amendment proposed should be adopted."

The Hon'ble MR. OLDHAM said:—"Sir, my hon'ble friends who represent the Corporation have twice appealed to me for confirmation of their statements,

and though I am able to give that confirmation, the fact in no way diminishes the strenuousness with which I would oppose this amendment. They have made some general remarks in which my name has been brought in, in corroboration, and I beg, Sir, for permission to reply to them. The Hon'ble Mr. Apcar began his speech by pointing out that the diminished representation now proposed to be given must have the effect of obliterating the Muhammadan representatives on the Corporation. But what are the actual facts under the present constitution which he defends and would maintain? In the General Committee of the Corporation which was elected the other day, so far as it is composed of elected Commissioners, there is not one single Muhammadan, and so far as it is composed of nominated Commissioners, only one Muhammadan has been returned, my noble friend the Sahibzada Mahomed Bakhtyar Shah, who is not even a resident within the Corporation's area."

The Hon'ble MR. APCAR said:—"I was referring to Muhammadans in relation to the wards."

The Hon'ble Mr. OLDHAM continued:—"I understand my friend's correction, but do not see how it lessens the force of what I say. The whole controversy hitherto has turned upon the constitution of the General Committee which is the embodiment of the elective and representative principle in the whole Corporation, and Muhammadans are excluded from it. Therefore, the present constitution does not allow adequate Muhammadan representation, and Government must be looked to for a new constitution to redress the balance. My hon'ble friend went on to deny that there was anything like a Hindu predominance in the Corporation. He said that this Hindu predominance was an absolute myth. How can he possibly reconcile that statement with the facts? The Hindu predominance is an absolute demonstrable fact, and is the fact which induces me to oppose this motion for postponing the debate. It is true that I do not join, and have never joined, in the indictment against the Corporation. For more than a year I have been a Commissioner myself, and have worked with them, and therefore have been able to understand more clearly than before how, from time to time, such men as Sir Henry Harrison and Mr. Cotton and Mr. Lee, and now the present Chairman, Mr. Bright, have stood forth as the champions of the Commissioners. I believe them to be an upright and devoted body of men who have carried out with singular ability the duties entrusted to them, but I deny that they are representatives. Why in the very ward in which I live, and in which, under pressure of the plague, I have become a self-constituted Ward Commissioner, though the European vote is far stronger than the Indian vote, my elected colleagues are two Muhammadan gentlemen, one of whom is not even a resident. Taken by itself the circumstance is one which I personally could not regret, because one of these colleagues—a young gentleman, Maulvi Agha Mahomed Musa by name—was last year the life and soul of the Ward Vigilance Committee in the constant duties which it undertook, and you, Sir, have already acknowledged the usefulness of the work done by these Ward Committees. But though I congratulate myself on having such a colleague, this result was a happy accident, and he was in no sense a product of a representative system. Such a system has been tried as an experiment, and the experiment has completely failed. I do not concur with the Hon'ble Mr. Mackenzie in the history he has given of the introduction of Local Self-Government and in the reasons he assigns for excepting Calcutta and the other Presidency towns from the measures announced in 1882. There is no doubt in my mind that, in the year 1876, it was intended to give as full a measure of representative government to Calcutta as was possible, and that in 1882, when Local Self-Government for the interior was introduced, the Presidency towns were excluded from the new provisions, only because a measure intended for the mufassal could not be framed on so broad a basis as one for Calcutta. This does not alter the fact that the system of representation tried in Calcutta has failed. In 1888 it was amended in some respects, but still it failed. It was an experiment from the first, and the failure has been so complete that, unlike the speakers on the other side, I think that Government has still in this matter a *tabula rasa* on which to write, and a clear field for the trial of a different plan.

"My hon'ble friend, Babu Surendranath Banerjee, in the beginning of his speech, dwelt upon the broad basis upon which his remonstrance was founded. He referred to the popularity of the broad principles of Local Self-Government, which, I say, does not exist in Calcutta and to the general feeling on the subject among the people, while, so far as I have been able to see, no such general feeling exists in this city. It is now more than a year since this agitation has been started: we have had the means of observing it, and the longer it has progressed the more clearly it is seen that it is focussed in and confined to the class whom my hon'ble friend represents—I mean, the Bengalis. Perhaps at this stage I should ask what exactly we mean when we speak of the Bengalis? I daresay a person who thought himself well informed might reply that they are the people living under the government of the Lieutenant-Governor of Bengal, and that there are 72 millions of them. There is no need, in this Council, to dilate on such a delusion as that. But whom do we mean when we speak of the Bengalis? We only mean that intellectual race who are now competing with us in nearly every field, and I think out-stripping us in some. We mean only those whom I would call the Brahman and the lesser Brahman. By the lesser Brahman I particularly refer to the Baidya, who occupy in Bengal the place taken by the Kshatriya in Upper India, and who are sprung from the Brahman, the honoured offspring, though not the heirs. Then there is the great class or caste of the Kayastha, with whose claims Mr. Risley was so much impressed that, in that monumental work of his, he assigns them in Bengal a position almost higher than the Brahman's. This, however, the Brahman or the Baidya would not concede, and I think that I say nothing derogatory of the Bengali Kayastha when I refer to them too as lesser Brahman. I do not forget that from the habits of life of the Brahman there were associated with them in their households others who thus managed to partake of their influence and their lore; and so we see accounted for some of the nobility of Bengal, among them that distinguished lady, the late Maharani Swarnamayi; or as another instance, that eminent man, a patriot and a Bengali, the late Kristo Das Pal; or in another direction, our distinguished fellow-citizen and man of science, Dr. Mahendra Lal Sircar. But such exceptions only emphasize the fact, precisely as the Hon'ble Mr. Apcar's presence in their ranks does, that the class to which I refer is a single class, the Brahman and the lesser Brahman.

"The opposition which this measure has met is wholly a Hindu opposition, and I can now further narrow it down by pointing out that it is wholly a Bengali opposition. I deny that they are anything like a numerical majority in this city, or among the rate-payers. To make an estimate, you must eliminate all Europeans, Australians, and Americans, and foreigners; all the numerous Hindustanis and Uriyas; all Muhammadans; and also all those who do not belong to races or castes from whose hands a Brahman can take water; and then you will have left the Brahman, the lesser Brahman and the nine castes, who are an absolute and comparatively small minority of the Calcutta rate-payers. It is impossible to give the exact figures because the census has not distinguished the Hindu inhabitants by race, and the next census should do so. But, as one instance, I would appeal to the figures of the Excise Revenue in Calcutta alone as showing the immense numerical superiority of the races in Calcutta who do not follow the well-known habits of temperance and abstinence observed by the Brahman and the lesser Brahman—that is, the Bengalis, of whom I speak. I have already acknowledged the intellectual superiority of these people; but it is also a fact that the power of expression with which they are gifted is out of all proportion to their numbers. Because they express themselves so well and their intellectual powers are so high, we cannot be blinded to the fact that they are monopolising the sole power in the Corporation. That they have used their powers otherwise well I have admitted, and to this I can testify. But their monopoly is complained of by others, and as long as it exists there is no representation in its true sense in this city. As regards the complaints against this monopolising, the case briefly is that the city was founded 200 years ago by Englishmen on a site which even now, in common parlance among the people, is said not to be India, for it is a country which the Pandavas never visited. The town was founded for commercial purposes and

as a commercial colony, and in this colony the Indian colonists were allowed to join. They came first for security, and then for the sake of partnership, and later on for their own comfort and for the pleasures and advantages of civilization, and it is these last comers who are now found fighting for political power with the successors of the English settlers, and a small body of them is actually and exclusively predominant in the civic Government. I cannot say that they have usurped this power. They have attained it by fair means and their own abilities, and because it was left to them. But it has become a monopoly and is complained of, and as it is not representation, it has to be taken from them for it has turned out to be something quite different from what was intended. The sole difficulty I have found, so far as my own attitude in the case was concerned is, that we are now endeavouring to take away, after 21 years, a power of which they have been faithful trustees and which they have exercised so well.

"I have accorded my tribute to the Commissioners, though it must be remembered that in doing so I speak as one of them, who cannot appraise them so justly as an outsider. Nor do I by any means admit that they are perfect on all points or that their efficiency cannot be improved, or that it is not necessary to improve that efficiency. They themselves do not represent business or commercial classes, but all belong to a particular class—the Bengali literate class—the lawyers, the journalists, the professors. I do not suppose, Sir, that any one can imagine that when I enumerate these classes I do so with any tinge even of disparagement—the lawyers, the professors, the journalists—the classes who have always stood in the fore front where liberty and culture prevailed. The point in the present connection is that they are not the business men in a commercial city, they are untrained in the work they have to do, and they have no administrative experience. Last year, for nine months, I had the honour to hold the position of Chairman of the Port Commissioners, a body to whom both the Hon'ble Mr. Mackenzie and the Hon'ble Mr. Apcar have alluded; and though there is no constant parallel between their work and that which comes before the General Committee of the Corporation, there are many subjects which should be dealt with in the same way. I used sometimes to come from a meeting of the Port Commissioners to a meeting of the General Committee, and I am free to admit that I found myself more at home in the Committees of the Corporation than among the Port Commissioners. The reason was that the former's method was the method to which I was used, that is, the lawyer's method, to get to the bottom of a case by laborious inquiry and plainful analysis and purely intellectual effort. In the Port Commissioners I found myself associated with 14 men who were a great deal better than myself as regards the business which had to be done, because they thoroughly understood it beforehand and knew how it was to be carried out. Their Chairman fulfilled an entirely different function and, but that it seems to reflect on the Corporation I would say that, while among the Port Commissioners the Chairman talked and the Commissioners acted, in the Corporation it was the Commissioners who talked and the Chairman who had to take action, and then to answer to the Commissioners. The two bodies of course are differently constituted. But it is true that in the Corporation, while the Chairman is too often left to himself and without support, the Commissioners, on the other hand, fail to realize the tremendous strain they put upon him and on all their Executive by the other demands they make upon their time in meetings. In many matters, as, for instance, in the great drainage works now in progress, the General Committee of the Corporation might well take lessons from the Port Commissioners, and under the provisions of the Bill they will be able to have the benefit of that administrative experience and business knowledge which is the common quality among the Port Commissioners, but in the General Committee practically does not exist. In fact, the only business man among them is my friend Babu Nalin Behari Sircar whom I notice opposite as an attentive listener, of whom Sir Alexander Mackenzie in this place said the Corporation could not dispense with his services.

"I see I have made a note about the parallel which my hon'ble friend (Babu Surendranath Banerjee) drew from a comparison with certain towns in

England where the population is on much the same scale as that of Calcutta. I submit that there is no such parallel because the populations of those towns are homogeneous, and I have described how very different it is in Calcutta where, in consequence, the balance has constantly to be adjusted. Then there is that argument which has so constantly been brought forward, and which Sir Stuart Hogg seems to have originated. I mean the birds-of-passage argument. I remember Sir Stuart Hogg's regimé well. Benevolent it was no doubt, but it was despotic and autocratic to a degree which it is hard to realize in times like these. When I think of him as using this astounding argument, I can only look on him as giving up, with both hands, in the very plentitude and wantonness of power, everything that might be urged on his side. Do those who use this argument as applied to Calcutta ever reflect on the circumstances and Municipal Government of the city of London? I mean of the area lying within the old gates and walls, the jurisdiction of the Lord Mayor, and I suppose the richest and most famous Corporation in the world? Will they urge that the business men who manage it, because they are only too anxious to leave it, and will not even pass their nights within it, but, when they have finally done with it, betake themselves to the country, and often to distant lands, are unfit to manage it and are not interested in its Municipal Government? Why should it be supposed that Englishmen who look forward to retiring from business should be less concerned in the welfare of Calcutta and in the efficiency of its Government? Is it even *primâ facie* probable that the English, after founding and developing a city in the East, which has come to be one of the great cities of the world, would be as careless about its future as about its present? And this is what the argument really implies."

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR, said:—"Your Honour, I beg to propose as an amendment that instead of two weeks four weeks' time be allowed, so that the public might have sufficient time to consider the Bill and submit their views upon it."

The Hon'ble MR. BAKER said:—"I rise to order. The Hon'ble Member is precluded from moving this amendment Under the Rules no amendment can be moved without previous notice given."

The Hon'ble the PRESIDENT said:—"I must point out that under Rule 21 of the Rules for the Conduct of Business in the Council the Hon'ble Member is out of order, and I regret I cannot allow him to move his amendment."

The Hon'ble RAJA RANAJIT SINHA BAHADUR OF NASHIPUR, continued:—"I bow down to Your Honour's decision and I shall not take up the time of the Council with any lengthy observations, but I desire to offer a few remarks on the proposals now before the Government.

"We are grateful to the Government of India for the very kind and sympathetic way in which they have perused various criticisms on the Bill and for the kind assurance they have given that there would be no contravention of the broad principles of Local Self-Government already conceded. The Government is disposed to grant us a concession in the constitution of the General Committee on the model of a Standing Committee of Bombay; but, Sir, we could not welcome this concession as the number of elected Commissioners in the Corporation is reduced to half, and the Corporation itself is not allowed a free hand in the election of two-thirds of the members of its General Committee, like that of Bombay. I think the Government is inclined to reduce the numerical strength of the Corporation, on the belief that the existing Corporation has devoted itself to speech and to criticisms rather than to action. As I have no personal experience into the working of the Calcutta Municipality, I must refrain from making any observation on the point; but the Resolutions on the Administration Reports of the Calcutta Corporation of previous years recorded by Your Honour's predecessors in office, extracts of which I shall read with Your Honour's permission, will show that there has been marked and gradual improvement in the administration of the Calcutta Corporation and that its Commissioners all along have done excellent work.

"I quote extracts from the Resolutions on the Annual Administration Reports for the years 1889-90, 1890-91, 1891-92, 1892-93 and 1893-94:—

'The Lieutenant-Governor considers that these results, showing how largely the Commissioners devote their time and trouble without remuneration to municipal duties, afford the most satisfactory evidence of the growth of public spirit in the Metropolis.' And again.....'Upon the whole, there can be no doubt that the administration of the Calcutta Municipality during the past year was marked by very satisfactory progress, great attention to work on the part of the Commissioners and improvement in all directions.'

&c., &c., &c., &c.

'(2) Notwithstanding defects of form which have been pointed out, the report discloses much excellent work done by the Commissioners and real progress made in several important branches of municipal administration.'

&c., &c., &c., &c.

'In conclusion, the Lieutenant-Governor desires to congratulate the Commissioners on the improvements in the administration which have been carried out during the year and on the progress which has been made in works beneficial to the health and prosperity of the city.'

&c., &c., &c., &c.

'The Commissioners themselves have, as a whole, displayed a care and attention to their duties, which is very meritorious and has in some cases risen to the level of devotion.'

&c., &c., &c., &c.

'The thanks of the Government are due to the Commissioners for the interest which they have displayed throughout the year in the administration of the Corporation and the time and trouble which they have bestowed on the large questions as well as matters of detail brought under their consideration.'

'The present number of Commissioners was fixed after a mature and deliberate consideration, and I do not think that there has been any special necessity to make such a radical change now in that respect. If the Government of India have come to the final determination to reduce the numerical strength of the Corporation, I beg to submit that the reduction should not fall on the shoulders of the elected Commissioners only, as in such a case it will strike at the very root of Local Self-Government, the fundamental principles of which will be violated. If, following the Bombay system, the Government is inclined to reduce the number of elected Commissioners, I beg respectfully to point out that the system proposed to be introduced here materially differs from that adopted in Bombay. The Bombay Corporation elects its own President and the Standing Committee its own Chairman; but here the official Chairman acts as President of both the Corporation and General Committee. And again in Bombay, though only half the number of Commissioners is elected at ward elections, out of other half 16 are elected by Justices, 2 by Fellows, and only 2 by the Chamber of Commerce. But here there is no election by Justices or Fellows, and no seat is allowed even to native merchants or house and landowners; whereas 10 seats are allowed to European mercantile communities. So, Sir, if the Bombay system is at all to be given a trial here, I beg to submit that it be adopted in its entirety, and that out of 25 seats reserved for nominated and appointed Commissioners, other representative bodies of Calcutta, such as the British Indian Association, the National Chamber of Commerce, the National Muhammadan Association, and the like, should also be allowed to be represented in the Corporation, and the Corporation should be left unfettered in the election of two-thirds of the members of the General Committee. As the Government appoints 4 members of the General Committee, I humbly think that the Government appointees in the Corporation should have no voice in the election of the rest of the members of the General Committee. In conclusion, I leave the matter in Your Honour's hands with the full confidence that under your benign and sympathetic rule our appeal will not go in vain."

The Hon'ble MR. BAKER said:—"The discussion to-day practically divides itself into two parts, which have but a slender connexion with one another.

In the first place, we have the amendment moved by the Hon'ble Babu Surendranath Banerjee, the effect of which is to extend the time in which the Select Committee is to report from two weeks to six weeks, and to invite further expressions of opinion from the Corporation and other public bodies. In the second place we have the lengthy, elaborate, and I may say, discussive criticisms which have been delivered to-day—not only upon the proposals of the Government of India, but upon a great variety of other matters, which, in my judgment, are not strictly speaking before the Council. I shall deal with these two matters separately; and, as the amendment of my hon'ble friend is a comparatively small matter, I shall take it up first and very briefly; because what my hon'ble friend said upon it has already been met by the Hon'ble Mr. Mackenzie. I am entirely opposed to the proposal to postpone the consideration of the Bill by the Council for six weeks, because, as the Hon'ble Mr. Mackenzie has said, if this is done, it will be absolutely impossible for the Council to dispose of this Bill during the present session. To-day is the 7th August. If we give six weeks to the Select Committee to submit its report, that will carry us on to the 18th of September; and then, when the report is submitted, it will be necessary to re-publish the Bill as amended by the Select Committee, and that will involve another fortnight's delay. That will bring us to the beginning of October, shortly before the Puja holidays, when no business can be done; and it will be necessary for the Council to adjourn, and we shall not be able even to begin the discussion of the Bill itself before the cold weather session. There are the strongest grounds for deprecating any such delay. The Bill has been before the public and the Council for a long time, and the subject has been discussed for, I think, two and a half years. It is now eighteen months since the Bill was formally introduced. During that time the Bill has received an enormous amount of most minute and most careful criticism and examination not only by the Corporation and the various public bodies to whom it was referred, but also at the hands of the Select Committee. And it is unhappily true that some of the proposals in the Bill have given rise, among a certain class, to a good deal of bitterness and recrimination. The constitutional sections of the Bill are regarded in some quarters with dislike and even with dismay. I think therefore that any further delay is greatly to be deprecated. During the last two years, the Municipal Commissioners, the Municipal Executive, and the Municipal establishments have been in a state of agitated suspense and uncertainty—a state of things which cannot but do harm and cannot conduce to harmonious or efficient work. It is imperatively necessary, therefore, to bring this unfortunate controversy to a termination with the least possible delay, and I trust the Council will not endorse any device for protracting this matter further.

"The hon'ble the mover of the amendment has referred to the 8th paragraph of the letter of the Government of India, and said that in that paragraph the Government of India indicated certain features of the Bill which are not in entire accordance with the principles laid down, and he suggested that it would therefore be necessary for the Select Committee to go through this Bill over again. Now, that is not the case at all. In the very next paragraph of the letter the Government of India indicate what are the features to which they take exception, and in a subsequent part of the letter they indicate the remedies which in their opinion should be applied, and it is to those features only that the Select Committee will have to refer; and they will not have to go through the whole Bill again. It has been said by the hon'ble mover of the amendment that the Corporation ought to have an opportunity of expressing their views. That is not an argument to which I can attach much weight. The Corporation is very strongly represented in this Council by six, if not seven, members, who are also Members of this Council. What the Hon'ble Member probably referred to was the elective section of the Corporation, but even that is most fully, and if I may venture to say so, most efficiently represented by the hon'ble mover of the amendment and the Hon'ble Mr. Apcar, who are both elected Members of the Corporation. We have heard to-day the exhaustive and vigorous attack on the proposals of the Government of India with which the two Hon'ble Members have favoured us, and

which will leave the Corporation little or nothing to say. I do not think that if an opinion was called for from the Corporation, they would be able to add one single observation or one single argument which has not already been adduced, or to bring forward one single new fact or illustration in support of those arguments. The proposals of the Government of India are no doubt very important, but as has been pointed out, they are comparatively simple, and it is possible to state the substance of them in a very few words. The amendments which will be necessary to give effect to those proposals are comparatively few and comparatively simple. They are already in print, and if the Select Committee will give their attention to the matter, I feel sure there will be no difficulty in completing the amendment of the Bill in the manner which is desired by the Government of India within the period which has been named in my motion. That is all I have to say in regard to the amendment now before the Council.

"I now turn to the much more important proposals of the Government of India which have received the acceptance of the Bengal Government. This question is a very much more important one than the Hon'ble Member's amendment. I will divide the proposals of the Government of India into two parts—first, that portion of the proposals which relates to the constitution of the Corporation itself, and then I will deal with what has been said with regard to the constitution of the General Committee. Primarily, the proposal put forward by the Government of India is that the number of the elected Commissioners shall be reduced from 50 to 25, and that the number of the whole body be reduced from 75 to 50. The reasons given by the Government of India for these proposals are two. In the first place they point out that in the past the Commissioners have been too much addicted to talk—to speech and criticism—rather than to action, or to allowing action to be taken, and the Government of India consider that the reduction in their number will tend to prevent this tendency in the future. Secondly, they consider that by this reduction there will be established in Calcutta a strict equality and balance of interests between the European and native elements in the Corporation, or, as I should prefer to put it, between the elected Commissioners on the one hand and the representatives of the Government and of foreign trade on the other.

"With regard to the allegation that too much time is taken up in making speeches, I do not desire to say very much. Both the Hon'ble Babu Surendranath Banerjee and the Hon'ble Mr. Apcar have challenged it, and the former has referred to the opinion expressed by Sir Henry Harrison in 1888. Personally, I have never attached much weight to the proposal to reduce the number of Commissioners, *per se* and I am very much inclined to agree with Sir Henry Harrison that the time taken up in speaking does not depend so much upon the number of the Commissioners, but upon the number of those who desire to speak. I rather doubt whether, if the total number of Commissioners is reduced by one-third, there will be a proportionate reduction in the time occupied in speaking. But there is good deal to be said on the other side. In the first place, the proposal for a reduction in the number of Commissioners does not stand by itself. It is intimately connected with and forms an integral part of the very important reform proposed for the re-adjustment of the balance of interests between the two wings of the Corporation. Then again, Sir Henry Harrison was no doubt a very strong and efficient Chairman, and his opinion on all municipal matters carries high authority; but there have been strong and efficient Chairmen since his time, *vivera fortes post Agamemnona*, if I may vary a well-worn quotation, and some of these strong and efficient Chairmen have held a very decided opinion that the present number of Commissioners is too great for efficient administration. And, lastly, there is the undoubted fact, which cannot be denied, that 50 Commissioners are not likely to take up so much time in speaking as 75 Commissioners; so that there will be some reduction in the time taken up in talk, although it may not be in proportion to the actual numerical reduction.

"But the second reason adduced by the Government of India for the reduction of the number of Commissioners is of much greater weight, and to my mind it goes to the root of the whole matter, and it will be necessary for me to occupy the attention of the Council for some little time in dealing with it. Some of the Hon'ble Members have told us to-day that representation is the

true and only basis of taxation, and they have said in one way or another that no system of Government which does not place the municipal administration of Calcutta in the hands of the elected representatives of the rate-payers is in accordance with the true principles of Local Self-Government. I understand that this is a correct description of the proposition laid down by the Hon'ble Babu Surendranath Banerjee. The Hon'ble Mr. Apcar pointedly drew attention to the fact that a very small proportion of the municipal rates is paid by the mercantile community in Calcutta. The hon'ble mover of the amendment also stated that the Ward Commissioners were the elect of the people, although he was good enough to admit that they were not actually elected by the whole of the rate-payers. I fully expected that some figures would have been laid before the Council by the Hon'ble Members who opposed my motion, to show to what extent the elected representatives on the Corporation do actually represent the people of Calcutta; but they have not done so. I will now supply that omission. I will refer to the figures of registered electors and the figures of registered rate-payers. The number of registered voters in Calcutta is 13,890; *i.e.*, about 2 per cent. of the total population. The number of rate-payers is 60,518; that is the number of persons who pay the consolidated rate. There are also a certain number of persons who pay other municipal taxes, such as the tax on horses and carriage-tax, the tax on carts, the license-tax on trades and professions, and other small items. It may be taken that the total number of rate-payers of all kinds is between 62,000 and 63,000. Now I will ask the Council to consider the true significance of these figures—13,890 against 63,000."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"Those who do not pay Rs. 24 a year should be excluded."

The Hon'ble MR. BAKER continued:—"What has been said is that the elected Ward Commissioners are the representatives of the rate-payers. But the figures show the fact that they are not elected by so much as one-fourth of the total number of the rate-payers. The total number of the persons entitled to exercise the franchise in Calcutta is less than one-fourth of the rate-payers, less than 2 per cent. of the whole population, and less than $3\frac{1}{2}$ per cent. of the whole male population of the town. This is a state of things which has not even an approximate parallel in any town in England of which I am aware. The hon'ble mover of the amendment has referred to some figures showing the number of members of different Corporations in England. They are, I believe, quite accurate, and I think the Hon'ble Member is entitled to all the advantage he can derive from them. But I should like him to look into the figures and numbers in the cases he has cited—towns like Glasgow, Leeds, Birmingham, Hull and Manchester—to look at the total number, and to compare the proportion of voters, and of registered electors, with the total population of the town. He will then find that in Glasgow there is one registered voter for every seven of the population; in Birmingham, one in five; in Leeds, one in four; while in Calcutta, the number is one in fifty of the population. In English towns women have votes; in Calcutta that is not the case. Therefore it is necessary to take only the male population of Calcutta, which, according to the last census, was 415,000. This means that the number of the registered electors is only $3\frac{1}{2}$ per cent. of the whole number of males. Now I think it is obvious upon the face of these figures, that no sort of conclusion can be drawn from them to show that the elected representatives of the rate-payers in Calcutta have any claim to be considered as standing on the same footing as the corresponding representatives in England. The figures referred to by the Hon'ble Member are not such as I think the Council should accept as having any bearing upon the matter of representation. Some people in this country talk of the elective system as if it was a means to an end. The hon'ble the mover of the amendment said that the Ward Commissioners were the elect of the people, that the supreme power of control should be vested in the representatives of the rate-payers, and that any reduction in their number will lay the axe to the root of the principles of Local Self-Government.

"It is, I assert, nothing of the kind; the elective principle is only a means to an end. A far safer guide, the only safe guide, for our present purpose, is to have regard to the principle of representation, the representation of interests. It is because the system of election in Calcutta has wholly failed in practice to yield truly representative results that it has been found defective and now stands in need of reform. That system has hitherto placed the whole Executive power in the hands of a single class. I mean the middle class Bengali Hindus. The Hon'ble Mr. Apcar in his speech denied that there was any Hindu predominance. But I maintain that the fact is notorious and cannot be denied. Out of the 50 elected members of the present Corporation, 37 are Bengalis, and it is my experience and the experience of every one who has sat on the Municipal Board and more especially on the General Committee, that the Hindu representatives on the Corporation can, if they wish it, sweep everything before them. [The Hon'ble MR. APCAR said:—"My point is that they do not sweep away everything in their own way."] I do not wish, for one instant, to say a single word of disparagement of this class, or in depreciation of their merits and many good qualities. There are many of these whom I am proud to regard as my personal friends, and I hope that there are some who look upon me in the same light. But is it in accord with any legitimate scheme of Local Self-Government, that the whole administration of municipal affairs in a town, such as Calcutta, should be placed in the hands of a single class, and that class one which, as Mr. Risley has pointed out, has no special aptitude for trade and who look upon the foreign commerce and trade of Calcutta as no particular concern of theirs?

"We have been told that the Europeans, including Eurasians, form a small numerical minority of the whole population, and we have been told that the amount of taxes paid by the commercial community is comparatively insignificant. The proportion they pay is commonly said to be 30 per cent. [The Hon'ble MR. APCAR said:—"Personally they may pay largely, but as business firms they do not pay much."] It is argued from these facts that it is unreasonable and unjust that the Government and the commercial community should receive an equal degree of representation with the native and non-commercial classes. [The Hon'ble Mr. Apcar spoke as if the Corporation had created Calcutta. I deny that statement. I altogether reject the proposition that you can come to any conclusion on the question of representation of interests upon the basis of an estimate of mere number or of municipal rates. There are two great causes which have made Calcutta what it is, which have raised it from its position as a small obscure thinly populated village, to its present position as a great, rich, flourishing and populous city. The first is the fact that for many years it has been the seat of the Government, both of the Imperial and Provincial Governments, and the capital of the greatest Empire in this Continent; and, secondly, the fact of the existence in it of an enormous foreign trade. It is no exaggeration to say that these two causes acting together, and more especially the second of them, have actually created and called into existence nine-tenths of the whole value of property in Calcutta. The Hon'ble Mr. Oldham has referred to figures relating to the Excise Revenue of Calcutta. I will refer to the figures of the Income-Tax. If the Council refers to the Income-Tax returns, they will find that in a single year the towns of Calcutta and Howrah taken together pay Income-Tax, approximately, in amount equal to the amount paid by the whole of the rest of Bengal taken together. And to what is that due? If we subtract from the Income-Tax paid by Calcutta the amount paid by the great body of Government servants; if we subtract the whole amount paid by the jute and other mills and by European and native firms engaged in the foreign trade of the port; and if, lastly, we subtract the amount paid by the great mass of other people who are attracted to Calcutta to minister to the wants of those classes, how much will remain? It will not be more than the merest fraction of what is paid at present. The Hon'ble Mr. Oldham has also referred to the great foreign population of Calcutta. I do not think it is generally known how large a proportion of the population of Calcutta is composed of foreigners—foreigners not merely to the city, but to the province of Bengal. The other day, I had occasion to look at the last Census Report of Calcutta, and on glancing at the table dealing with language, I found

some very striking figures. The total population is put down at 650,000 persons, and of these only 360,000 claimed Bengali as their mother tongue, the remainder, 290,000 claimed as their mother tongue some language or languages none of which are indigenous within 250 miles of Calcutta. Even this is not all; for it is notorious that a great number of those who serve as clerks, who work in such numbers in Government and business offices in Calcutta, are not natives of this city, but have come here to earn their livelihood. Can we imagine what would be the fate of Calcutta if, by any cataclysm of nature or any political misfortune, it should cease to be the seat of Government and be deprived of its foreign trade? Can any limit be placed on the degree of ruin in which all classes would be involved? Nine-tenths of the value of landed property would be swept away, and in a brief space of time the town would dwindle away to the level of Port Canning or Diamond Harbour. As Mr. Risley admirably expressed it when introducing the Bill into Council, landlords would lose their tenants, lawyers would lose their clients, shops would lose their customers, schools would lose their pupils, and Calcutta would sink to the position of a city of the dead, a decayed and deserted capital, like Bruges, or Ravenna, or the once famous Cinque Ports.

"To measure the relative importance and value of the interests represented by Government and foreign commerce by the amount of municipal rates which is paid by traders, is as much as if we should seek to measure the value of national education by the salaries paid to the teachers; or the value to the country of a great railway by the dividends paid to the shareholders. These two interests—the interests represented by the Government and by foreign commerce—are of greater importance and value to the well-being of Calcutta, than all other interests taken together; and so far from its being unjust to give them an equal measure of representation on the Municipal Board, I maintain it would have been perfectly legitimate and equitable to give them a still higher proportion of representation.

"The Hon'ble Babu Surendranath Banerjee has referred to the fact that in 1876 Sir Richard Temple would have been prepared to accept a proposal to fix the proportion of elected Commissioners at three-fourths of the whole number upon certain conditions, that is, that different nationalities should be represented. I think Sir Richard Temple was referring to the motion brought forward by the Hon'ble Mr. Brookes on behalf of the non-official Europeans. The Hon'ble Member also mentioned the motion brought forward by Mr. Irving in 1888, to reduce the proportion of elected Commissioners from two-thirds to one-half. I am glad that these two proposals have been referred to, because they illustrate, in a very significant way, the attitude of the non-official Europeans in this matter, and the growth and development of opinion amongst them. Mr. Brookes brought forward his motion in 1876, at a time when the principle of election had been entirely untried in Calcutta, and no one knew how the principle would work in practice. The whole thing was an experiment. The opinion which Mr. Brookes expressed was based entirely upon *a priori* principles. It was not derived from experience. But twelve years' experience was quite sufficient to teach the non-official Europeans their lesson. During these twelve years they saw how the elective system had worked, and they took the earliest opportunity in their power of proposing that some more reasonable proportion of elected members should be allotted to them. I think the motion brought forward by the Hon'ble Mr. Irving in 1888 was entitled to greater weight than that of the Hon'ble Mr. Brookes in 1876, for the reason that the one was based upon experience, while the other rested only on theory.

"The Hon'ble Mr. Apcar has made what I can only regard as an attack upon certain proceedings of the Executive. It does not appear to me that that is a matter altogether germane to the motion before the Council; and I regret the more that it was made because I have no personal knowledge of the facts and am not in a position to make any remarks upon it. But I am given to understand that there is a complete answer to all that the Hon'ble Mr. Apcar has said, and that although the facts stated by him are substantially accurate, nevertheless the inferences he sought to draw from them are entirely incorrect.

"A good deal has been said, in the course of to-day's proceedings, about the Bombay system and of its advantages and disadvantages, and the Hon'ble Member, Babu Surendranath Banerjee, was at some pains to declare that he was opposed to that system, and so also was the Hon'ble Mr. Apcar. I understood the former to suggest that the Government of India were under a misapprehension in quoting a certain passage in the note of dissent signed by the Hon'ble Babu Surendranath Banerjee and Babu Norendro Nath Sen as indicating that those Hon'ble Members were in favour of that system. Since this correspondence was published I have noticed that the passage in question in the note of dissent has been adversely criticised, in some of the Anglo-Indian papers, as calculated to mislead, and it is possible that these criticisms were in the mind of the Hon'ble Member when he made the disclaimer I allude to. Now it is not within my province to intervene between the Hon'ble Member and his critics, and I do not doubt that he is quite able to take care of himself. But in fairness to the Hon'ble Member I ought to state clearly that neither he nor Babu Norendro Nath Sen at any time gave the Select Committee to understand that they were in any way advocates of the Bombay system. On the contrary, on one occasion when this matter came incidentally before the Select Committee, the Hon'ble Members expressly stated that they did not want the Bombay system. There has certainly never been any misapprehension in my mind as to the attitude of these two gentlemen in this matter, and I think the other Members of the Select Committee, if referred to, will bear me out.

"On the other hand, I do not think that the Government of India can fairly be charged with any misapprehension. An attentive study of their letter of the 17th June will show that the Government arrived at their preference for the Bombay system as a model for Calcutta, by an entirely independent examination; and in paragraph 15 of that letter they plainly state that their preference had been actually expressed at a very early stage in the history of the Bill. The proposals of the Government of India have been arrived at without any reference to the note of dissent, and it is obvious to any one who will read the note of dissent that the two things are by far from identical. The Government of India have never proposed to introduce the whole of the Bombay system into Calcutta, neither has any one else that I know of. What has been proposed is to select certain features of the Bombay system which have been found by experience to work well, and which appear to be suited to the arrangements of Calcutta, and then to engraft those features upon the Calcutta constitution. Each of the parts so proposed for importation rests upon its own merits, and in no case has any suggestion been put forward merely because it forms part of the Bombay system.

"Both the Hon'ble Babu Surendranath Banerjee and the Hon'ble Raja Ranajit Singha Bahadur complain that the arrangements proposed by the Government of India, in respect of the constitution of the Corporation, do not follow in substance the Bombay model. Even if it were true they do not follow the Bombay model I am not particularly concerned to defend it, because, as I have said before, there has never been any intention to follow that model slavishly; but when these gentlemen tell us that the basis of the Bombay system is not one-half elected and one-half nominated members, I must challenge that allegation. [The Hon'ble BABU SURENDRANATH BANERJEE said:—"I said that if a close analysis is made between the system in force in Bombay and the system now proposed, it will be found that they are not identical."] I do maintain this, that the basis of the Bombay constitution is undoubtedly one-half elected and one-half nominated Commissioners. Who are the Justices in Bombay? How do they get their appointments? These Justices in Bombay do not correspond to the Honorary Magistrates in Calcutta; they do not try cases like Honorary Magistrates do here. What their functions are I do not know, except that they have the power of returning a certain number of members to the Bombay Corporation. But one essential feature regarding them is this—that the whole of the Justices are nominated by the Government, and they hold their office purely and simply as nominees of the Government, and therefore, in effect, there is no practical difference between the Justices nominating certain members of the Bombay Corporation and the fifteen Commissioners

who are to be nominated by the Government here. If the Hon'ble Member contends that the Councillors elected by the nominated Justices owe their seats to election, why does he object, as he has done, to the precisely similar arrangement which is proposed for the General Committee? It has been said that four of the members to be elected to the General Committee by the nominated Commissioners will be nominees of the Government; how then can he say that the 16 members to be elected by the Justices in Bombay are not nominees of the Government?

"The Hon'ble Mr. Apcar said something to the effect that the reduction in the number of ward Commissioners from two to one in each ward will have the effect of entirely disfranchising the Muhammadan community. That statement has to a considerable extent been answered by the Hon'ble Mr. Oldham. The Muhammadan community possesses nine per cent. of the voting power; possibly a considerable number of them will be knocked out; but I am not prepared to admit that the whole of them would be knocked out. If it were so, the remedy would be in the hands of the Government, who would appoint a considerable number of Muhammadans. Then the Hon'ble Mr. Apcar said that would diminish the power of the Government to nominate representatives of other communities; but what he inferred from this is not correct; because as the total number of Commissioners is reduced, the relative value of nomination will be increased, and the powers of the Government will in no way be interfered with.

"This is all, I think, I need say in reference to the first part of the proposals of the Government of India in regard to the constitution of the Corporation.

"I now turn to what has been said in regard to the constitution of the General Committee. The object of the proposal with reference to the constitution of the General Committee, the main object, is to get rid of the want of similarity, which existed in the original Bill, between the constitution of the General Committee and the constitution of the Corporation; and surely this object is sufficiently reasonable in itself not to call for any elaborate defence? There can be no doubt that the absence of similarity in the constitution of these two co-ordinate authorities is a possible source of friction and of danger, and to a certain extent it was a defect in the original Bill. And no one pressed this argument in the Select Committee with greater force and persistence than the Hon'ble Members who represented the Corporation. It was probably unavoidable, so long as the elected Commissioners out-numbered the nominated Commissioners by two to one. But now that these two wings are to be made of equal strength, the reason for it disappears.

"From some remarks, which have been made to-day, it seems to be supposed that in the General Committee there will not be a true balance of interests between the two parties, the elected section and the nominated section. Some gentlemen seem to think that the Government will invariably select its four members from among the nominated Commissioners only. I know of no authority for such a suggestion. The Government intends to preserve an absolutely free hand in the selection of its four members on the General Committee; and will always endeavour to select those Commissioners who, in its opinion, are most likely to do honest and efficient work, without regard to the particular wing or section of the Corporation to which they belong.

"Then, again, it has been urged that it is wrong in principle for the Government or any outside authority to make any direct appointments to the General Committee, and that once the Corporation is constituted by election and nomination, there should be no further interference, and that the Commissioners should be left to elect to the General Committee any persons whom they think fit in any manner authorised by law. As a matter of theory I am not prepared to accept this view without much stronger reasons than have been adduced. And as a matter of precedent, we know that this is the very system which has worked and worked well in Bombay. But apart from either theory or precedent, there is a good practical reason why the Government should be directly represented on the General Committee. Under the law of 1888 the General Committee is a mere Committee of the Corporation; it has no powers of

its own; and all its resolutions are subject to the confirmation of the Corporation in Meeting. But under the new Bill we have changed all that. Under the new Bill the General Committee will become a co-ordinate authority. It will possess considerable independent powers; and none of its resolutions, with certain specified exceptions, will require confirmation by the Corporation. It will be an independent and, within its own sphere, a governing body. Therefore, it seems to me there is as much reason for Government to be directly represented on the General Committee as on the other co-ordinate authority, the Corporation itself.

"I now pass on to what has been said by the Hon'ble the Raja of Nashipur in reference to the proposal that the eight members of the General Committee who are to be elected shall be chosen in equal proportions from the two wings. He said there was no such rule in Bombay. That is quite true, but I do not admit that the fact that there is no such rule in Bombay is any reason why there should not be such a rule here. The Council are aware that in the Corporation the elected and the nominated members are to be equal in numbers. Now if we follow the Bombay rule and allow these eight members to be elected to the General Committee by the whole body of Commissioners elected and nominated, and if each section puts forward its whole voting power, then each of the two sections would be able to elect one-half of the eight members. This result is what Government desires to attain, and it has been thought desirable both by the Government of India and by the Government of Bengal that provision should be expressly made for it in the Bill, and that it should not be left to the mere chances of election.

"This is all I need say, as I think I have answered every relevant point which has been raised. There are many other points to which I have expressly not referred, because they appeared to me to be points which go beyond the motion before us. But, so far as I can recollect, I have gathered together all the relevant arguments. I hope and I confidently expect that the Council will reject the amendments proposed by the Hon'ble Babu Surendranath Banerjee and will accept the substantive motion which I have made."

The Hon'ble MR. APCAR said:—"I desire to say a few words by way of personal explanation. The Hon'ble Member in charge of the Bill has challenged a statement I have made, and said there is a complete answer to it. I only referred to the matter in illustration of the unbusinesslike way in which the work of the Municipality is done. If it happened to be an attack upon the Executive, I am sorry, but that was not my primary purpose. The facts were formally mentioned before the General Committee, and there was no contradiction to any of the facts I put forward. I shall be glad to supply the Hon'ble Member with a copy of my note on the subject."

The Hon'ble BABU SURENDRANATH BANERJEE in reply said:—"I hope and trust that the Council will not follow the advice of the Hon'ble Member in charge of the Bill and reject my amendment. The Hon'ble Member has remarked that if the amendment was accepted it would be impossible to dispose of the measure in the present session of the Council. I think that in a matter of this magnitude and importance it is very desirable that the public should have the amplest opportunity of considering and discussing the results which would follow from the adoption of the highly important changes proposed by the Government of India. I desire to correct some mistakes of fact which the Hon'ble Member in charge of the Bill has made in the course of his speech. He said that this Bill has been before the public for two years and a half, but as a matter of fact it has been before the public for one year and five months, the first intimation of the measure having been given in February 1898. Then there are important points which the public and the public bodies have not considered, questions relating to the reduction of the number of elected Commissioners, the constitution of the General Committee and other matters. These are questions which have never been before the Corporation and the public, and I think it right that they should now be

consulted in regard to them. My hon'ble friend has observed that the Corporation is well represented in this Council, and it is not necessary to refer it again to the Corporation. Why then was the Bill originally referred to the Corporation? It is a matter of the first importance, and I hope my hon'ble friend will agree to refer the Bill to the Corporation whom it most vitally affects. Let us have some more light, some kindly light thrown upon the subject. I am not quite sure that the European members of the Corporation might not be opposed to the dangerous innovations which have been proposed by the Government of India. I think it would be only fair to refer the Bill to the Corporation for their opinion upon the new proposals before the Council.

"Then there are the remarks made by the Hon'ble Member who represents the University, in the course of which he said he could not believe that any criticisms which might now be made would affect the question. I regret I am not prepared to accept that view. I have said that the Government of Bengal and the Government of India are highly deferential to the expression of public opinion. If we are able to put forward views that are sound and reasonable, I have not the slightest doubt that the Government will pay to those views the consideration to which they are entitled.

"Then there is the rule which guides our deliberations, that when a motion is made for reference to a Select Committee, the Members of the Council have the opportunity of declaring their views on the principle of the measure so proposed to be referred. Therefore, we ought to take this opportunity of saying what we have to say, and leave it to the Government to accept or not the proposals which we put forward.

"I am very sorry that certain remarks should have been made in this Council which imply a reflection upon some of those who have taken part in the agitation against this Bill. Such remarks are, I think, deeply to be deplored. The Hon'ble Mr. Mackenzie was pleased to say that a number of agitators had got up an agitation at public meetings in this town and elsewhere against this Bill, and that all this agitation was the work of wire-pullers, of which the Government need not take the slightest notice."

The Hon'ble MR. BAKER rose to order:—"The Hon'ble Member is only entitled to reply to remarks made upon his amendment. He is not entitled to reply on the original motion."

The Hon'ble THE PRESIDENT said:—"The Hon'ble Member can reply to the remarks which have been made."

The Hon'ble BABU SURENDRANATH BANERJEE continued:—"Men representing the largest interests in this town have taken part in these demonstrations and have recorded their protest against the provisions of this Bill, and it is idle to say that these meetings were got up by wire-pullers and political agitators. It is all very well for my hon'ble friend to call others political agitators, but what would he say if his accusers were to turn round upon him and urge that he was a bit of a political agitator himself and that he sent round a circular to the tea-planters of Sylhet and Cachar asking them to set up an agitation in favour of this Bill? Would he not feel indignant and would we not sympathize with him in his distress? At the public meetings which have been referred to, the richest men in this town were present—the representatives of the Seals, the Mullicks, the Sets, the Rajas of Sobha Bazar and of various other influential families, of gentlemen who own about three-fourths of the European portion of this town. What would be the fate of the Hon'ble Member and his friends if they made up their minds to oust them from their palatial residences at Chowringhee? Why they would be like the wandering Jews and other homeless people!

"As to the voters in England, the qualification was a £10 rate, which almost every householder possesses. Here it is Rs. 24 a year. [The Hon'ble MR. BAKER —The comparison is not between Rs. 24 and £10, but the annual value of the house on which the tax is assessed. The valuation of the house is £10, and every body inhabiting a house of that assessed value is a voter. Here

it is an assessment of Rs. 150 a year.] That is so, and it amounts to universal suffrage, for almost every dwelling in England has that valuation.

"Once again I desire to say, on behalf of the people of Calcutta and of those whom I have the honour to represent, that if the recommendations of the Government of India are embodied in this Bill, it is our deliberate opinion that it would mean a death-blow to the prospects of Local Self-Government in Calcutta. My hon'ble friend the member in charge of the Bill is not aware of the deep-seated disappointment which will result by rushing this Bill through in its final stages. It would be much better to allow a little time for the discussion of this measure than to hurry it through in this fashion. That is the *dictum* of political wisdom, and I ask that the Council will adopt that *dictum* by its vote."

The Hon'ble THE PRESIDENT said:—"It will be expected of me that on an occasion of so much importance I shall close the debate myself. I think it is hardly necessary after the excellent speech the Council has heard from the Hon'ble Member in charge of the Bill. And at this stage of the afternoon, what I have to say should be said as shortly as I can. I should like to speak to the Hon'ble Members who are opposed to the Bill in the frank and simple words that come from sympathy in their disappointments. When I first spoke upon this Bill last November, I remember saying that I realised their pain and vexation. It is not possible that a measure of this kind could have been introduced without rousing these feelings. Every member of a body, which is alleged to have disappointed expectation, is certain to resent the imputation with warmth. But it is against human nature not to be sorry for the man who means well and nevertheless does not succeed. And it has been in that attitude that I stand to this Bill to-day. My regret is sincere that it should be necessary to wound the feelings of a body whose intentions have been excellent.

"But, as I said last year, tenderness of feeling cannot be allowed to stand in the way of changes that are essential to the good government of the capital city of India, and the judgment which I expressed last year, and which I ventured to think was impartial, was that the changes of constitution proposed in the Bill were essential. I have listened with interest to-day to the eloquent, and in many points practical, speeches which have been delivered in opposition. I listened with respect to the assurances of the Hon'ble Members who are themselves Municipal Commissioners that the administration of Calcutta is all that it should be, and that, if there are defects, it is not the Corporation that are to blame. I am not, as they are, an expert, but nevertheless in a matter of this sort I must trust my own eyes and my own experiences, and with whatever regret I say it, I am compelled to say that in my judgment there is imperious need of improvement in the methods of administration in our city.

"The opinions of the majority of this Council, the opinions which I expressed last year, and which I have now been compelled to reiterate, and the dissents from those opinions which were recorded by the Hon'ble Members, have now been before another tribunal. I want you to consider what that tribunal is. It is a Government of India so completely changed within the last two years that the Military Member of Council is the only representative left of the body which accepted the proposals of Sir Alexander Mackenzie in 1897. It is a body of the highest and most experienced officials in India, and it is presided over by a Governor General who has engaged himself, as you all know, with the most lively interest in inquiring for himself into the merits of this controversy. It was to this body that our controversy was submitted. I can conceive no body whose impartiality and whose judgment were more to be trusted.

"The judgment has been that for efficient administration a change in the constitution of the Corporation must be made, and that we must go still further than we proposed in the amendment of the constitution. That conclusion is, of course, a disappointment; but I think all reasonable men will admit that it is a conclusion which we must now accept without further demur. A dissatisfied party appeals from the High Court to the Privy Council. But if the Privy Council decides against him, he may personally consider the decision wrong, but there is no more to be said or done. That is the case here. There has been an appeal to a tribunal whose impartiality none can impugn,

and that tribunal with a courtesy and consideration which only illustrate the strength of its opinion has given its judgment. To that judgment we must conform.

"Of course, it is a disappointment to the losing side. In that disappointment I can myself participate, for the judgment is, in a measure, against myself. The conclusion is not that Sir Alexander Mackenzie's Bill went too far, but that it did not go far enough, and that the number of elected members on the Corporation must be reduced from fifty to twenty-five. Sir Alexander Mackenzie was of opinion that this reduction was unnecessary so long as the Executive was strengthened and strong. The Select Committee gave the Local Government clear and definite powers of intervention in case of any miscarriage. With this safeguard I myself was prepared to be responsible for the good government of the city without further change of the constitution. That is not the opinion of the Government of India. They have balanced, as I did, advantages and disadvantages. They give greater weight than I did to the danger of friction, and call upon us to make an adjustment which shall avoid it. This is the deliberate conclusion of an impartial tribunal. I may and do regret it, just as some other Members of this Council have done to-day, but the arguments they use have never been absent from the minds of my predecessor or myself, and I cannot deny that in their serener atmosphere the Government of India are better judges, than we in the stress of contest, as to the exact weight that should be attached to them. I have, therefore, on the part of my Government accepted their conclusion. I cannot expect the Hon'ble Members who oppose the Bill to accept it without objection, but I am sure that they and the community of Calcutta will, in their further attitude in this discussion, remember the character of the tribunal which has given this decision and the sympathetic assurance with which that decision has been conveyed. It is final; it has to be accepted. What has now to be done, let us, for the reasons given by the Hon'ble Mr. Baker, do as quickly as a just consideration of details will permit. I indulge the hope that the Council will join in this resolve, firstly, because of the notable moderation of the speeches that have been made in opposition, and, secondly, because of the assurance that my hon'ble friend Babu Surendranath Banerjee gave us in his opening speech—if he thought the Government of India had finally made up their mind, he would not waste time. That the Government of India has made up its mind he may take it from their letter to be absolutely certain. In that conclusion the Local Government has finally concurred.

"For the reasons the Hon'ble Member in charge of the Bill has given, there will be no difficulty in completing the revision of the simple details that will be committed to them within a fortnight, and I trust the Council will accept the motion of the Hon'ble Mr. Baker. There are two matters to which the Hon'ble Mr. Baker has not referred, and about which I would like to say a few words to the Council. The first is, that it was with much reluctance that I was compelled to intervene and call to order two Hon'ble Members who addressed us this afternoon. One of the points on which the expression of views was about to be made was that of the allegation of corruption among the Municipal Commissioners of Calcutta. That is a matter on which the Corporation, I see, are about to address me, and upon which the Corporation will have an immediate reply from myself. It is unnecessary to go further into it now. It is not a matter to discuss here. The second matter is as to the character of the administration of Calcutta in the past. I also ruled that this was out of order and beyond discussion, for the reason that the Government of India had come to their conclusion upon that point and had confirmed the opinion of Sir Alexander Mackenzie. The other question to which I wish to refer is that which my hon'ble friend Babu Surendranath Banerjee mentioned at the end of his first speech. He said this was a measure which was a death-blow to the prospects of Local Self-Government in Calcutta. I venture to remind him and all the Members of this Council of what I said on this subject last November. I said then that Local Self-Government was confined to no single and solitary system. Local Self-Government may be carried out and carried forward in many different forms and fashions, and the man who should refuse to amend the system of Local Self-Government, which was not fulfilling

expectations, would be the most deadly enemy of the whole system of Local Self-Government. The friend of Local Self-Government is the man who accepts experience and makes modifications accordingly. Therefore, I must take the liberty to differ from my hon'ble friend, and I can assure him that, so far from this measure being a death-blow to Local Self-Government, it is the truest help that Local Self-Government can in fact receive. Whatever disappointment it may bring to one particular class, the result will be sustained success and improvement in the administration of Calcutta."

The Hon'ble BABU SURENDRANATH BANERJEE'S amendments being put to the vote, the Council divided :—

Ayes 6.	*Noes 11.*
The Hon'ble Babu Surendranath Banerjee.	The Hon'ble Mr. Mackenzie.
The Hon'ble Babu Boikanta Nath Sen.	The Hon'ble Mr. Spink.
The Hon'ble Dr. Asutosh Mukhopadhyaya.	The Hon'ble Mr. Slack.
The Hon'ble Mr. Apcar.	The Hon'ble Mr. Handley.
The Hon'ble Raja Ranajit Singha Bahadur, of Nashipur.	The Hon'ble Mr. Buckland.
	The Hon'ble Rai Durgagati Banerjea Bahadur.
The Hon'ble Babu Jatra Mohan Sen.	The Hon'ble Mr. Baker.
	The Hon'ble Mr. Bolton.
	The Hon'ble Mr. Buckley.
	The Hon'ble Mr. Oldham.
	The Hon'ble Nawab Bahadur Syud Ameer Hossein.

So the amendments were lost.

The Hon'ble Mr. Baker's motion was then put and carried.

The Council adjourned to Monday, the 21st August, 1899.

CALCUTTA;
The 29th August, 1899.

F. G. WIGLEY,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

RESOLUTION ON THE ANNUAL REPORT OF THE PORT OFFICER, CALCUTTA, FOR THE YEAR 1898-99.

No. 1636Marine.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

Dated Calcutta, the 29th August 1899.

RESOLUTION.

READ—

Letter No. 2660, dated 14th July 1899, from the Port Officer, Calcutta, submitting his Annual Report for 1898-99.

COMMANDER P. J. FALLE, R.I.M., took over control of the Port Officer's Department from Commander B. P. Creagh, R.I.M., on the forenoon of the 1st April 1898, and has presided over the Department throughout the year.

2. The strength of the Bengal Pilot Service, at the close of the year, stood at 50, showing a reduction of two, as compared with the previous year. This was caused by one Pilot having resigned, and one retired. There are three grades of Pilots, viz. Branch Pilots, Master Pilots, and Mate Pilots, and the number on the list is divided between these grades as follows:—

Branch Pilots	16
Master Pilots	25
Mate Pilots	9

of these seven Branch Pilots and one Master Pilot are licensed.

3. The number of Leadsmen increased from 9 on the 31st March 1898 to 11 at the close of the year. In the review of the previous year, it was stated that, owing to the large reduction from 13 to 9 of the staff of apprentices, arrangements had been made to obtain from England the services of five additional Leadsmen. During the year three apprentices were appointed in England, but as one apprentice resigned during the year the total increase in the number has been only two. Subsequent to the close of the year, two more apprentices were appointed from England, and the Secretary of State has been requested to send out another apprentice, who will arrive about the end of the current year. No local candidate applied to be examined in April 1899, and arrangements have been made to hold a special examination in November 1899 for the admission of a local candidate.

4. In 1893 it was decided to gradually reduce the strength of the Bengal Pilot Service, so as to give them more frequent employment, and thus make them more efficient. In 1895 the first step was made in this direction by reducing the number to 55, and now the strength has fallen to 50, which was the number contemplated in 1893.

The employment of the Pilots is shown in the following statement:—

	Average number at work throughout the year.		Average number of vessels piloted each month.	
	1898-99.	1897-98.	1898-99.	1897-98.
Branch Pilots ...	11·3	11·11	7·47	7·41
Senior Master Pilots ...	11·02	9·63	5·79	6·06
Junior Master Pilots ...	6·12	8·16	4·43	4·44
Mate Pilots ...	7·98	7·49	3·34	3·69

In the case of the Branch Pilots, the number of vessels piloted shows an increase, while in the grade of Junior Masters, the number of vessels piloted is practically the same.

In the remaining grades the number of vessels piloted shows a reduction, due in one case to the larger number at work, and in the other to a smaller number of vessels falling to the grade.

5. The following table shows the number of arrivals and departures of vessels during the past three years:—

	Year.	Arrivals.	Departures.	Average tonnage.
1	2	3	4	5
Steamers ...	1896-97 ...	939	924	3,002
	1897-98 ...	1,102	1,097	2,995
	1898-99 ...	1,102	1,116	3,116
Sailing vessels ...	1896-97 ...	118	114	1,580
	1897-98 ...	133	126	1,866
	1898-99 ...	105	107	1,757

This shows a further decrease in the number of sailing vessels visiting the port.

6. The following statement shows the number of vessels drawing over 21 feet piloted inwards and outwards during the last two years:—

	Year.	21-22.		22-23.		23-24.		24-25.		25-26.		26-27.		Total.	
		Inwards.	Outwards.	Inwards.	Outwards.	Inwards.	Outwards.	Inwards.	Outwards.	Inwards.	Outwards.	Inwards.	Outwards.	Inwards.	Outwards.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Steamers	1897-98 ...	59	96	55	118	79	187	48	149	7	59	1	3	249	612
	1898-99 ...	37	88	29	114	66	151	23	138	4	126	...	21	159	658
Sailing vessels	1897-98 ...	23	34	23	23	8	5	...	1	...	...	...	...	54	63
	1898-99 ...	25	25	18	25	7	7	2	1	...	...	...	...	53	58

Compared with the previous year, there has been a decrease in the number of steamers inwards and an increase in outwards, and a decrease in the number of sailing ships both inwards and outwards.

7. Only one vessel was neaped during the year. During 1896-97 45 vessels were detained, and in 1897-98 six vessels were detained for want of water, and the gradual reduction in these numbers appears to show that the several channels of the river have improved.

8. There were 27 groundings and 4 collisions during the year against 33 and 8 respectively, during the previous year. Of the groundings, 13 were either accidental or slight, 4 due to alteration of channel, and 2 in which the Pilots were not to blame. In the case of the collisions, one vessel, the S.S. *Mecca*, was totally lost, and in two others damage was caused. The percentage of casualties to vessels was 1·27 against 1·66 and 1·90 in the two previous years. This record is satisfactory.

9. Thirty three preliminary enquiries were held by the Port Officer during the year, of which 3 were referred to Departmental Courts of Enquiry. In two of these the Pilots were found guilty of negligence and want of proper care, and were suitably punished. In the third case, the Departmental Court found that the Pilot was not to blame. The Government, however, considered that the Pilot's action amounted to rash and negligent navigation, but as he had been acquitted of blame by the Court, no punishment was inflicted on him beyond the record of the opinion of Government.

10. Three special Marine Courts were also held during the year. In the first case, resulting in the loss of the S.S. *Mecca*, the Court was of opinion that the casualty was due to an error of judgment of the Master, who was drowned. The Court was further of opinion that the Chief Engineer of the S.S. *Lindula*,

the vessel against which the *Mecca* collided, was to blame for want of energy displayed by him in repairing the shaft of his vessel, and he was warned to keep his log in a more methodical manner. The Chief Engineer of the S.S. *Mecca* also was severely censured for gross negligence in omitting to close the watertight door of the engine room of the vessel. In the second case, the Court found the Tug Master guilty, and suspended his certificate as Master, and his license as steam-tug pilot, for three months, a local certificate of competency as Mate being granted him for that period. In the third case, which was one of grounding near Vizagapatam, the Court found the Master guilty, and his certificate was suspended for three months.

11. The Inland Steam Vessels Act was amended during the year to enable Local Governments to frame rules for the protection of inland vessels from collisions. Rules were accordingly framed and submitted to the Government of India, and are at present under consideration.

12. The S.S. *Guide* made 21 trips during the year. As explained in previous years, these trips are made chiefly in towing pilot brigs to and from their stations, and in supplying them with stores, water, and provisions.

13. The receipts and expenditure on account of pilotage for the last three years are shown below:—

	Receipts.	Expenditure.
	Rs.	Rs.
1896-97	8,55,724	7,44,392
1897-98	10,45,081	8,51,887
1898-99	10,33,642	8,23,655

14. The number of certificates of each class granted to Masters, Mates, Engineers and engine-drivers, after examination in Calcutta, is shown in the table below:—

Nature of certificate.	Candidates.	Total number examined.	Result.			Provisional certificate granted.	Renewal of certificate.	Remarks.
			Passed.	Failed.	Not eligible.

	Second-class ,, ...	58	24	34	.....	.....	.....	
		415	164	251	.....	.....	.....	

15. The duties of First Engineer and Shipwright Surveyor were conducted by Mr. G. Robertson throughout the year, with the exception of 27 days in September 1898, when he was on privilege leave. During this period Mr. E. G. Venn, the Second Surveyor, acted for him, and was assisted by Mr. T. W. Fish, Lloyd's Surveyor.

16. The gross receipts from fees, collected for surveys, amounted to Rs. 31,627, and the expenditure, including travelling allowances of Surveyor to out-stations, amounted to Rs. 27,110. In all 422 vessels were surveyed.

17. The Department was efficiently managed by Commander Falle during the year, and the thanks of the Lieutenant-Governor are due to the Port Officer.

By order of the Lieutenant-Governor of Bengal,

R. B. BUCKLEY,

Secretary to the Govt. of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FIRST QUARTER OF 1899-1900.

No. 638B., dated Calcutta, the 18th August 1899.

From—H. J. McIntosh, Esq., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

SALT.

THE HON'BLE MR. W. B. OLDHAM, C.I.E.

I AM directed to submit the following report on the state of the salt market for the first quarter of 1899-1900, comprising the months of April, May and June 1899.

2. The quantity of salt of every description cleared during the quarter amounted to 29,38,009 maunds, as compared with 25,63,412 maunds in the previous quarter and 27,56,417* maunds in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 69,58,672, as against Rs. 60,73,882 in the previous quarter and Rs. 65,28,353* in the corresponding quarter of the previous year.

* Revised figures.

3. The quantity of locally-made salt removed from the *golas* in Orissa during the quarter, and the quantity which remained in store at its close, are shown in table (I) below:—

TABLE I.

1	2
	Puri.
	Mds.
Balance at the close of the previous quarter ...	4,84,510
Manufactured or added during the quarter ...	.....
Total ...	4,84,510
Sold during the quarter	17,148
Wastage	2,853
Total ...	20,001
Balance at the close of the quarter	4,64,509

The total sales of locally-made salt during the quarter amounted to 17,148 maunds, as compared with 15,616 maunds in the previous quarter and 7,156 maunds in the corresponding quarter of the previous year. Duty was paid on the full quantity sold.

4. The subjoined table (II) shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter,

as compared with the figures of the corresponding quarters of the last two years:—

* Revised figure.

7. The quantity of salt despatched by the East Indian Railway to stations beyond Buxar during the quarter amounted to 5,621 maunds and 10 seers, as noted in the margin, against 2,613 maunds and 10 seers in the previous quarter, and 2,250 maunds and 20 seers in the corresponding quarter of the previous year.

	Mds.	s.
April	1,499	0
May	2,248	20
June	1,873	30
Total ...	5,621	10

8. The quantity of saltpetre removed from the refineries during the quarter on payment of duty amounted to 5,552 maunds, as compared with 6,850 maunds in the previous quarter, and 6,074 maunds in the corresponding quarter of the previous year.

9. The shipments of Liverpool salt for the port of Calcutta, according to the published market reports, were as follows:—

	Tons.
April 1899	15,400
May „	34,310
June „	11,540
Total ...	61,250

It is reported that three sailing vessels were *en route* for Calcutta at the close of the quarter with 7,700 tons of salt from Hamburg.

10. Table V shows the average wholesale price per 100 maunds of Liverpool and other descriptions of salt during each fortnight of the quarter:—

TABLE V.

DESCRIPTION OF SALT.	Fortnight ending 15th April 1899.	Fortnight ending 30th April 1899.	Fortnight ending 15th May 1899.	Fortnight ending 31st May 1899.	Fortnight ending 15th June 1899.	Fortnight ending 30th June 1899.

No transactions in sea-imported salt have been reported for the quarter from Cuttack and Puri.

WEATHER AND CROP REPORT.

For the week ending the 28th August 1899.

Burdwan.—Rainfall at Sadar 2·32, Kalna 2·81, Katwa 2·59, Raniganj 0·42. Weather seasonable. Transplantation of *aman* paddy completed. Standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa slightly increased. Common rice selling as follows:—

	Srs.	
Sadar	18	per rupee.
Kalna	14¾	
Katwa	15 11/16	
Raniganj	15½	

Birbhum.—Rainfall at Sadar ·51, Rampur Hât 1·10. Weather hot. More rain wanted. Rice sells at Sadar and Rampur Hât 15 seers per rupee. Fodder sufficient.

Bankura.—Rainfall at Bankura 0·88, Vishnupur 1·92. Weather hot with occasional light showers. More rain wanted. Weeding operations going on. Fodder and water sufficient. No cattle-disease reported. Rice is selling at Bankura 17½ seers and at Vishnupur 17 seers per rupee.

Midnapore.—Rainfall at Sadar 5·55, Contai 4·47, Tamluk 2·53, Ghatal 2·68. *Aus* paddy is being reaped. Prospects good. *Aman* paddy is being still transplanted. Prospects very good except in parts, which were inundated. Cattle-disease and grass-hoppers reported from some places in the Sadar subdivision. Common rice sells as follows:—

	Srs.	CH.	
Sadar	15	0	per rupee.
Contai	15	0	
Tamluk	14	3½	
Ghatal	18	0	

Hooghly.—Rainfall at Sadar ·69, Serampore 2·35. Transplantation of *aman* paddy continues. State of jute and sugarcane not favourable. Cattle-disease in Sadar subdivision. Common rice selling at 14 seers per rupee.

Howrah.—Rainfall at Sadar 0·57, Ulubaria 2·44. Weather hot and cloudy with occasional showers. Transplantation of *aman* still going on. Prospects hopeful. Condition of jute and sugarcane good. Harvesting of *aus* commenced. Fodder and water sufficient. Common rice sells at 13 seers 14½ chitacks per rupee.

24-Parganas.—Rainfall at Sadar 2·37, Barasat 3·34, Basirhat 1·23, Diamond Harbour 1·23. Weather hot and cloudy. Prospect of winter rice crop is fair everywhere, except in low lands in Basirhat and Diamond Harbour which are still under water. Prospect of *aus* and jute is not good in Diamond Harbour. Transplantation going on briskly. *Aus* being harvested. Cattle-disease reported in Basirhat. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	12 to 16	per rupee.
Barasat	15	
Basirhat	16	
Diamond Harbour	13	

Nadia.—Rainfall at Sadar ·58, Kushtia 1·40, Meherpur 2·79, Chuadanga 1·48, Ranaghat ·96. Weather seasonable. Harvesting of *aus* and steeping of jute going on. Prospects of standing crops good. Fodder and water sufficient. Common rice sells as follows:—

Sadar	15	per rupee.
Kushtia	16	
Meherpur	14-8	
Chuadanga	14-4	
Ranaghat	13	

Murshidabad.—Rainfall at Sadar 2·18, Jangipur 1·02, Kandi 0·62. Weather cloudy and hot. Harvesting of *bhadoi* and cutting of jute continue. Transplantation of *aman* finished. Mulberry doing well. Fodder insufficient, and cattle-pox appears in Daulatabad police-station. Water sufficient. Common rice sells at Sadar 14 seers, Jangipur 15 seers, and Kandi 17 seers per rupee.

Jessore.—Rainfall at Sadar 0·77, Jhenida 0·40, Magura 0·96, Narail 0·41, Bangaon 1·06. Weather seasonable, more or less cloudy with occasional light showers. Harvesting of *aus* paddy is going on. Prospect is good. Insects disappeared. Rivers are rising. No cattle-disease reported. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	Ch.	
Sadar	16	8	per rupee.
Jhenida	16	0	
Magura	18	12	
Narail	15	0	
Bangaon	17	0	

Khulna.—Rainfall at Sadar 1·08, Bagirhat 2·25, Satkhira 2·31. Weather hot with occasional rain. Transplantation of *aman* and harvesting of *aus* going on. Fodder and water sufficient. Insects have disappeared. Common rice sells as follows:—

	Srs.	
Sadar	16½	per rupee.
Bagirhat	16½	
Satkhira	14	

Rajshahi.—Rainfall at Sadar 1·62, Nator 1·04, Naugaon 2·7. Prospects of crops fair. Harvesting of *aus*, steeping of jute, and transplantation of *aman* going on. No cattle-disease. Fodder and water plentiful. Common rice sells at 17½ seers per rupee.

Dinajpur.—Average rainfall 2·30. Weather seasonabe. Standing crops good. No cattle-disease. Fodder and water sufficient. Rice selling at 17 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 2·30, Alipur Duars ·80. Weather hot and cloudy. Transplantation of *haimanti* paddy and steeping of jute progressing. *Bhadoi* paddy still being harvested. Fodder and water ample. Common rice sells at 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 6·64, Siliguri 7·45. Weather seasonable. *Hills*—*Kalai* and *phaphar* being sown; *Bhutta* being reaped; *bhadoi*, *haimanti dhan*, *chota* and *barc marua* doing well. *Terai*—Jute and *bhadoi* being cut; *haimanti* paddy being transplanted; sugarcane doing well. Coarse rice sells as follows:—

	Srs.	
Hills	10	per rupee.
Terai	16	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 1·43, Gaibanda 1·86, Kurigram 0·29, Nilphamari 0·56. Weather seasonable. Health of cattle good. Fodder and water sufficient. Transplantation of winter rice and steeping of jute going on. Common rice selling at 17 seers 1 chitak per rupee.

Bogra.—Average rainfall 3·03. *Aus* being harvested. Cutting of jute and transplantation of *aman* still going on. Prospects good. Fodder and water ample. Common rice sells at 17 seers per rupee.

Pabna.—Rainfall at Sadar 0·60, Sirajganj 1·08. Weather cloudy and hot. Prospects of crops good. Common rice sells at 15 seers 11 chitaks per rupee.

Dacca.—Rainfall at Sadar 1·09, Manikganj ·08, Munshiganj 1·42, Narainganj ·97. Weather seasonable. Prospects of standing crops good. Fodder available. No cattle-disease. Common rice 17 seers per rupee.

Mymensingh.—Rainfall at Sadar 4·34, Kishorganj 2·38, Jamalpur 3·03, Netrokona 4·87, Tangail 5·71. Weather seasonable. Prospects of standing crops good. Common rice sells as follows:—

	Srs.	
Sadar	20	per rupee.
Jamalpur	17½	
Tangail	17½	
Kishorganj	19	
Netrokona	24-4	

Faridpur.—Rainfall at Sadar 1·39, Goalundo 0·71. Weather seasonable. State and prospects of crops generally fair. Common rice sells at 16½ seers per rupee.

Backergunge.—Rainfall at Sadar 0·72. Weather seasonable. Prospects of crops fair, but *pamari* insects in places. Common rice sells at 15 seers (*aman*) and 18 seers (*aus*) per rupee.

Tippera.—Rainfall at Sadar 1·24, Brahmanberiah ·86, Chandpur 1·29. Weather seasonable. Jute cutting in progress. Prospects of *aman* continue favourable. Average price of common rice 18 seers per rupee.

Noakhali.—Rainfall at Sadar 4·30, Feni 3·01. Prospects of crops fair. Transplantation of *aman* and harvesting of *aus* continue. Cattle-disease reported from Chagalnaya. Water sufficient. Fodder-supply less good than usual. Common rice—*aman* 16 seers and *aus* 19 seers per rupee.

Chittagong.—Rainfall 0·92. Weather seasonable. Reaping of *aus* continues. Transplantation of *aman* progressing. Prospects good. Common rice 15 seers per rupee. Water and fodder sufficient.

Patna.—Rainfall at Sadar 2·47, Barh 1·12, Bikram 1·68, Dinapore 4·58, Hilsa 1·60. Weeding of *bhadoi* crops going on in some places. Transplantation of paddy still continues. Condition of cattle fair. Green fodder and water-supply for cattle plentiful. Common rice in Patna sells at 14 seers per rupee.

Gaya.—Rainfall at Sadar 2·72, Jahanabad 2·07, Aurangabad 2·43, Nawada 0·63. Transplantation of paddy going on. Common rice selling at 13 seers per rupee.

Shahabad.—Rainfall at Sadar 1·51, Buxar 2·45, Bhabua 2·53, Sasaram 5·22. Transplantation of paddy progressing. Fodder and water abundant.

Saran.—Rainfall at Sadar 2·26, Siwan 8·28, Gopalganj 7·54. Weather sultry. Transplantation of paddy continues. Prospects of *bhadoi* bad. Rain has much injured prospects of paddy. Average price of common rice 13·8 seers and of *makai* 18·10 seers per rupee.

Champaran.—Rainfall at Motihari 2·52, Bettiah 5·39, Barharwa 7·74, Bagaha 3·17, Ramnagar 2·62. Prospect of *bhadoi* crop not good. Transplantation of *aghani* paddy progressing. *Makai* ripening. *Kodo* and *sawan* millets and early paddy being harvested. Common rice sells at 13½ seers per rupee.

Muzaffarpur.—Rainfall at Sadar 8·55, Hajipur 2·43, Sitamarhi 1·96. Transplantation of rice still continues. Prices are—Common rice 11½ seers, wheat 15 seers, barley 20 seers, *makai* 18 seers, gram 19 seers, *rahar* 19 seers per rupee.

Darbhanga.—Rainfall at Sadar 4·76, Samastipur 9·43, Madhubani 1·61. Weather hot with occasional showers. Transplantation of paddy is still in progress. Weeding of *bhadoi* crops going on. Fodder and water sufficient. Sporadic cases of cattle-disease reported from the Sadar subdivision. Common rice sell as follows:—

	Srs.	Ch.	
Sadar	12	0	per rupee.
Samastipur	13	0	
Madhubani	11	3	

Monghyr.—Rainfall at Monghyr 1·66, Begusarai 2·71, Jamui 5·06. Weather hot with occasional showers. Transplantation of winter rice going on. Prospects of *bhadoi* crops not favourable. Sowing of *mirchoi* going on. Common rice sells as follows:—

	Srs.	Ch.	
Monghyr	12	5	per rupee.
Begusarai	11	0	
Jamui	12	0	

Bhagalpur.—Weather wet and cloudy with rain at intervals. Rainfall at Sadar 4·65, Banka 1·83, Madhipura 4·89, Supaul 4·29. *Bhadoi* being reaped, outturn poor. Transplantation of *aghani* paddy almost over. Prospects favourable. Stray cases of cattle-disease reported. Prices stationary.

Purnea.—Rainfall at Sadar 3·07, Kishanganj 3·85, Araria 3·30. Weather seasonable. *Bhadoi* paddy being harvested. Jute being steeped and *aghani* being transplanted. Prospects good. Cattle-disease, called *dhodhopa*, prevails in thana Kaliaganj. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	14	per rupee.
Kishanganj	15	
Araria	16	

Malda.—Rainfall at Sadar 1·13, Chanchal 2·50, Shibganj ·12, Gajol 5·21. Weather very hot with occasional showers of rain. Harvesting of *bhadoi* paddy going on. Prospects of winter rice good. Price of coarse rice (*bhadoi*) 17 seers per rupee. Fodder and water sufficient.

Santhal Parganas.—Weather clear and hot. Prospects of paddy good. Indian-corn poor. Cattle-disease reported from Godda. Fodder and water sufficient. Average price of common rice 13 seers 9 chitaks and of Indian-corn 17 seers 8 chitaks per rupee.

Cuttack.—Rainfall at Sadar 1·83, Jajpur 1·68, Kendrapara 2·38, Banki 4·15. Weather seasonable. *Sarad*, jute, *haldia* cotton, and sugarcane are growing. *Beali* being harvested in places. *Sarad* being damaged by insects in places. Rain not sufficient. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

		S.	ch.	
Cuttack		15	12	per rupee.
Jajpur		17	1	
Kendrapara		19	11	
Banki		15	12	

Balasore.—Rainfall at Sadar 3·22. Weather hot. Weeding, puddling and transplanting of *sarad* continue. *Beali* is being reaped at places. Sugarcane thriving well. Rice sells at 18½ seers per rupee in the interior, and at 17 and 18 seers per rupee at Balasore and Bhadrak respectively. Cattle-disease reported from places. Fodder and water sufficient. Prospects of winter rice crop good.

Angul.—Rainfall at Sadar 2·53, and at Bisipara ·1. A few light showers. In some places transplantation and second ploughing, which were suspended, recommenced. In some places highland winter paddy, which was growing yellow for want of rain, is now improving. Unfavourable reports received from the interior. More rain urgently needed to complete agricultural operations. *Aus* paddy withering in some places. If there be sufficient rain within 10 days, prospects of crops will not be bad. The Subdivisional Officer, Khondmals, reports the same as in last week. Rice sells at Angul 22 seers and at Bisipara 12 seers per rupee.

Puri.—Rainfall at Sadar 3·47, Khurda 4·52. *Beali* and *mandia* being cut in places. *Sarad* being weeded and transplanted. Insect pests, locally called *jhintika*, have appeared in some parts. More rain wanted in several places. Sugarcane and other miscellaneous crops doing well. Fodder sufficient. Common rice sells as follows:—

	S.	ch.	
Sadar	17	11	per rupee.
Khurda	15	12	
Interior of the district	15	12	

Hazaribagh.—Rainfall at Sadar 2·61, Giridih 1·33. Weather rainy. Transplantation nearly finished. Common rice sells at 14 seers per rupee.

Ranchi.—Rainfall 2·09. Weather seasonable. Transplantation still continues. *Gondli* is being harvested. Prices stationary. No cattle-disease. Fodder and water plentiful.

Palamau.—Rainfall 2·20. Weather seasonable. Standing crops generally doing well. No cattle-disease. Rice sells at 15 seers per rupee.

Manbhum.—Rainfall at Sadar 4·52, Gobindpur ·29. Weather seasonable. Prospects of crops on ground generally good. Cattle-disease reported from thanas Tundi, Nirsha, and Topchanchi. Fodder and water sufficient. Average price of common rice at Sadar 15 seers 6 chitacks and at Gobindpur 14 seers per rupee. Supply sufficient.

Singhbhum.—Rainfall 3·03. More rain is wanted. Common rice sells at 16 seers 6 chitacks per rupee.

General Summary.—Rainfall during the week has been general, but moderate. The reports from Chota Nagpur are better. The winter rice crop is generally doing well, but in Orissa more rain is still wanted; and conditions in Angul, though somewhat improved, are still threatening. The harvesting of early rice and jute crops is going on. The price of common rice shows no important change during the week. Fodder is generally sufficient, and cattle are for the most part in good condition.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

REVENUE DEPARTMENT,
The 29th August 1899.

1.

IMPORTS INTO CALCUTTA.

The total fall from 1st January to 26th August 1899		58·33
The average fall of the corresponding period for 24 years, Surveyor-General's Office		46·79

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the New Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning; lr, lightning reflection; g, gloomy.

(a) The increase is in outward traffic, chiefly from stations in A and B districts, owing to movements of pilgrims and marriage parties.
(b) Deducted Rs. 30,428, being the estimated amount of rebate on coal for the week.
(b) The increase is due to a writeback of about Rs. 26,000 on account of wheat, coal, and demurrage, from the earnings of the corresponding period of 1898, and to a greater despatch of food-grains chiefly from stations on loop district in 1899.
(c) Payments on account of mileage and demurrage being more than the receipts, nothing is included.
(d) Includes amount of rebate on coal, Rs. 24,476 0 0
(c) " " of mileage and demurrage " 5,134 12 0

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled under the provisions of the Indian Councils Acts, 1861 and 1892.

THE Council met at the Council Chamber on Monday, the 21st August, 1899.

Present:

The Hon'ble SIR JOHN WOODBURN, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*
The Hon'ble MR. W. B. OLDHAM, C.I.E.
The Hon'ble MR. R. B. BUCKLEY.
The Hon'ble MR. C. W. BOLTON, C.S.I.
The Hon'ble MR. E. N. BAKER.
The Hon'ble RAI DURGA GATI BANERJEA BAHADUR, C.I.E.
The Hon'ble MR. C. E. BUCKLAND, C.I.E.
The Hon'ble MR. F. F. HANDLEY.
The Hon'ble MR. F. A. SLACK.
The Hon'ble KHAN BAHADUR MAULVI DELAWAR HOSSEIN AHMED.
The Hon'ble BABU JATRA MOHAN SEN.
The Hon'ble MR. T. W. SPINK.
The Hon'ble RAJA SHASHI SHAKHARESWAR ROY BAHADUR, OF TAHIRPUR.
The Hon'ble RAJA RANAJIT SINHA BAHADUR, OF NASHIPUR.
The Hon'ble SAHIBZADA MAHOMED BAKHTYAR SHAH, C.I.E.
The Hon'ble MR. D. F. MACKENZIE.
The Hon'ble DR. ASUTOSH MUKHOPADHYAYA, M.A., D.L., F.R.A.S., F.R.S.E.
The Hon'ble BABU BOIKANTA NATH SEN.
The Hon'ble BABU SURENDRANATH BANERJEE.

NEW MEMBER.

The Hon'ble KHAN BAHADUR MAULVI DELAWAR HOSSEIN AHMED took his seat in Council.

RIOTING IN THE KHULNA DISTRICT.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Is it the case that in the Annual Administration Report of the Presidency Division it is shewn that the Khulna district has returned the largest figure in the Province in rioting cases? If so, will the Government be pleased to state the causes to which this large number of rioting cases may be traced? Is it in any way connected with the inefficiency of the police? Will the Government be pleased to state what action it proposes to take in the matter?

The Hon'ble MR. BOLTON replied:—

"The Hon'ble Member has not mentioned the year of the Annual Administration Report of the Presidency Division to which he alludes. In 1897 160 cases of rioting were reported in Khulna. They arose mainly out of disputes relating to land. Contests for the possession of land were more numerous in consequence of a good harvest, following a season of scarcity. In the large reclaimed tracts, or *abads*, moreover, the boundaries are unsettled, and the lessees and their tenants are constantly quarrelling with one another. The Magistrate took special measures to check the increase of these cases by liberally rewarding the chaukidars for giving prompt information of apprehended riots, and binding down parties under sections 106 and 107 of the Code of Criminal Procedure. Proceedings were also taken to decide cases of disputed possession under section 145 of the Code; and special police were deputed to the more important *abads*. The returns for 1898 show that the number of riots fell to 110 in that year; and in the first-half of the present year only 23 cases, one alone being serious and ending in loss of life, were reported. The measures taken by the Magistrate are sufficient, and they have been successful."

THE CALCUTTA MUNICIPAL BILL.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Will the Government be pleased to lay on the table a copy of the letter of this Government addressed to the Government of India, No. 3837M, dated the 17th June, 1897, referred to by the Government of India in their letter No. 93, dated the 17th June last, containing the following principal grounds for the introduction of the Calcutta Municipal Bill:—

(1) the complete failure of the elective system to secure adequate representation even of the different interests existing in the native city;

(2) the practical exclusion of European men of business from all share in the municipal government of Calcutta;

(3) the growth of party spirit and the appearance among the elected Commissioners of a class of professional and in some cases corrupt politicians;

(4) the abuse of the Committee system, which paralyzed the Executive officers and demoralized the subordinate staff; and

(5) the consequent breakdown of the conservancy and water-supply of the town and every department of municipal administration.

The Hon'ble MR. BAKER replied:—

"The letter referred to in the Question is confidential, and cannot be published."

CHARGE AGAINST MUKUNDA SUNDER SIRKAR, OF JANGIPUR.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Has the attention of the Government been called to the case of one Mukunda Sunder Sirkar, of Jangipur, in the district of Murshidabad? Is it the case (1) that Mukunda Sunder Sirkar was arrested on a charge of delivering a counterfeit coin knowing it to be counterfeit, under section 241, Indian Penal Code, although his name did not appear in the first information, and the police reported there was no evidence against him; (2) that after arrest he was thrown into *hajat*; (3) that he was subsequently discharged, the trying Magistrate remarking that the witnesses who had given evidence against him had perjured themselves?

Is it the case that the gentleman against whom these proceedings were taken occupied the responsible position of Chairman of the Local Board? If so, will the Government please state what notice the Government has taken of these proceedings?

The Hon'ble MR. BOLTON replied:—

"The Government has seen the case mentioned by the Hon'ble Member, which was decided so far back as the 14th September, 1898, or nearly twelve months ago."

ENCOURAGEMENT OF BENGALI LITERATURE.

The Hon'ble RAJA SHASHISHAKHARESWAR ROY BAHADUR, OF TAHIRPUR, said—

With reference to the principle contained in the English Enactment 53, George III, section 43, for the encouragement of the vernacular literature of this country, a portion of which I beg to quote on the margin for easy reference, will the Government be pleased to state if any amount has of late been spent in Bengal for the improvement of Bengali literature or to give encouragement to Bengali authors in the shape of rewards or honoraria?

"That it shall be lawful for the Governor General in Council to direct that out of any surplus which may remain of the rents, revenues and profits arising from the said territorial acquisitions, after defraying the expenses of the Military, Civil and Commercial establishments, and paying the interest of the debt in manner hereinafter provided, a sum of not less than one lakh of rupees in each year shall be set apart and applied in the revival and improvement of literature and the encouragement of the learned natives of India, and for the introduction and promotion of a knowledge of the sciences among the inhabitants of the British territories in India."

The Hon'ble MR. SLACK replied:—

"The Hon'ble Member is referred to paragraph 32 of the Report of the Indian Education Commission, of which for his convenience a copy is laid upon the table. From this it will be seen that after discussion the whole sum of one lakh was given for the encouragement and promotion of education in the country, and since then has been continuously increased."

RECOGNITION OF MERITS OF BENGALI AUTHORS.

The Hon'ble RAJA SHASHISHAKHARESWAR ROY BAHADUR, OF TAHIRPUR, said—

Will the Government be pleased to take into its consideration, with a view to encourage the growth of a healthy tone in Bengali literary works, the desirability of recognizing the merits of Bengali authors by bestowing suitable titles of distinction upon such of the eminent authors as deserve it, and by occasionally helping them pecuniarily in their efforts to bring out books of original research and of public usefulness?

The Hon'ble MR. SLACK replied:—

"Government is always willing, on due cause being shown to their satisfaction, to recognize in the modes suggested by the Hon'ble Member the literary merits of Bengali authors. The Hon'ble Member is doubtless aware of the honours conferred on Raja Rajendra Lala Mitra, C.I.E., and Rai Kali Prasanna Ghosh, Bahadur, and of the pecuniary aid given to Babu Pratap Chandra Roy, C.I.E., in the translation of the Mahabharata."

VILLAGE COMMUNICATIONS.

The Hon'ble RAJA RANAJIT SINHA BAHADUR, OF NASHIPUR, asked—

Having regard to the facts that there are many villages in the interior of the districts where there are no proper roads for communication from one village to another, and that the people are much inconvenienced for want of the same, especially in the rainy season, will the Government be pleased to direct the several District Boards of Bengal to give more attention to the village roads in their respective districts and to place a certain amount of their income every year in the hands of the Local Boards, to be utilized for that purpose only?

The Hon'ble MR. BAKER replied:—

"I lay on the table a statement showing the expenditure incurred on village roads in each Division during each of the six years ending 1897-98.

"If the Hon'ble Member will refer to the Resolutions recorded on the working of District Boards, which are published annually, he will see that the improvement of village roads has received the watchful attention of Government for many years past: the Lieutenant-Governor has no reason to doubt that these roads have received their fair share of the funds at the disposal of the District Boards."

Statement showing the expenditure incurred by the several District Boards in Bengal during the six years ending 1897-98.

CALCUTTA MUNICIPAL BILL.

The Hon'ble Mr. Baker presented the further Report of the Select Committee on the Calcutta Municipal Bill together with two notes of dissent.

CIVIL COURTS AMINS' BILL.

The Hon'ble Mr. Bolton moved for leave to introduce a Bill to repeal the Civil Courts Amins' Act, 1856, in Bengal. He said:—

"With Your Honour's permission I will offer some remarks on the measure at this stage.

"In the course of the discussion of the last Financial Statement I stated, in reply to Raja Bahadur Ranajit Singha, that the Government intended to submit this Bill to the Council. Messrs. Toynbee and Stevens, who were deputed some years back to report on the strength and pay of the ministerial establishments of the Civil Courts in this Province, brought to notice the very unsatisfactory working of the system of Civil Court Amins, and recommended its abolition. Their view was accepted by the Government, and eventually by the High Court, and it will, I think, be generally admitted that a change in the present system is desirable. The Act of 1856 provides for the appointment of paid Amins in the districts for the carrying out of local enquiries required by the Civil Courts and for other specified duties, and the difficulty of finding a suitable non-official agency for such duties in those days doubtless rendered the provision necessary. Every district, however, now possesses a large Bar, from the junior members of which competent persons could be selected to act as Commissioners for local investigations ordered by the Civil Courts under section 392 of the Code of Civil Procedure, and other qualified persons are also available. A certificate of qualification in surveying will be needed in the case of enquiries involving surveys, but those who desire employment of this kind will have facilities for acquiring a knowledge of surveying in the survey schools which exist in all parts of the Province. The retention of the present system is, therefore, no longer necessary, and the Bill proposes its abolition by repealing the Act of 1856, so far as it applies to Bengal. The abolition can, however, only be effected gradually. The appointment and remuneration of the existing Amins must be saved, but it will no longer be compulsory to fill vacancies, and gradual reductions will thus take place until the staff disappears. The new system will probably be confined in the first instance to the more advanced districts, in which it may be expected that a sufficient number of independent persons competent to execute commissions will be forthcoming.

"The Bill consists of a single section, which repeals the Act, saves the appointments of the existing Amins, and provides for their employment on such duties as may be required of them by the District Judge. It will, I presume, meet with no opposition, and its reference to a Select Committee appears unnecessary."

The Motion was put and agreed to.

ADJOURNMENT OF COUNCIL.

The Hon'ble THE PRESIDENT said:—"I had been my intention to adjourn the Council till Saturday the 2nd proximo, but I have been moved by two of the Hon'ble Members to postpone the next meeting till the 9th of September. They represent that they will not be ready before that date with the amendments of the Municipal Bill, which they wish to bring forward. I cannot admit that the time given for the preparation of these amendments has been inadequate. The Bill is not a new one. It was under the patient consideration of a Select Committee of this Council for five months. The report of that Committee has been before the Council now for nearly four months, and the hon'ble gentleman, who represents the Corporation, succeeds to the careful labours of his predecessor, and the Select Committee of which his

predecessor was a member. I cannot, therefore, admit that the Hon'ble Members who have moved me in this matter have a sound claim for the postponement for which they ask. I understand, indeed, from my hon'ble colleague, Babu Surendranath Banerjee, that he does not justify their unreadiness, but appeals to our consideration on the simple ground of fact that they will not be ready. I yeild with reluctance, for a postponement will be of inconvenience to many other Members of the Council, but I am desirous of meeting the wishes of the Hon'ble Members as far as is possible, and I assent to the adjournment of the Council till Saturday, the 9th September."

The Council adjourned to Saturday, the 9th September, 1899.

CALCUTTA;
The 5th September, 1899.

F. G. WIGLEY,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

RESOLUTION ON THE REPORT OF THE BOARD OF REVENUE ON THE ADMINISTRATION OF THE SALT DEPARTMENT FOR THE YEAR 1898-99.

FINANCIAL DEPARTMENT.—SEPARATE REVENUE.

Calcutta, the 1st September 1899.

RESOLUTION—No. 50293.R.

READ—

The report of the Board of Revenue on the Administration of the Salt Department for the year 1898-99.

THE principal administrative feature of the year 1898 99 has been the preparation of a scheme for the better administration of the Salt Department in Bengal and the formation of an administrative and preventive staff for the suppression of the illicit manufacture of salt in the maritime districts in Bengal outside Orissa. The Secretary of State, in according sanction to the scheme, expressed his concurrence with the views of the Government of India that it would be necessary to give better pay and prospects than the Government of Bengal contemplated. Revised proposals based on this suggestion have been submitted to the Government of India. Owing to the receipt of this sanction very late in the year, it was not considered feasible to give effect to that part of the scheme which contemplated the working of the Salt Department in Orissa through District Officers. During the year orders were issued under section 6 of the Indian Salt Act, XII of 1882, absolutely prohibiting the manufacture of salt in the district of the 24-Parganas (except Calcutta), Midnapore, Khulna, Backergunge, and Chittagong, so as to enable the Salt officers employed in these tracts to send up cases of illicit dealings in salt, including the excavation or removal of natural saline deposits or efflorescence, under the law as it now stands. A Bill to amend the Bengal Salt Act, VII of 1864, was introduced during the year into the Bengal Legislative Council. The establishment of private bonded salt warehouses at places other than customs ports continues to gain in favour. An additional inland private warehouse was licensed by Messrs. Turner, Morrison and Company at Purulia and two others by native bonders at Narayanganj and Bhairab Bazar. On this point the Board observe:—"There are at present 17 such warehouses in the Province, and there was a considerable development in the trade in these warehouses during the past year, the quantity of salt despatched thereto from ship-board and from bond in Calcutta amounting to 8,86,627 maunds as compared with 6,95,355 maunds in 1897-98, or to an increase of 1,91,272 maunds."

2. The following statement shows the receipts and charges of the Salt Department, including those connected with imported salt during each of the last six years:—

* Revised figures as given in the Accountant-General's final accounts.
† Includes the charges incurred for the salt operations in the 24-Parganas under Act XII of 1882.
NOTE.—The figures for 1898-99 are subject to revision, as the Accountant-General's final figures for the year are not yet available.

3. When compared with the statistics of 1897-98, the figures of the year under review show an increase of Rs. 4,90,007 or 1·9 per cent. in the receipts and of Rs. 58,449 or 16·2 per cent. in the charges. The net revenue, therefore, rose by Rs. 4,31,558 or 1·7 per cent. as compared with the previous year, and stood higher than in any of the preceding 10 years, except in 1896-97. The advance of Rs. 3,34,466 in import duty is attributed by the Board to the increased clearances of salt during the year. The revenue from excise salt also shows a material improvement of Rs. 1,16,770 owing to the increased sales of this salt in the district of Puri, stimulated by the reduction in its wholesale price. There was also a considerable increase in the proceeds from rent of warehouses on account of the larger stocks of salt in bond during the year. The increase in the charges was mostly under the head of "Refunds of customs duty on salt," and the Board of Revenue attribute this increase to the usual variations due to the greater or less miscalculation of salt on boardship.

The Salt trade.

4. The following statement shows the fluctuations in the volume of the salt trade in Bengal during the last 3 years, excluding salt imported by land from Ganjam and the Upper Provinces on which duty is not paid in Bengal:—

Clearances ...	Sea imported salt for ship-board.	44,92,526	52,16,628	42,94,072
	Sea imported salt from bond	59,38,463	51,02,643	60,66,480
	Excise salt from bond ...	46,224	17,047	63,755
	Total ...	1,04,77,213	1,05,36,318	1,04,24,307
Closing stock ...	Sea imported salt in bond	10,61,713	28,86.733	27,78,268
	Excise salt in bond ...	4,13,589	5,58,893	4,84,510
	Total ...	14,75,302	34,45,626	32,62,778

The stock of salt in the golas, which at the commencement of the year stood at nearly 34½ lakhs of maunds, fell at the close of the year to 32⅔ lakhs of maunds. The quantity of salt lying afloat in the port of Calcutta, ready to be sold direct to purchasers, which at the end of the preceding year amounted to 2,31,956 maunds dropped, during the year 1898-99, to 2,23,534 maunds.

Imports.

5. In Bengal salt is imported by sea direct into the ports of Calcutta and Chittagong only. The combined imports into these two ports show a net decrease of 18,71,402 maunds compared with those of the previous year, the decrease having occurred in both the ports. The decline in the total imports both into Calcutta and Chittagong is attributed by the Collector of Customs to the abnormally high imports of the preceding year and the consequent heavy stocks in bond at its close. The following statement shows the different countries and ports from which shipments of salt were made during the last three years :—

	1896-97.	1897-98.	1898-99.	Percentage of quantity imported for each group in 1896-97.	Percentage of quantity imported for each group in 1897-98.	Percentage of quantity imported for each group in 1898-99.

There was no importation of salt during the past two years from the Egyptian and other non-European ports beyond the Suez Canal (group III), while, with the exception of Madagascar and other States on the east coast of Africa, Ras Rawayah and Linga, all the foreign countries sent out smaller quantities of salt this year. On this point the Board write:—"The falling off in salt from the Asiatic ports was, it is stated, due to the low prices offering for these salts in the market, and that in the importation from Germany to want of freight and to low prices." The imports of Madras salt decreased by 8·2 per cent., while those of Bombay were nearly the same as in 1897-98.

From a statement furnished in the report showing the clearances of Liverpool, Hamburg and crushed salts during the past five years, it is seen that consumption of Liverpool salt has increased at the expense of Hamburg and crushed salts. The importations of Hamburg salt were small and no stocks were left in the golas, while the decrease in the clearance of crushed salt was due to a fall in the price of Liverpool salt, which checked competition by the former. A large and regular supply of Liverpool salt is now sent out in liner steamers and the market has been kept supplied at a lower rate than in former years.

Clearances of salt.

6. Excluding 98,197 maunds of Madras and Bombay salt cleared free of duty in Calcutta, duty was paid on 41,95,875 maunds cleared from ship-board against 52,02,818 maunds in the previous year, while the clearances from bond rose from 45,15,621 maunds to 56,22,188 maunds. On the whole, the total clearances of all kinds including those of Bombay and Madras salts and of excise salt, rose from 1,03,36,318 maunds to 1,04,24,307 maunds.

Consumption of salt.

7. Deducting from the above clearances, the excess of exports from Bengal by land and river over the imports by the same routes, amounting to 6,09,671 maunds, and adding 18,692 maunds of saltpetre brought into use, the balance of salt left for consumption rose from 97,39,835 maunds in 1897-98 to 98,33,328 maunds in 1898-99. The rate of consumption per head was 4 seers and 15 chitaks against 5 seers in 1897-98. In the saliferous districts, excluding Orissa, the consumption of licit salt increased by 31,534 maunds, and the average consumption rose from 4 seers 12 chitaks to 4 seers and 14 chitaks which was the rate in

1896-97. Compared with the figures for the previous year, the consumption increased in all the saliferous districts except Midnapore and Chittagong. This satisfactory increase in the net result is attributed by the Board of Revenue to the improved condition of the people owing to the good harvests of the year, but in a far greater degree to the activity of the special establishment employed in the 24-Parganas to check illicit manufacture of salt. The lowest rate prevailed during the year in Chittagong where the consumption fell from 4 seers 11 chitaks to 4 seers 1 chitak. The falling off is attributed by the Collector of the district to the impoverished condition of the people owing to scarcity which prevailed during the preceding two years and to the cyclone and storm-wave of October 1897, from the effects of which the people have not yet been able to recover. In the 24-Parganas and Khulna, the rate of consumption of licit salt rose from 4 seers and 4 seers 12 chitaks to 4 seers 10 chitaks and 5 seers 3 chitaks respectively, while in Midnapore the figure fell from 4 seers 14 chitaks to 4 seers 12 chitaks. In Orissa the consumption per head rose from 4 seers 14 chitaks in 1897-98 to 5 seers and 7 chitaks in 1898-99.

7. The price of salt was generally lower than in the previous year. The average wholesale price (exclusive of duty) of 100 maunds of Liverpool salt, purchased from the ships side in the port of Calcutta, fell from Rs. 80-4-3 to Rs. 66-11-4, while the selling price, exclusive of duty) which in 1897-98 had varied from Rs. 97-12 to Rs. 63-1-1 ranged during the past year between Rs. 73-0-8 and Rs. 61. This falling off is attributable to the fact, remarked in paragraph 5 above, that a large and regular supply of this salt is now sent out in liner steamers and the market has been kept supplied at a lower rate than in former years. The average wholesale price, inclusive of duty, at the 12 chief marts of Bengal fell from Rs. 3-12-8 to Rs. 3-10-9. The corresponding average based on the wholesale prices of all the districts in Bengal also fell from Rs. 3-14-11 to Rs. 3-13-1 per maund.

Inter-provincial trade.

8. The total imports from Madras, the Upper Provinces and Assam of duty-paid salt rose from 6,09,213 maunds to 6,34,008 maunds during the year, the increase being due mainly to larger importations from Madras. The exports from Bengal to the North-Western Provinces and Oudh, the Punjab and Central Provinces rose by 52,401 maunds, against a decrease of 48,115 maunds in the exports to Assam, Rajputana and Central India, and Nipal, Sikkim, Tibet and Bhutan. The net result was an excess of exports over import of 6,09,671 maunds against an excess of 6,30,180 maunds in 1897-98.

Working of the salt laws and rules.

9. The number of cases in which contraband salt was attached, including cases that occurred in the Orissa district, rose from 1,032 to 1,096 during the past year, but the quantity of salt confiscated fell from 747 maunds to 510 maunds, thus showing a decrease of 31·7 per cent. On an average 24¼ seers of salt were attached and 20¾ confiscated in each case as against 31½ seers and 28½ seers, respectively, in the previous year. The quantity confiscated was largest in the 24 Parganas (276 maunds) followed by Chittagong (130½ maunds). In Midnapore the number of cases in which salt was attached and confiscated decreased by 48·8 and 47·5 per cent. with a corresponding diminution in the quantities of salt attached and confiscated of 97·4 per cent., and 26·1 per cent., respectively, as compared with the previous year. In Orissa the number of cases in which salt was confiscated fell from 569 to 231, and the quantity of salt confiscated from 538 to 73 maunds only. The total number of cases instituted in the Courts throughout Bengal was 966 as against 904 in 1897-98. The number of cases instituted in the 24-Parganas rose from 178 in 1897-98 to 409 during the year. Out of these 409 cases, 353 involving as many persons, were sent up by the Salt Preventive officers for trial for illicit manufacture of salt under the Indian Salt Act, XII of 1882, and 2 cases, affecting three persons, for transporting large quantities of salt unprotected by rowanas. Cases against four persons had to be withdrawn owing to a technical defect, and conviction was obtained in the case of 249 persons out of 252 actually tried. The result is undoubtedly satisfactory. In Midnapore, the number of cases instituted fell from 63 to 32, the decrease being confined to offences for illicit manufacture and for illicit possession or transport. The decrease in the first kind of offence is attributed to the ruling of the Sessions Judge that a police officer employed as a salt officer has not the power of search under section 28 of Act VII

(B.C.) of 1864, unless he is also an officer in charge of a police-station. The large decrease of 194 cases in Orissa is attributed by the Board to a decline in crime "due, among other causes, to the splendid harvest since the close of 1897-98 and the vast field for labour thrown open by the works of construction of the railway lines, which were in full swing throughout the dry months of the year." The cases sent up for trial for manufacture of contraband salt in the Orissa districts numbered 150 against 366 in the previous year. Altogether there were 1,149 seizures and 39 unsuccessful searches in the salt-bearing tracts in Bengal during the year against 1,051 and 57 respectively in the previous year. Of 991 persons apprehended, 841 were convicted. Rewards were disbursed to the amount of Rs. 4,924.

Salt in Orissa.

10. As usual, a separate portion of the Board's report deals with the administration of the Salt Department in Orissa, which continues to be under the immediate control and supervision of the Assistant Commissioner of Salt Revenue, subject to the orders of the Excise Commissioner, Bengal. The salt law in force in this Province during the year was the Indian Salt Act, XII of 1882. The receipts of the Orissa Salt Department amounted to Rs. 1,66,995 against Rs. 46,160 in 1897-98, while the expenditure fell from Rs. 1,15,482 to Rs. 62,641. The increase in receipts, which was mainly confined to the receipts from duty, was due to enhanced sale of the lake salt on account of the reduction in its wholesale price. The decrease in expenditure was due to the new scheme under which the salt establishment employed in Orissa under the Madras Administration underwent considerable reduction, and the surplus was employed in the 24 Parganas. It is anticipated by the Excise Commissioner that the completion of the East Coast Railway will give a great impetus to the trade in Madras *karkatch* as compared with that in Liverpool salt, not only in the Orissa districts, but even so far north as Calcutta. In view of the fact that the highest price of Madras salt per 100 maunds is Rs. 41-11-4 less than the lowest price of Liverpool salt, there can be little doubt that the anticipation will be realised, and that the consumer will receive the benefit of a considerable reduction in the price of salt. A new departure has been made by the establishment of several depôts by an English firm for the sale of salt manufactured by them on English principles in Madras. The salt turned out by them is reported to be equal in quality, and lower in price than Liverpool salt, and may prove a serious competitor to the latter. All this information is of much importance. With every new source of supply the cost of salt to the consumer is steadily decreasing, and the Coast Railway is bringing abundant supplies of a good and cheap article to people who were largely dependent on the inferior stuff made on their shores. The greater the facilities for the distribution of cheap salt and good salt, the smaller become the temptations to illicit manufacture.

General remarks.

11. The following general remarks are offered by the Commissioner of Excise, Bengal, regarding the year's work:—

"The Department is yet far from being properly organised, but yet the results obtained both in Orissa and the 24-Parganas are hopeful and by no means unsatisfactory In the former Province the expenditure has been reduced 38·4 per cent., salt crime has been kept well under control, the receipts from local salt have advanced 261·7 per cent., and consumption has attained the highest figure in many years. In the 24-Parganas, too, where but a small corner has yet been tapped, several successful raids have been made in spite of organised opposition from the people, and consumption has already so far increased that the duty receipts on that account will more than cover the cost of the operations."

12. The thanks of the Government are due to Mr. K. G. Gupta, Commissioner of Excise, Bengal, and the Board of Revenue for their administration of the Department The duties of it are difficult, for discretion is just as necessary as firmness in the application of the law, and all ranks seem to the Lieutenant-Governor to have done their duty well.

By order of the Lieutenant-Governor of Bengal,

E. N. BAKER,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE BOARD OF REVENUE ON THE FINANCIAL RESULTS OF THE ADMINISTRATION OF THE INCOME-TAX DEPARTMENT FOR THE YEAR 1898-99.

FINANCIAL DEPARTMENT—SEPARATE REVENUE.

Dated Calcutta, the 5th September 1899.

RESOLUTION—No. 5107S.R.

READ—

The Report of the Board of Revenue on the Financial results of the Administration of the Income-tax for the year 1898-99.

No change of any importance was effected during the year in the administration of the Income-tax Act.

2. The following statement compares the financial results during the last two years:—

	1897-98.	1898-99.
Number of persons originally assessed, excluding Government servants ...	113,625	115,643
Number of persons finally assessed, excluding Government servants	111,680	113,785
Number of persons finally assessed, including Government servants	121,081	122,978
Number of assessees, including Government servants, who paid tax within the year ...	117,834	119,324
	Rs.	Rs.
Final demand of income tax for the year 1898-99	49,22,207	50,60,501
Final demand of income-tax, including penalties, fines and arrears	51,15,378	52,67,536
Collections of income-tax within the year ...	48,01,512	49,31,568
Gross receipts	49,46,973	50,85,059
Charges	1,88,447	1,90,627
Percentage of charges on receipts ...	3·8	3·7
Net revenue	47,58,526	48,94,432

The net revenue shows an increase of Rs. 1,35,906, or 2·9 per cent., against an increase of ·5 per cent. in the previous year. In other words, in place of the large reduction in the average annual increase which was noted last year, a sensible advance on it has now to be recorded, adding yet another to the many proofs of the prompt return of the Province to prosperity, since the famine of 1896-97, which have been noticed in other branches of the administration. The gross receipts, including advance payments and excess collections, and making allowance for various adjustments, amounted to Rs. 50,85,059, of which Rs. 49,56,352 represent the receipts on account of the current demand for the year.

3. There was an increase in the final demand in all the districts, except the 24-Parganas, Jessore, Darjeeling, Chittagong, Patna, Saran, Monghyr, Sonthal Parganas, Palamau and Singhbhum. The increase is due to agricultural prosperity and to more careful and accurate assessment. The causes assigned for the decrease in districts where it occurred are various, but in no district does the percentage exceed 3·6, except in Singhbhum, which shows a decline of 19·5 per cent. due to some railway contractors and shopkeepers having left the district on the completion of work on the Sini section of the Bengal-Nagpur Railway. In other cases the causes given call for no comment, except in Palamau, where the decrease was attributable to exemptions on revision consequent on careless assessments originally made.

4. *Assessments.*—The number of assessors employed during the year was 50, the same number as in the previous year. The number of villages (a street in Calcutta is held to be village for this purpose) visited by these assessors was 74,519 as against 75,623 during the preceding year, showing a decrease of 1,104.

The most marked decrease (1,038) is in Jessore, and is attributed to neglect of duty on the part of the assessor of which due notice has been taken. The number of persons finally assessed was 113,785 against 111,680, showing an increase of 1·9 per cent. Calcutta again shows the largest increase (724), followed by Faridpur, Shahabad, Midnapore, Khulna, Nadia and Monghyr, with an increase ranging from 288 to 100 persons. A decrease occurred in 15 districts against 21 in the preceding year, but no district shows a reduction of more than 73, except the 24-Parganas, Chittagong, Gaya and Saran, where the decrease ranges from 147 to 107. The decrease in the 24-Parganas (147) is attributed mainly to decline of business in trades where supply of manual labour was assessed during the plague scare. In Gaya it was due to the exemption of a number of assessees who had previously been wrongly included. Enquiry also disclosed considerable under-assessment in the case of the higher class assessees; the result being that in spite of a reduction of 109 in the number of assessees, the final demand was increased by Rs. 2,558.

5. *Demands, Collections and Balances.*—The following statement shows the original demand, the revised demand and the percentage of collections from assessees, exclusive of Government servants:—

Year.	Original number of assessees.	Revised number of assessees.	Original demand.	Final demand after revision.	Amount of final demand collected.	Percentage of final demand collected.
1	2	3	4	5	6	7
			Rs.	Rs.	Rs.	
1897-98 ...	113,625	111,680	45,19,407	44,02,690	42,81,995	97·3
1898-99 ...	115,643	113,785	46,59,.60	45,47,134	44,18,201	97·2

The outstanding balance, including penalties, costs and arrears was Rs. 1,81,239, as against Rs. 1,68,600 in the year 1897-98. Of this balance, Rs. 1,28,322 are reported to be good and under realization, Rs. 17,919 doubtful, and Rs. 34,998 bad and irrecoverable.

6. *Coercive measures.*—The following table compares for the last three years the coercive measures which had to be taken for the realization of the tax:—

Year.	Number of persons finally assessed.	Distress warrants		Distraints.		Sales.	
		No.	Percentage to column 2	No.	Percentage to column 2.	No.	Percentage to column 2.
1	2	3	4	5	6	7	8
1896-97 ...	111,190	4,858	4·4	2,142	1·9	337	·3
1897-98 ...	111,680	5,763	5·2	2,172	1·9	357	·3
1898-99 ...	113,785	5,725	5·03	2,081	1·8	324	·3

The number of distress warrants issued was nearly the same as in the previous year, but the proportion on the number of persons fell from 5·2 in 1897-98 to 5·03 in the year under review.

The proportion of warrants issued to the number of persons assessed was above 10 per cent. in the districts of Jessore (12·2), Shahabad (11·9), Muzaffarpur (10·1), Purnea (10·1), and Bhagalpur (10·09). Jessore and Bhagalpur,

which were also in this category in the previous year, show a slight decrease. As requested in paragraph 6 of last year's Resolution an enquiry has been made into the cause of the consistently high percentage of warrants which had been noticed in certain districts. In Jessore, the most noticeable instance, it is attributed partly to the litigious nature of the people—a characteristic understood to be not peculiar to Jessore—but also to wrong assessments made by an assessor who appears to have become too well acquainted with the district. It will be instructive to see whether the remedy which has since been adopted of transferring the assessor proves effective in reducing the proportion of coercive measures.

The largest number of sales reported was 60 in Rangpur, 28 in Dinajpur, 25 in Purnea, 23 in Mymensingh, 22 in Faridpur, and 20 in Rajshahi. Enquiries which have been made into the sale procedure have disclosed certain defects which are engaging the attention of the Board.

7. *Penalties and costs.*—The demands and realizations under the heads of penalties and costs for the year under review, as compared with the previous year, are shown in the following statement:—

Year.	Penalties.		Costs.	
	Demand.	Realizations.	Demand.	Realizations.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
1897-98 ...	31,454	16,675	12,951	9,573
1898-99 ...	29,532	14,983	13,226	9,324

8. The amount of tax collected during the year under review from companies and other employers, who agreed under section 9 (2) of the Income-tax Act to collect the tax from the salaries of their servants, rose from Rs. 3,19,319 in the previous year to Rs. 3,49,551; while the remission allowed by way of commission to the employers rose from Rs. 10,371 to Rs. 11,017. The number of companies who undertook to collect the tax also rose from 369 to 375. Twelve of them failed to collect the tax, which had to be realized by the District Officers. In Calcutta the number of companies collecting the tax rose from 244 to 251.

9. *Incidence of the tax.*—Excluding the tax on the interest on Government securities and the salaries of Government officials, the average incidence of the tax in the whole Province was Re. 1 to every 15·6 persons, against an average of Re. 1 to every 16 2 persons in the preceding year. Darjeeling still continues to show the highest mufassal average, Re. 1 to every 4 persons, while the incidence was lowest in the Sonthal Parganas, viz., Re. 1 to 75 persons. In Calcutta the average incidence was Re. 1 to every ·4 persons, the same as in the previous year.

Including the taxes recovered by the Accountant-General, Bengal, the incidence was Re. 1 to every 14·06 persons, against Re. 1 to every 14·5 in 1897-98. Outside Calcutta the average incidence was Re. 1 to 31·1 persons.

The proportion of persons assessed for the whole Province was 1 to 625 against 1 to 637 in the preceding year.

In comparing the figures appended to the Report for 1897-98 with those of previous years, the Lieutenant-Governor was struck by the differences between different districts in the incidence of the tax and in the proportion of its increase since 1887-88. The Board were accordingly asked in October last to examine the causes of this, and the Lieutenant-Governor begins to apprehend that there were more grounds for this examination and enquiry than he felt at the time, for the reply of the Board is still awaited by Government.

10. The following statement illustrates for the year under review and previous years the distribution of the income-tax and of the other direct taxes which preceded it, as between Calcutta and the rest of the Province :—

Years.	Act imposing tax.	Number of persons assessed in—			Amount of tax realised in—		
		Calcutta.	Rest of Province.	Total of columns 3 and 4.	Calcutta.	Rest of Province.	Total of columns 6 and 7.
1	2	3	4	5	6	7	8
					Rs.	Rs.	Rs.
1860-61 ...	Income-tax Act, XXXII of 1860	*	241,297	241,297	20,60,061	34,79,428	55,39,489
1861-62 ...	Ditto ditto	*	244,471	244,471	17,83,500	40,68,945	58,52,445

* Figures not available.
† Exclusive of the tax on salaries, &c., recovered by the Accountant-General and the tax on the interest of Government securities.

11. *Expenditure.*—The expenditure incurred in the working of the tax during the year under review rose from Rs. 1,88,447 in the previous year to Rs. 1,90,627. The increase, which occurs under all the different heads of expenditure, except under Collector's establishment, is mainly attributable to the grant of increased pay to peons, increase of establishment in the district of Nadia, which moved up to class II, and the appointment of two additional bailiffs for the Warrant Department of the office of the Collector of Income-tax, Calcutta.

12. *General.*—No new administrative question has arisen during the past year which calls for special comment. The tax, though it naturally cannot be said to advance in popularity, has now ceased to arouse public feeling. Its successful administration must of course ultimately depend on the standard of energy and integrity which prevails among assessors, and on the amount of supervision exercised by the local officers. Over-assessment exposes itself; but under-assessments and omissions can only be gradually remedied by enquiry into the local circumstances prevailing in each particular district. That progress in this matter is being made is shown by the steady and continuous increase in collections since 1887-88.

No case of embezzlement was brought to light during the year. Two persons were prosecuted for personating assessors; one of whom was sentenced on conviction to two years' rigorous imprisonment, while the other was committed to the Sessions. The usual number of petty prosecutions for resisting execution of process were instituted, but call for no remark.

13. The names of the Deputy Collectors specially reported by the Board as having done good service will be communicated to the Appointment Department.

14. In conclusion, the Lieutenant-Governor thanks the Board for their administration of this Department during the year under review.

By order of the Lieutenant-Governor of Bengal,

E. N. BAKER,

Offg. Secy. to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 4th September 1899.

Burdwan.—Rainfall at Sadar 3·50, Kalna 1·14, Katwa 2·06, Raniganj ·93. Weather seasonable. Transplantation of *aman* completed. Weeding going on. Sugarcane, *aus* and other standing crops doing well. Fodder and water sufficient. Cattle-disease in Katwa stationary. Common rice selling as follows :—

	Srs.	
Sadar	18	per rupee.
Kalna	14¾	
Katwa	15 1/16	
Raniganj	15½	

Birbhum.—Rainfall at Sadar 2·70, Rampur Hât 3·41. Weather very hot. More rain wanted. Price of common rice at Sadar and Rampur Hât 15 seers per rupee. Fodder sufficient.

Bankura.—Rainfall at Bankura ·51, Vishnupur ·69. Weather hot and occasionally cloudy. Rain wanted for high lands. Fodder and water sufficient. No cattle-disease reported. Rice selling at Sadar 17½ seers and at Vishnupur 17 seers per rupee.

Midnapore.—Rainfall at Sadar ·86, Contai 5·39, Tamluk 3·06, Ghatal 1·54. *Aus* paddy is being reaped; outturn good. Transplantation of winter paddy continues. Prospects very good except in parts which were inundated. Cattle-disease and grasshoppers reported from some places in the Sadar subdivision. Common rice sells as follows :—

	Srs.	CH.	
Sadar	16	0	per rupee.
Contai	15	0	
Tamluk	14	3½	
Ghatal	17	0	

Hooghly.—Rainfall at Sadar ·32, Serampore 3·62, Jahanabad 1·05. In certain low lands transplantation of *aman* is reported to be continuing. Prospects of sugarcane and jute moderate. Common rice sells at 14 seers 6 chitaks per rupee.

Howrah.—Rainfall at Sadar 2·22, Ulubaria 1·21. Weather hot and cloudy. Transplantation of *aman* still going on. Harvesting of *aus* continues. Jute and sugarcane doing well. Fodder and water sufficient. Common rice sells at 13¾ seers per rupee.

24-Parganas.—Rainfall at Sadar 1·82, Barasat 2·83, Basirhat 1·21, Diamond Harbour 7·78. Weather hot and cloudy with occasional rain. Transplantation of *aman*, cutting and steeping of jute, and harvesting of *aus* going on briskly. Heavy rainfall in Diamond Harbour during the week did some damage to newly-transplanted paddy on low lands. Cattle-disease reported from the Sadar subdivision. Fodder and water sufficient. Common rice sells as follows :—

	Srs.	CH.	
Sadar	12 to 14	0	per rupee.
Barasat	15	0	
Basirhat	16	0	
Diamond Harbour	12	5	

Nadia.—Rainfall at Sadar 2·36, Kushtia 1·26, Meherpur 1·03, Chuadanga ·54, Ranaghat 1·23. Weather seasonable. Harvesting of *aus* nearly over with an average outturn of 80 per cent. Fodder and water sufficient. Price of common rice stationary.

Murshidabad.—Rainfall at Sadar 2·61, Kandi 3·12, Jangipur 4·94. Weather cloudy and hot. Harvesting of *bhadoi* and cutting of jute continue. Paddy plants and mulberry doing well. Paddy partially damaged in Gowas police-station. Fodder insufficient in Daulatabad police-station. Water sufficient. Common rice sells as follows :—

	Srs.	
Sadar	14	per rupee.
Kandi	17	
Jangipur	15	

Jessore.—Rainfall at Sadar 1·33, Jhenida ·96, Magura 1·87, Narail 2·40, Bangaon 3·20. Weather seasonable. Harvesting of *aus* paddy going on. Prospects good. Rivers are going down. Cattle-disease reported. Common rice sells as follows:—

	Srs.	
Sadar	16⅔	per rupee.
Jhenida	16	
Magura	18	
Narail	17	
Bangaon	17	

Khulna.—Rainfall at Sadar 1·57, Bagerhat 1·93, Satkhira ·97. Weather hot with occasional rain. Transplantation of *aman* and harvesting of *aus* going on. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16¾	per rupee.
Bagerhat	17	
Satkhira	15	

Rajshahi.—Rainfall at Sadar 3·05, Nator ·62, Naugaon 2·16. Prospects of crops fair. Harvesting of *aus* and steeping of jute in progress. No cattle-disease. Fodder and water sufficient. Common rice selling at 17½ seers per rupee.

Dinajpur.—Average rainfall 2·59. Weather seasonable. Standing crops good. No cattle-disease. Fodder and water sufficient. Rice selling at 17 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 4·25, Alipur Duars 5·85. Weather seasonable. Transplanting of *haimanti* paddy and steeping of jute rapidly going on. Harvesting of *bhadoi* paddy nearly finished. Fodder and water ample. Price of common rice 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 4·68, Kalimpong 5·04, Siliguri 4·72. Weather seasonable. *Hills*—*Kalai* and *phaphar* being sown; *bhutta*, *bhadoi* paddy, *chota* and *bara marua*, and *haimanti* paddy progressing well. *Terai*—Jute and *bhadoi* being cut; *haimanti* paddy being transplanted; sugarcane doing well. Coarse rice sells as follows:—

	Srs.	
Hills	10½	per rupee.
Terai	16	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 7·66, Gaibanda 2·53, Nilphamari 8·30. Weather rainy. Steeping of jute and transplantation of winter rice in progress. Prospects good. Common rice selling at 18 seers 10 chitaks per rupee. Fodder and water sufficient.

Bogra.—Average rainfall ·97. Harvesting of *aus* nearly finished. Steeping of jute and transplantation of *aman* still going on. Prospects good. Fodder and water ample. Common rice selling at 17 seers per rupee.

Pabna.—Rainfall at Sadar 2·34, Sirajganj 2·27. Weather cloudy and rainy. Prospects good. Harvesting of *aus* paddy complete; yield moderate. Price of common rice 14¾ seers per rupee.

Dacca.—Rainfall at Sadar 1·72, Manikganj 2·96, Munshiganj 2·58, Narainganj 3·28. Weather seasonable. Prospects of standing crops good. Fodder available. No cattle-disease. Common rice 17 seers per rupee.

Mymensingh.—Rainfall at Sadar 7·52, Tangail ·31, Kishorganj 3·72, Jamalpur 2·50, Netrokona 8·15. Frequent heavy showers. Prospects of crops good. Condition of people and cattle good. Fodder andwater ample. Common rice sells at Sadar 20 seers, Tangail 17½ seers, and Netrokona 22 seers per rupee.

Faridpur.—Rainfall at Sadar 1·28, Goalundo 1·60, Madaripur ·22. Weather seasonable. State and prospects of crops good. Common rice sells at 17 seers per rupee.

Backergunge.—Rainfall at Sadar 3·61. Weather seasonable. Prospects of crops fair. Common rice sells at 15 seers (*aman*) and 18 seers (*aus*) per rupee.

Tippera.—Rainfall at Sadar 2·74, Brahmanbaria 3·44, Chandpur 1·97. Weather cloudy with light showers. Jute harvest goes on; *aus* harvest nearly over. Rice being transplanted on high lands. Prospects of *aman* continue favourable. Average price of common rice 18 seers per rupee.

Noakhali.—Rainfall at Sadar 7·21, Feni 9·63. Transplantation of *aman* and harvesting of *aus* continue. Cattle-disease reported from Chagalnaya. Water sufficient. Fodder less good than usual. Common rice (*aman*) 16 seers and (*aus*) 18 seers per rupee.

Chittagong.—Rainfall 5·12. Weather seasonable. *Aman* transplanting progressing. Reaping of *aus* continues. Prospects fair. Water and fodder sufficient. Common rice 15 seers per rupee.

Patna.—Rainfall at Sadar ·83, Dinapore ·93, Barh ·78, Bikram ·36, Barh ·53, Hilsa ·45. Transplantation of paddy nearly finished. Prospects of *bhadoi* crops unfavourable. *Makai* very poor. *Marua* being reaped. Condition of cattle fair. Fodder and water for cattle sufficient. Common rice in Patna sells at 15½ seers per rupee.

Gaya.—Rainfall at Sadar ·67, Jahanabad ·74, Aurangabad 2·68, Nawada ·55. Transplantation of paddy approaching completion. *Marua* being harvested. Common rice selling at 14½ seers per rupee.

Shahabad.—Rainfall at Sadar ·84, Buxar 2·74, Bhabua 3·46, Sasaram 2·76. Paddy transplanting progressing. 134 cases of cattle-disease reported in Sasaram. Fodder and water abundant.

Saran.—Rainfall at Sadar 2·74, Siwan 3·56, Gopalganj 3·14. Weather warm. Paddy transplantation still continues, and high land paddy doing well. Drier weather is doing good. Average price of common rice 13·8 seers and of *makai* 18·8 seers per rupee.

Champaran.—Rainfall at Motihari 2·37, Bettiah 4·28, Barharwa 5·91, Bagaha 2·17, Ramnagar 1·93. Early paddy and a little of *bhadoi* being harvested. Transplantation of *aghani* paddy practically over and prospect is good. Price of common rice 13½ seers and of maize 21 seers per rupee.

Muzaffarpur.—Rainfall at Sadar ·83, Hajipur 3·23, Sitamarhi 2·88. Transplantation of rice nearly completed. Prices are—Common rice 12 seers, wheat 15 seers, barley 20 seers, *makai* 18 seers, gram 19 seers, and *rahar* 20 seers per rupee.

Darbhanga.—Rainfall at Sadar 1·55, Samastipur 1·13, Madhubani 5·99. Weather hot and cloudy with occasional showers. Transplantation of paddy is still in progress. Fodder and water sufficient. No cattle-disease reported. Common rice sell as follows:—

	Srs.	Ch.	
Sadar	12	0	per rupee.
Samastipur	13	0	
Madhubani	12	6	

Monghyr.—Rainfall at Monghyr 1·04, Begusarai 5·18, Jamui 3·28. Weather hot and bright with occasional showers. Transplantation of winter rice nearly over. *Sama* and *makai* being harvested in places. Sowing of *mirchi* continues. Outturn of *bhadoi* very poor. Common rice sells as follows:—

	Srs.	Ch.	
Sadar	11	10	per rupee.
Begusarai	12	0	
Jamui	13	8	

Bhagalpur.—Rainfall at Sadar 2·44, Banka ·90, Madhipura 2·70, Supaul 2·92. Weather seasonable. Harvesting of *bhadoi* commenced; outturn poor. Transplantation of winter rice almost completed; prospects good. Cattle-disease reported from some villages in Madhipura, Banka and Supaul. Prices stationary.

Purnea.—Rainfall at Sadar 3·69, Kishanganj 1·94, Araria 2·23. Weather seasonable. Harvesting of *bhadoi* rice and jute continues. *Aghani* rice being transplanted. Prospects good. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	15	per rupee.
Kishanganj	15	
Araria	21 (new *aus*)	

Malda.—Rainfall at Sadar 2·09, Gajol 2·63. Shibganj 1·18. Weather hot and cloudy. Transplantation of winter rice finished. Harvesting of *bhadoi* paddy still going on. Price of coarse rice 17 seers a rupee. Fodder sufficient.

Sonthal Parganas.—Weather hot and showery. Indian-corn poor. Prospects of paddy good. Cattle-disease reported from Dumka, Godda, and Rajmahal, and glanders from Dumka. Fodder and water sufficient. Average price of common rice 13 seers 6 chitaks and of Indian-corn 18 seers per rupee.

Cuttack.—Rainfall at Sadar 1·40, Jajpur 5·07, Kendrapara 1·43, Banki 2·08. Weather seasonable and hot. *Sarad*, jute, *haldia* cotton, and sugarcane growing. *Beali* being cut. It is being damaged by insects in places. Rain wanted. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

				S.	ch.	
Cuttack	...	...	...	15	12	} per rupee.
Jajpur	...	...	...	17	1	
Banki	...	...	...	16	13	

Balasore.—Rainfall at Sadar ·82. Weather hot. Weeding and transplanting of *sarad* continue. *Beali* being reaped in places. Sugarcane thriving well. Prospects of *sarad* good. Rice sells at 18¾ seers per rupee in the interior, and at 17 and 18 seers per rupee at Balasore and Bhadrak respectively. Cattle-disease reported from places. Fodder and water sufficient.

Angul.—Rainfall at Angul ·84, Bisipara 3·02. Good rain in the interior. Weather hot and cloudy. More rain expected. Puddling in Angul and transplantation in both the subdivisions in progress. More rain wanted in Angul. Harvesting of *bhadoi* crops commenced. Common rice selling at 20 seers per rupee in Angul and 12 seers in Khondmals.

Puri.—Rainfall at Sadar 3·06, Khurda ·47. Weeding, puddling, and transplantation of *sarad* going on. Insufficiency of rain keenly felt in many places. *Beali* and *mandia* being cut. Fodder sufficient. Insect-pests causing damage to *sarad* and *beali* in some parts. Cattle-disease continues in some places. Common rice sells as follows:—

				S.	ch.	
Sadar	...	...	...	15	12	} per rupee.
Khurda	...	...	...	17	1	
Interior of the district		...	...	16	0	

Hazaribagh.—Rainfall at Sadar ·31, Giridih 1·82. Weather hot. More rain wanted. Common rice sells at 14¼ seers per rupee.

Ranchi.—Rainfall ·68. Weather hot. Prospects good so far, but more rain seriously wanted. Rice sells at Ranchi 16 seers per rupee, and in the interior 18 seers. No cattle-disease. Fodder and water sufficient.

Palamau.—Rainfall ·57. Weather not seasonable. More rain wanted for rice crop. *Sawan* and *gondli* being harvested. Other crops doing well. Rice selling at Sadar 14 seers per rupee.

Manbhum.—Rainfall at Sadar 1·53, Gobindpur 2·02. Weather seasonable. *Bhadoi* crops fair. Winter rice generally good. Cattle-disease reported from thanas Manbazar and Topchanchi. Fodder and water sufficient. Average price of common rice at Sadar 16 seers 9 chitaks and Gobindpur 14 seers per rupee. Supply sufficient.

Singhbhum.—Rainfall 3·91. Prospects good. Common rice sells at 17 seers 7 chitaks per rupee.

General Summary.—The rain during the week was moderate in amount, but general in its distribution. The transplantation of winter rice is being rapidly completed, and the reports of the crop are generally good. More rain is, however, still required in Puri and Angul and in the Chota Nagpur Division. Some slight damage by insects is reported from Cuttack and Puri. Early rice is being harvested. Jute is being cut and steeped. The *bhadoi* harvest in Bihar is yielding a poor outturn, as was expected. The price of common rice has fallen in some districts, but on the whole it is practically stationary.

		%
The mean relative humidity		86
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office		85
		Inches.
The total fall of rain from 27th August to 2nd September 1899		1·90
The average fall of the corresponding period for 24 years, Surveyor-General's Office		2·14
The total fall from 1st January to 2nd September 1899		60·23
The average fall of the corresponding period for 24 years, Surveyor-General's Office		48·93

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; ≏, dew.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 4th September 1899.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE ORISSA PORTS FOR THE YEAR 1898-99.

No. 1730Marine.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

Dated Calcutta, the 7th September 1899.

RESOLUTION.

READ—

The Administration Report of the Orissa Ports for the year 1898-99.

The following statement shows the receipts of the year under review, as compared with those of the preceding year:—

PARTICULARS.	1897-98.	1898-99.	Increase.	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Port dues on vessels	2,242	3,841	1,599	...
Ditto mail steamers	14,271	14,964	693	...
Miscellaneous	251	99	...	152
Government contribution	12,500	...	...	12,500
Total receipts ...	29,264	18,904	...	10,360

The large decrease is due to no Government contribution having been made during the year.

2. The expenditure during the year, as compared with that of the previous year, is shown in the subjoined table:—

Particulars.	1897-98.	1898-99.	Increase.	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
Establishment	10,731	8,148	...	2,583
Light-house establishment	4,758	4,114	...	644
Vessels and boats establishment ...	1,850	1,736	...	114
Dockyard services and supplies ...	9,406	5,292	...	4,114
Miscellaneous	488	370	...	118
Other charges	1,344	3,185	1,841	...
Total charges ...	28,577	22,845	...	5,732

3. The expenditure shows a decrease as compared with that of the previous year. The principal decreases are under the heads "Establishment" and "Dockyard services and supplies." In False Point the decrease was chiefly due to the fact that Mr. Howard, the Port Officer, who has been appointed Assistant Port Officer of Chittagong, did not draw his pay for February 1899. In Balasore the decrease under the head "Dockyard services and supplies" is stated to be due to the fact that the Port Officer, Chandbally, has received instructions to prepare indents of stores for the port on a reduced scale.

4. The following table shows the number and tonnage of vessels that entered and cleared during the year, as compared with those of the preceding year:—

Year.	Entered.		Cleared.	
	Number.	Tonnage.	Number.	Tonnage.
1	2	3	4	5
False Point ... 1897-98	36	70,943	36	70,943
False Point ... 1898-99	44	82,186	44	82,186
Balasore ... 1897-98	408	1,01,620	420	1,07,919
Balasore ... 1898-99	364	91,697	356	89,803
Puri 1897-98	17	27,464	17	27,464
Puri 1898-99	26	36,531	26	36,531

Four hundred and thirty-four vessels in all entered the ports during the year, of which 357 were steamers, and all of these were engaged in the coasting trade. Of the 77 sailing vessels, 7 were engaged in the foreign and 70 in the coasting trade.

5. The following figures show the value of the trade of the ports during the years 1897-98 and 1898-99:—

	Private trade.		Government stores.		Total.	
	1897-98.	1898-99.	1897-98.	1898-99.	1897-98.	1898-99.
1	2	3	4	5	6	7
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Exports	96,40,028	76,38,849	4,900	1,339	96,44,928	76,40,188
Imports	79,83,983	96,40,897	1,62,778	4,56,597	81,46,761	1,00,97,494
Total ...	1,76,24,011	1,72,79,746	1,67,678	4,57,936	1,77,91,689	1,77,37,682

The total value of the trade of the ports shows a decrease during the year under review of Rs. 1,63,404, as compared with the year 1897-98. In False Point, the decrease is ascribed to the lower price of rice exported to foreign ports; while in Balasore it is stated to be due to less rice having been exported to coasting ports.

6. A steamer service was regularly maintained between Calcutta and Chandbally by the India General Steam Navigation Company and Messrs. MacNeill and Company. Communication between Chandbally and Balasore was kept up throughout the year.

By order of the Lieutenant-Governor of Bengal,

R. B. BUCKLEY,

Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONER FOR BENGAL ON THE WORKING OF THE VACCINATION DEPARTMENT DURING THE THREE YEARS 1896-1899.

MUNICIPAL DEPARTMENT—SANITATION.

Calcutta, the 8th September 1899.

RESOLUTION—No. 45538.

READ—

The Report of the Sanitary Commissioner for Bengal on the working of the Vaccination Department during the three years 1896-1899.

THE report, which was due to Government on 15th June, was not received until the 8th of August. Major Dyson has, however, been severely handicapped during the past year by pressure of plague work and the want of Deputy Sanitary Commissioners, and the Lieutenant-Governor accepts this as sufficient excuse for the delay.

During the greater part of 1897-98 and 1898-99 the work of superintending the Metropolitan and Northern Bengal Circles was thrown upon Major Dyson in addition to his other duties, while the Western Circle was in charge of an Assistant Surgeon for the greater part of the period under review.

2. *Strength of staff.*—The following table shows the strength of the establishment during the period under review as compared with the three preceding years:—

	Years.	Inspecting staff.						Operators.				Total number of operators.
		Number of Superintendents.	Number of Deputy Superintendents.	Number of Inspectors.	Number of Sub-Inspectors.	Number of Head Vaccinators.	Total number of Inspecting staff.	Vaccinators.		Apprentices.

* Includes 7 head vaccinators of Angul whose services were dispensed with after the 15th May 1897.
† Includes 73 paid vaccinators of Angul ditto ditto.

The large decrease in the staff paid by Government is due to the substitution of licensed for paid agency in Angul and to the employment of fewer paid vaccinators in Puri. The number of operations performed by each paid vaccinator rose from 678 in 1893-96 to 720. In the agency employed by District Boards there was an increase of five vaccinators only; but the work done shows decided improvement, the average number of operations per man having risen by no less than 232. In municipal agency there was a decrease of 36 vaccinators and of 3,473 operations, giving an average per man of 481 against 437 in the previous triennial period.

3. *Operations.*—The total number of operations performed was 2,293,655 in 1896-97, 2,319,536 in 1897-98, and 2,147,452 in 1898-99, giving an increase for the triennial average, as compared with that of the preceding period, of 155,053.

In 1898-99 the six-puncture system of vaccination was introduced, and the novelty, being unfortunately synchronous with the plague inoculation scare, appears to have been generally regarded as indicating some sinister intention on the part of Government. Consequently there was a decrease in the number of operations for the year as compared with the previous year which extended to 34 out of 49 districts. The general increase, however, in the triennial average is satisfactory and shows that progress is being made. It extends to 33 districts out of 49 as against a decrease in 16. The Lieutenant-Governor is inclined to ascribe the instances of decrease not so much to the special causes noted by the Civil Surgeons as to the defects in the constitution of the vaccinating staff, on which the Sanitary Commissioner remarks in another part of his report, and to the want of effective supervision. The advantages of vaccination are, except in Orissa, believed to be very fairly recognised by the people of Bengal, and the conscientious objector is consequently not a factor to be seriously reckoned with. Such passive opposition to vaccination as does exist, originates partly, no doubt, in natural impatience of Government interference in family matters, but principally in a reluctance to pay the fees demanded for the operation, which again is consistent with other experiences of domestic life. If the operators are compelled to devote time to realising their fees, which would otherwise be spent in operating, there is of course diminished outturn. To establish, however, a system of paid vaccinators is beyond the resources of this province, and there is in the alternative system of licensed vaccinators an advantage of its own, which gave it a preponderating weight with the administrators of Bengal. When the vaccinators have to support themselves on the fees they have to recover, there is a powerful stimulus to thoroughly good, careful, and tactful work, and the improvement which can be attained under these conditions, by increased diligence and attention, is illustrated this year by several instances; and particularly by the case of Gaya, to the backwardness of which attention was specially called in last year's Resolution. Its figures for 1898-99 show an increase on the previous year of no less than 11,000. The Lieutenant-Governor, has also to admit that the progress of the department was seriously hampered by the absence of proper assistance to the Sanitary Commissioner. War and plague made so great a drain on the medical service that throughout nearly the whole of this triennial period, it was impossible to attach to the Sanitary Commissioner a single Deputy. This defect it is hoped to remedy next winter.

The districts which show the most noticeable increase in the triennial average are Cuttack (26,568), Backergunge (25,881), Mymensingh (15,311), Balasore (14,367), Gaya (12,627), and Patna (11,541). The largest decreases are in Angul (11,057), Noakhali (8,449), and Dacca (8,083). There can be little doubt that the large decrease in Angul is due, not to the stereotyped explanation given by the Civil Surgeon that the number of available subjects for vaccination is no longer sufficient to maintain the previous standard, but to the wilful slackness of the newly-introduced licensed vaccinators, which was noticed by the Sanitary Commissioner in last year's report. With regard to Dacca and Noakhali, it is to be regretted that work among the Ferazi Muhammadans has not been up to the level of the previous years. The same explanation is offered as in the case of Angul, but its incorrectness is exposed by the figures given in another portion of the report, which show that in each case there has been a diminution in the proportion of infant vaccinations to the number of births recorded.

4. *Protection afforded to infants.*—For the purpose of comparison the Sanitary Commissioner gives a table showing the proportion of infants successfully vaccinated in 1898-99 as compared with 1895-96, the year previous to the period under review. Taking the estimated births at 40 per cent. of the population shown in the census of 1891, and deducting the recorded deaths among infants under one year of age, the result arrived at for the whole Province is that 203·88 infants per mille were successfully vaccinated as

against 169·19 in 1895-96. The increase is satisfactory, but would be still more so if it were accompanied by a levelling up of the striking differences between the percentages of different districts which were commented on by Government in their Resolution last year. These differences range from a proportion of 856·55 per mille in Malda to one of 24·29 in Puri, and emphasise the conclusion drawn in the preceding paragraph that there is a very wide difference between the amount of attention given to vaccination in different districts. Of districts which have been previously noticed as exceptionally backward, the increase in Gaya from 37·72 to 227·07 is particularly noticeable, while Patna, which in 1895-96 was at the bottom of the list with 26·52, has risen to 85·27. The average in Puri is, however, the lowest on record, and the improvement in Shahabad is trifling. The backwardness of vaccination in Puri has attracted the special attention of the Sanitary Commissioner, and he has arrived at very radical conclusions which must be separately discussed. In the meantime the opening of a training school for vaccinators at Cuttack, should be undertaken as soon as possible, and the Commissioner will be asked to use his influence with the Chiefs of the Tributary States to entertain trained and respectable men. As regards the other backward districts of the Province, Sir John Woodburn would call the special attention of the Civil Surgeons concerned to the example of Gaya; and hopes that in the near future a more uniformly high average may be attained.

It may be noted that in compiling this table an average birth rate of 40 per mille has been assumed. In the Sanitary Report the accepted estimate of 50 per mille has been taken as the basis of calculation throughout, and it would be as well for the sake of uniformity if that estimate were adopted for the future in the Vaccination Report also.

5. *Primary operations.*—There was an increase of 130,006 primary vaccinations during the period under review as compared with the previous triennial period. The percentage of successful operations is given as 97·92 as against 98·29. The Sanitary Commissioner, however, ascribes this high ratio to the habitual falsification of returns by vaccinators, who include even absolute failures as successful cases; and points out that this practice can only be put a stop to by stricter supervision on the part of Civil Surgeons and the inspecting staff. The system of six-puncture vaccination has, in spite of considerable opposition, which has not yet altogether ceased, been generally introduced into the Province, and satisfactory results are now being obtained. It is hoped that the existing prejudice against it, which has no doubt been due to the plague inoculation scare, will in a short time vanish altogether.

6. *Revaccinations.*—The average number of revaccinations increased from 43,998 in the preceding period to 69,045, and the ratio of successful operations rose from 36·99 to 61·22. The increase in numbers is satisfactory, but the high ratio of successful cases must be regarded with suspicion.

7. *Recess work.*—The average number of operations performed during the recess rose from 110,541 in the previous period to 113,601. The average in Calcutta has, however, declined by almost one-half, the explanation given being that extensive recess operations were rendered unnecessary by the absence of small-pox in an epidemic form.

8. *Cost of vaccination.*—There has been a continuous decrease in the cost of vaccination, the average annual expenditure having fallen from Rs. 1,94,966 to Rs. 1,87,186, and the cost of each successful operation from Re. 0-1-6 to Re. 0-1-4.

The saving has been effected by the absence of Deputy Sanitary Commissioners during the greater part of 1897-98 and 1898-99 and by the reduction in the number of paid vaccinators.

9. *Protection from small-pox.*—The usual diagrams are appended showing side by side the death-rate from small-pox, district by district, for each of the three years under review, and the degree of protection afforded by vaccination during the seven preceding years. With a view to arriving at more definite conclusions as to the actual effect of vaccination on the death-rate, the Sanitary Commissioner has prepared a detailed statement comparing the death-rate from small-pox since the introduction of vaccination in five districts chosen at random with that during the five preceding years.

Both sets of figures, however, while interesting, are inconclusive in detail. The diagrams naturally do not render it possible to lay down any hard-and-fast rule by which the amount of protection afforded by vaccination can be disclosed. The fortuitous occurrence of a small-pox epidemic among the unprotected would alone disturb any conclusion. For instance, the three consecutive districts of Jalpaiguri, Rungpore, and Bogra reached in the seven years ending 1899 almost precisely the same measure of protection, 180 per mille, but the ratio of deaths from small-pox in that period was 0·00 in Jalpaiguri; 0·13 in Rungpore; 1·01 in Bogra. The first district entirely escaped the epidemic among the unprotected majority, which was severe in the third, and more lightly felt in the second.

In the five selected districts the result generally, except in Saran, has been the reduction of small-pox mortality by a half. It is quite possible that this reduction is more accidental than real, for in not one of the five districts is the ratio of protection among the population particularly high. But, after all, this is the real test by which the department must be eventually judged, its success in checking the mortality from small-pox. Every year increases the area of its protection; every year increases the width of its statistics and the confidence with which inferences can be drawn from them; and in future at least, every triennial report should present an opportunity for a full and thorough examination of facts for encouragement or instruction, as the case may be. A striking feature in the diagrams is the position of Puri and Cuttack—the districts constantly noted as the hotbed of opposition to vaccination in Bengal. During the last six years Puri has shown the highest mortality in Bengal three times, the second once, and the fourth once, while Cuttack has held the first place twice, the second twice, and the fourth and fifth once each. Similarly, the districts of Patna, Gaya, and Shahabad, to the backwardness of which in vaccination, attention has often been drawn, show, with a corresponding regularity, a high mortality from small-pox. It should be noted that the pre-vaccination figures date back to a period when death registration was extremely defective, and it may fairly be assumed that vaccination has had a considerably greater effect in reducing the mortality than that shown by the present figures.

10. *Vaccination direct from the calf.*—In the triennial report for the years 1893-96, great stress was laid by Major Dyson on the importance of introducing this method of vaccination throughout the Province. As is naturally the case in India with novelties of this nature, difficulties were at first experienced, but the anticipation of Major Dyson that these difficulties would, by tact and judicious perseverance, be gradually overcome, is, it is satisfactory to see, in a fair way to be realised. Major Dyson is to be congratulated on the successful introduction of this important reform.

11. *Inspections.*—Owing to the impossibility already noticed of continuously retaining Deputy Sanitary Commissioners in the three circles into which the Province is divided, comparatively little inspection work has been done by these officers during the period under review. In the Government Resolution on the Vaccination Report for 1897-98, attention was drawn to the extraordinarily large number of villages shown as having been inspected by some Civil Surgeons. On enquiry it has been ascertained that this was due to the Civil Surgeon having in some cases ordered the Inspectors and Sub-Inspectors of Vaccination to collect the vaccinated children at several villages, at a particular spot for inspection, thereby rendering it possible to return a large number of villages as having been inspected by him. Under ordinary circumstances this is a most objectionable practice, for it enables subordinates to set the seal of superior authority upon any concealment of deficiencies which a genuine inspection would have disclosed. But the Sanitary Commissioner asserts that under his orders his vaccinators maintain a nominal record of all vaccinations and of the cicatrices of all successful punctures. When the six-puncture system is in general operation, this plan may afford sufficient check, but, while making all excuse for the hard-worked Civil Surgeon, the Lieutenant-Governor is sorry to see that the practice of assembling children at centres has been meanwhile so frequent.

The Sanitary Commissioner notices the great variation in the number of inspections performed by the subordinate inspecting staff, and remarks that, in the case of Inspectors and Sub-Inspectors of Vaccination, inspection of less

than 30 and 50 per cent., respectively, of the operations in their jurisdiction is inexcusable. The attention of the Civil Surgeons should be drawn to this matter. Admitting the correctness of the Sanitary Commissioner's conclusion that the return of so high a ratio as 97·92 per cent. of successful operations is incorrect, it would seem that inspection, as at present performed, is not an efficient check on it. In the cases seen by Inspectors and Sub-Inspectors, this ratio is in the majority of cases equalled or exceeded, while in only one district, Singhbhum, has inspection disclosed results considerably below it. In that district the proportion of successful cases to the number inspected by the Civil Surgeon, the Inspectors and the Sub-Inspectors was 87·72, 88·89, and 79·13, respectively. It would be interesting to know if this result is due to greater care and efficiency in inspection or to any special cause.

The Lieutenant-Governor thanks Major Dyson for his work during the year. It was carried on at high pressure under many disadvantages, but there was notable improvement in some of the worst districts. It is on these that his attention must be concentrated, and the Lieutenant-Governor trusts that next winter he may be able, with a full staff of assistants, to advance this useful work still further.

By order of the Lieutenant-Governor of Bengal,

E. N. BAKER,

Offg. Secretary to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 11th September 1899.

Burdwan.—No rain. Weather fair and hot. Harvesting of *aus* commenced. Rain wanted for *aman*. Steeping of jute and weeding of *aman* going on. Sugarcane doing well. Fodder and water sufficient. Cattle-disease in Katwa slightly increased. Common rice selling as follows :—

	Srs.	
Sadar	17	per rupee.
Kalna	14½	
Katwa	15 1/16	
Raniganj	15	

Birbhum.—Rainfall at Sadar nil, Rampur Hât ·13. Weather hot. More rain wanted. Price of common rice at Sadar and Rampur Hât 15 seers per rupee. Fodder sufficient.

Bankura.—No rain. Weather fair and unusually hot for the season. Rain badly wanted Fodder and water sufficient. No cattle-disease reported. Rice selling at 16 seers a rupee both at Bankura and Vishnupur.

Midnapore.—Rainfall only at Tamluk ·95. Reaping of *aus* paddy going on. Winter paddy still being transplanted. Prospects very good. Cattle-disease and grass-hoppers reported from some places. Common rice selling as follows :—

	Srs.	CH.	
Sadar	16	0	per rupee.
Contai	15	0	
Tamluk	14	3½	
Ghatal	17	0	

Hoogh'y.—No rain. Harvesting of *aus* paddy continues. State of standing crops fair. Common rice sells at 14 seers 3 chitaks per rupee.

Howrah.—No rain at Sadar, Ulubaria ·09. Weather hot. Transplantation of *aman* going on. Harvesting of *aus* continues. Jute and sugarcane doing well. Fodder and water sufficient. Common rice sells at 13¾ seers per rupee.

24-Parganas.—Rainfall at Sadar ·13, at other stations nil. Weather hot and cloudy. Prospects of *aman* fair except in low lands in Barasat and Diamond Harbour. Transplantation of *aman* still continues. *Aus* being cut and jute steeped. Cattle-disease reported from Hasanabad police-station. Fodder and water sufficient. Common rice sells as follows :—

	Srs.	
Sadar	13	per rupee.
Barasat	15	
Basirhat	16	
Diamond Harbour	12 5/16	

Nadia.—Rainfall at Sadar nil, Kushtia 1·00, Meherpur nil, Chuadanga nil, Ranaghat ·08. Weather seasonable. Harvesting of *aus* almost over. Fodder and water sufficient. Common rice sells as follows :—

	Srs.	
Sadar	16	per rupee.
Kushtia	16	
Meherpur	14½	
Chuadanga	14½	
Ranaghat	13	

Murshidabad.—Rainfall at Sadar ·41, Jangipur ·50, Kandi ·64. Weather cloudy and hot. Harvesting of *bhadoi* still continues. Paddy plants, mulberry and jute doing well. Fodder insufficient in Daulatabad police-station. Water sufficient. No cattle-disease. Common rice sells as follows :—

	Srs.	
Sadar	14	per rupee.
Jangipur	15	
Kandi	18	

Jessore.—Rainfall at Sadar ·15, Jhenida ·62, Magura 3·45, Narail 1·56, Bangaon nil. Weather seasonable. Prospects of crops good. Harvesting of *aus* paddy and jute going on. Cultivation for winter crops has commenced. Rivers receding. No cattle-disease reported. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16½	per rupee.
Jhenida	16	
Magura	18¾	
Narail	17	
Bangaon	17	

Khulna.—Rainfall at Sadar 1·11, Bagerhat ·47, Satkhira ·10. Weather hot with slight rain. Transplantation of *aman* and harvesting of *aus* going on. Fodder and water sufficient. Common rice sells as follows:—

	Srs.	
Sadar	16¾	per rupee.
Bagerhat	16	
Satkhira	15	

Rajshahi.—Rainfall at Sadar ·79, Nator 1·00, Naugaon 3·59. Weather [illegible]. Prospects of crops fair. Harvesting of *bhadoi* going on. No cattle-disease. Fodder and water available. Common rice sells at 17½ seers per rupee.

Dinajpur.—Average rainfall 3·75. Weather seasonable. Standing crops good. No cattle-disease. Fodder and water sufficient. Rice selling at 17 seers per rupee.

Jalpaiguri.—Rainfall at Sadar 9·64, Alipur Duars 4·52. Weather seasonable. Transplantation of *haimanti* paddy and cutting and steeping of jute going on. Harvesting of *bhadoi* paddy nearly finished. Fodder and water sufficient. Common rice sells at 14 seers per rupee.

Darjeeling.—Rainfall at Darjeeling 5·83, Siliguri 3·83. Weather seasonable. *Hills*—*Haimanti* and *bhadoi* paddy, *chota* and *bara marua*, *kalai* and *phaphar* doing well. *Terai*—*Bhadoi* and jute nearly cut; *haimanti* paddy being transplanted; sugarcane doing well. Coarse rice sells as follows:—

	Srs.	
Hills	10	per rupee.
Terai	16	

Bhutta sells at Darjeeling 25 seers and at Kalimpong 40 seers per rupee.

Rangpur.—Rainfall at Sadar 5·71, Kurigram 3·82, Nilphamari 8·52. Weather hot and cloudy. Transplantation of winter rice and steeping of jute going on. Prospects good. Common rice selling at 17 seers 9 chitaks per rupee. Fodder and water sufficient.

Bogra.—Average rainfall 2·75. Harvesting of *aus* finished. Steeping of jute and transplanting of *aman* nearly finished. Prospects good. Fodder and water ample. Common rice selling at 17 seers per rupee.

Pabna.—Rainfall at Sadar ·50, Sirajganj 2·48. Weather cloudy and rainy. Prospects of crops good. Common rice sells at 15 seers 5½ chitacks per rupee.

Dacca.—Rainfall at Sadar 2·43, Manikganj 2·39, Munshiganj 3·50, Narainganj 2·49. Weather seasonable. Prospects of standing crops good. Fodder available. No cattle-disease. Price of common rice stationary.

Mymensingh.—Rainfall at Sadar 2·82, Jamalpur 3·80, Kishorganj 5·91, Tangail 3·98, Netrokona 9·03. Weather stormy. Prospects of crops good. Condition of people and cattle good. Common rice 18 seers per rupee at Sadar, Kishorganj and Tangail, and 15 seers per rupee at Jamalpur and Netrokona. Fodder and water sufficient.

Faridpur.—Rainfall at Sadar 4·65, Goalundo 4·55, Madaripur 2·67. Weather seasonable. State and prospects of crops good. Common rice sells at 17 seers per rupee.

Backergunge.—Rainfall at Sadar 2·01. Weather seasonable. Prospects of crops fair. Common rice sells at 15 seers (*aman*) and 18 seers (*aus*) per rupee.

Tippera.—Rainfall at Sadar 6·40, Brahmanbaria 3·30, Chandpur 2·10. Weather seasonable. *Aus* harvest nearly over. Jute cutting progresses. Prospects continue favourable. Average price of common rice 18 seers per rupee.

Noakhali.—Rainfall at Sadar 4·86, Feni 4·93. Prospects of crops fair. Harvesting of *aus* and transplantation of *aman* continue. Fodder and water good. A veterinary assistant has come to treat cattle-disease at Chagalnaya. Common rice (*aman*) 16 seers and (*aus*) 19 seers per rupee.

Chittagong.—Rainfall 2·91. Weather seasonable. *Aman* transplanting progressing. Reaping of *aus* nearly finished. Prospects fair. Water and fodder sufficient. Common rice 14 seers per rupee.

Patna.—Rainfall nil. Transplantation of paddy finished. Rain urgently required now. Outturn of *makai* very poor. Fodder and water for cattle sufficient. Common rice in Patna sells at 14 seers per rupee.

Gaya.—Rainfall at Sadar ·05. Transplantation of paddy completed. Harvesting of *bhadoi* paddy and *mandua* going on. Common rice selling at 14 seers per rupee.

Shahabad.—Rainfall nil. Paddy prosperous. Lands being prepared for *rabi*. Fodder and water abundant; 149 cases of cattle-disease in Sasaram.

Saran.—Rainfall at Gopalganj ·26. Weather hot. Transplantation of paddy nearly finished. In places fields being prepared for *rabi*. Paddy prospects better. Average price of common rice 13·10 seers and of *makai* 17·11 seers per rupee.

Champaran.—Rainfall at Motihari ·37, Bagaha ·54, Ramnagar ·17. *Bhadoi* paddy, *makai*, *mandua* and *kodo* are being harvested. Prospects of *aghani* good. Common rice and maize selling at 15½ and 20 seers per rupee respectively.

Muzaffarpur.—Rainfall at Sadar ·80. Rice crop, which has escaped any damage, is doing well. It is being retransplanted in low lands where practicable. Prices are—Common rice 12 seers, wheat 15 seers, barley 20 seers, *makai* 18 seers, gram 19 seers, *rahar* 20 seers, and *marua* 20 seers per rupee.

Darbhanga.—Rainfall at Sadar 2·78, Samastipur ·63, Madhubani 1·04. Weather hot and bright with occasional showers. Transplantation of paddy is still in progress. Prospects good. Fodder and water sufficient. No cattle-disease reported. Common rice sells as follows:—

				Srs.	
Sadar	...	...	...	12	per rupee.
Samastipur	...	...	...	13⅓	
Madhubani	...	...	...	12⅜	

Monghyr.—Rainfall at Monghyr ·76, Begusarai ·13, Jamui nil. Weather hot. Prospects of paddy and sugarcane good. Sowing of *kurthi*, *kalai* and castor seeds commenced. Common rice sells as follows:—

				Srs.	Ch.	
Monghyr	...	...	...	11	9	per rupee.
Begusarai	...	...	...	12	0	
Jamui	...	...	...	13	8	

Bhagalpur.—Weather hot and close. Rainfall at Sadar ·03, Banka 1·12, Madhipura 1·78. Harvesting of *bhadoi* continues. Winter rice and sugarcane doing well. Cattle-disease reported from Banka, Katoria, and Madhipura thanas. Fodder and water sufficient. Prices stationary.

Purnea.—Rainfall at Sadar 3·65, Kishanganj 4·40, Araria ·34. Weather seasonable. Harvesting of *bhadoi* paddy going on briskly. Transplantation of *aghani* rice and steeping of jute still going on. Very little cattle-disease. Fodder and water sufficient. Common rice sells as follows:—

				Srs.	
Sadar	...	...	...	16	per rupee.
Kishanganj	...	...	...	15	
Araria	...	...	...	21	

Malda.—Rainfall at Sadar ·51, Chanchal 2·43, Gajol ·46, Shibganj 1·22. Weather hot and cloudy. Prospects of winter paddy good. Harvesting of *bhadoi* paddy completed. Price of coarse rice 17 seers per rupee. Fodder ample.

Sonthal Parganas.—Average rainfall ·35. Weather hot and cloudless. More rain wanted for high land paddy. *Makai* being reaped; average not more than six annas. Ploughing for *rabi* crops progressing. Cattle-disease reported from Rajmahal. Fodder and water sufficient. Average price of common rice 13 seers 6 chitaks and of *makai* 18 seers 5 chitaks per rupee.

Cuttack.—Rainfall at Kendrapara ·14, Banki ·01. Weather seasonable and hot. *Sarad*, jute, *haldia* cotton, and *arhar* are growing. *Beali* being cut. Crops being damaged by insects in places. Rain wanted. Condition of cattle generally good. Fodder and water sufficient. Common rice sells as follows:—

		S.	Ch.	
Cuttack	... ...	15	1	per rupee.
Jajpur	... ...	17	1	
Kendrapara	... ...	21	0	
Banki	... ...	15	12	

Balasore.—Rainfall at Sadar 1·20. Weeding and transplanting of *sarad* continue. *Asu* is being reaped in places. Sugarcane thriving well. Prospects of *sarad* good in the Sadar subdivision. More rain wanted in the Bhadrak sub-division. Rice sells at 18¾ seers per rupee in the interior, and at 17 and 18 seers at Balasore and Bhadrak respectively. Cattle-disease reported from places. Fodder sufficient.

Angul.—Rainfall at Angul nil, Bisipara ·71. Local showers reported from some places in the interior. Weather hot and dry. Clouds passing over daily. Rain urgently wanted. Upland paddy and late *aus* paddy suffering. Lowland paddy doing tolerably. Harvesting of early *bhadoi* crops going on. Sowing of *biri* and winter *til* are in progress, but in some places retarded for want of rain. Paddy loans being withheld by dealers. In the Khondmals the prospects of the lately transplanted winter paddy have become bad for want of sufficient rain. Coarse rice selling at 20 seers per rupee in Angul and 12 seers in Khondmals.

Puri.—Rainfall at Sadar ·52, Khurda ·40. Weather hot and cloudy. Weeding, puddling, and transplantation of *sarad* continue. Insufficiency of rain badly felt throughout the district. *Beali* and *mandia* being cut. Insect-pests causing damage in some parts. Condition of sugarcane and miscellaneous crops good. Cattle-disease reported from some places. Fodder sufficient. Common rice sells at Sadar 15¾ seers and in the interior 15 seers 10 chitaks per rupee.

Hazaribagh.—Rainfall at Sadar ·17, Giridih nil. Weather cloudy. Prospects so far good, but more rain seriously wanted. Common rice sells at 13 seers per rupee.

Ranchi.—Rainfall ·16. Weather very hot and dry during the week, now cloudy and wet. Prospects improved by rain yesterday (10th) and to-day (11th), but only moderate. Much more rain wanted. Rice sells at Ranchi 14 seers, and in the interior 19 seers per rupee. No cattle-disease. Fodder and water sufficient.

Palamau.—No rain. Weather not seasonable. Rain urgently wanted for rice crop. Sugarcane doing well. *Sawan* and *gondli* being harvested. Rice sells at Sadar 14 seers per rupee.

Manbhum.—Rainfall at Sadar ·05. Weather hot. *Bhadoi* crops fair. Winter rice has suffered from want of rain, but it is raining to-day (11th). Average crop expected. Cattle-disease reported from thanas Gobindpur, Nirsa, Topchanchi, and Tundi. Fodder and water sufficient. Average price of common rice at Sadar 15 seers 9 chitaks and at Gobindpur 13 seers per rupee. Supply sufficient.

Singhbhum.—Rainfall ·08. *Goradhan* is being reaped; its yield is bad owing to deficient rain in July and August. The prospect of winter paddy is excellent, but rain is badly needed. Common rice sells at 17 seers 3 chitaks per rupee.

General Summary.—Good general rain fell during the week in North and East Bengal. Prospects of the winter rice crop continue generally good except in Angul and Puri, where the rainfall is still very deficient. More rain is also required in the Chota Nagpur Division and the west of the Burdwan Division. The harvesting of the autumn crops and jute is going on, and the preparation of lands for the *rabi* crops has begun. Sugarcane is generally doing well. The price of common rice is reported to have risen in some districts. Fodder-supply is sufficient, and cattle are generally in good condition.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACK,

Offg. Secretary to the Govt. of Bengal.

REVENUE DEPARTMENT,
The 12th September 1899.

IMPORTS INTO CALCUTTA.

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interior by Rail, Road, River (Country-boat and Steamer) and Canal during the month of May 1899.

Whence imported.	FOOD-GRAINS.							FIBROUS PRODUCTS.		OILSEEDS.		Tea, Indian.	Cotton, raw.	Silk, raw.	Coal and coke.	Indigo.	SUGAR.		TOBACCO.
